# Contents

*Part One:* *Basic Concepts and Techniques*

**Chapter 1** **Introduction** **1**
1.1 Brief History 2
1.2 The Linear Programming Problem 4
1.3 The MC Linear Programming Problem 6
1.4 The $MC^2$ Linear Programming Problem 8
1.5 Further Remarks 10
Exercises 12

**Chapter 2** **Basic Techniques of Linear Programming** **19**
2.1 Formulation of Linear Programming 19
2.2 Graphical Method for Two Dimension Problems 23
2.3 Simplex Method and Computer Solution Procedure 29
2.4 Duality Theory and Its Economic Interpretation 35
2.5 Complementary Slackness 38
2.6 Sensitivity Analyses 40
2.6.1 The Change in The Objective Vector **c** 40
2.6.2 The Change in The Constraint Level Vector **d** 41
2.7 Complexity Analyses and Other Methods 42
2.7.1 Basic Concepts of Computational Complexity 42
2.7.2 Complexity of Simplex Method 43
2.7.3 Khachian's Ellipsoid Method 44
2.7.4 Karmarkar's Projective Method 44
2.8 Further Remarks 45
Exercises 46

**Chapter 3** **Relationships between LP, MC, and $MC^2$ Problems** **48**
3.1 Framework of MC Linear Programming 48
3.2 Matrix Optimization 54
3.3 Relationship Theory 57
3.4 Extension Based on Application Perspective 62
3.4.1 Two Roots 62
3.4.2 Potential Application Fields 63
3.5 Further Remarks 65
Exercises 66

| | | |
|---|---|---|
| **Chapter 4** | **$MC^2$ Linear Programming** | **68** |
| 4.1 | Formulation of $MC^2$ Linear Programming | 68 |
| 4.2 | Concepts of Potential Solutions | 70 |
| 4.3 | $MC^2$ Simplex Pivoting | 71 |
| 4.4 | Potential Solution Structure | 74 |
| 4.5 | $MC^2$ Simplex Method | 78 |
| 4.6 | $MC^2$ Duality | 84 |
| 4.7 | $MC^2$ Computer Software | 88 |
| | 4.7.1 A Man-machine Interactive Software | 88 |
| | 4.7.2 A File Input-output Software | 89 |
| 4.8 | Further Remarks | 91 |
| | Exercises | 91 |

***Part Two:*** ***Special $MC^2$ Problems***

| | | |
|---|---|---|
| **Chapter 5** | **$MC^2$ Integer Problems** | **93** |
| 5.1 | Integer Potential Solutions | 94 |
| 5.2 | $MC^2$ Zero-One Problem and A Branch-and-Bound Procedure | 96 |
| 5.3 | General $MC^2$ Integer Problem and A Branch-and-Partition Procedure | 107 |
| 5.4 | Computer Software for $MC^2$ Integer Problem | 116 |
| 5.5 | Further Remarks | 117 |
| | Exercises | 118 |
| **Chapter 6** | **$MC^2$ Transportation Problems** | **120** |
| 6.1 | A Steady $MC^2$ Transportation Problem | 121 |
| 6.2 | An Algorithm for the Steady $MC^2$ Transportation Model | 126 |
| 6.3 | A Dynamic $MC^2$ Transportation Problem | 139 |
| 6.4 | An Algorithm for the Dynamic $MC^2$ Transportation Model | 143 |
| 6.5 | Computer Software for $MC^2$ Transportation Problem | 159 |
| 6.6 | Further Remarks | 161 |
| | Exercises | 162 |

*Part Three:* *Fuzzy MC² Solutions*

**Chapter 7** **Fuzzy MC² Problems** **166**
7.1 Fuzzy Potential Solutions 167
7.2 Special Fuzzy Potential Solutions 184
7.3 Further Remarks 191
Exercises 192

**Chapter 8** **Duality of Fuzzy MC² Problems** **194**
8.1 A Constructive Approach to Fuzzy MC² Duality 194
8.2 A Parametric Approach to Fuzzy MC² Duality 207
8.3 Further Remarks 217
Exercises 218

*Part Four:* *Optimal Linear Designs*

**Chapter 9** **Optimal System Designs and Contingency Plans** **220**
9.1 A General Procedure of Designing Optimal Systems 221
9.2 Primal Rigid Designs and Contingency Plans 224
9.2.1 Finding Primal Rigid Contingency Plans 224
9.2.2 Analysis of External Resource Price 234
9.3 Primal Flexible Designs and Contingency Plans 237
9.4 Further Remarks 242
Exercises 243

**Chapter 10** **Generalized Good System and Contingency Plans** **244**
10.1 Generating New Designs Using Union Operations 244
10.2 Finding Primal Rigid Contingency Plans for Generalized Good Systems 256
10.3 Finding Primal Flexible Contingency Plans for Generalized Good Systems 264
10.4 Further Remarks 265
Exercises 265

**Chapter 11 Optimal System Designs and Dual Contingency Plans 266**
11.1 Optimal System Design and Dual Rigid Contingency Plans 266
11.2 Optimal System Design and Dual Flexible Contingency Plans 281
11.3 Further Remarks 295
Exercises 295

**Chapter 12 Generalized Good Systems and Dual Contingency Plans with Computer Aided System 296**
12.1 Finding Dual Rigid Contingency Plans for Generalized Good Systems 296
12.2 Finding Dual Flexible Contingency Plans for Generalized Good Systems 299
12.3 A Computer-Aided System for Optimal System Designs 301
12.3.1 Modeling Relationships 302
12.3.2 A Solution Procedure for CAS 303
12.3.3 Flowcharts of the Algorithm 305
12.3.4 A Top-Down Design 306
12.3.5 A Pseudo-Language Program 311
12.4 Further Remarks 313
Exercises 313

***Part Five: Related Approaches***

**Chapter 13 Satisficing and Compromise Models 315**
13.1 Satisficing Models 316
13.1.1 Goal Setting 317
13.1.2 Satisficing Model and its Interactive Methods 319
13.2 Compromise Models 326
13.2.1 Regret Functions and Compromise Solutions 326
13.2.2 Computing Compromise Solutions 331
13.2.2.1 The Ideal Point as the Target Point 331
13.2.2.2 General Target Points and Goal Programming 333
13.2.3 Interactive Methods of Compromise Methods 337
13.3 Further Remarks 340
Exercises 340

**Chapter 14 De Novo Programming with Multiple Criteria 342**
14.1 Optimum-path Ratios 343
14.1.1 A Model of De Novo Programming 343
14.1.2 Several Optimum-path Ratios in De Novo Programming 344
14.1.3 An Optimal Pattern Matching Problem 350
14.2 De Novo Design for Multiple Decision Makers and Possible Debt 354
14.2.1 A Model of System Designs with Multi-Decision Makers and Possible Debt 355
14.2.2 Contingency Plans and De Novo Optimal System Design 356
14.3 Further Remarks 368
Exercises 368

**Chapter 15 Eliminating Permanently Dominated Opportunity 370**
15.1 Eliminating Permanently Dominated Opportunities for the Subset of $\Gamma \times \Lambda$ 371
15.2 Eliminating Permanently Dominated Opportunities for the Entire Space of Parameters 378
15.3 Eliminating Techniques for Multiple Criteria Linear Programming Problems 383
15.4 Further Remarks 388
Exercises 388

***Part Six: Applications***

**Chapter 16 Optimal Trade-off Analysis in Transfer Pricing 390**
16.1 Existing Transfer Pricing Models 391
16.2 Multiple Factor Transfer Pricing Model 392
16.3 Model Implications 395
16.3.1 Numerical Example 395
16.3.2 Optimal Trade-offs and Their Accounting Implications 400
16.4 Further Remarks 406

**Chapter 17 Capital Budgeting with Multiple Criteria and Multiple Decision Makers 407**
17.1 Background of Capital Budgeting 408
17.2 AHP Framework 410
17.3 A Model of Multi-Criteria and Multiple Decision Makers Capital Budgeting 410
17.4 Model Implications 414
17.4.1 Numerical Example 414
17.4.2 Managerial Implications 419
17.5 Further Remarks 420
Appendix 420

**Chapter 18 Data File Allocations 424**
18.1 File Allocations Via Wide Area Networks 426
18.2 Zero-One Compromise Model 430
18.3 A Sample Distributed Information System 433
18.4 Further Remarks 438

**Chapter 19 Rural Telecommunications System 440**
19.1 Needs for Rural Telecommunications 441
19.2 A Compromise Model 442
19.3 Nebraska as A Case Study 446
19.4 Further Remarks 452
Appendix 452

**Chapter 20 Credit Card Portfolio Management 454**
20.1 Methodology for Credit Card Portfolio Decisions 455
20.2 Computational Experience and MCLP Model Performance 458
20.3 Main Research Findings and Further Research 460
Appendix 461

**Chapter 21 Aggregate Production Planning 464**
21.1 A Model of Aggregate Production Planning with Multiple Factors 466
21.2 Optimal Trade-offs and Management Implications 468
21.3 Further Remarks 477

**Chapter 22 Agricultural Policy Making** **478**
22.1 Agricultural Policy Making 479
22.2 Multiple Criteria and Multiple Economic Situation Model 481
22.2.1 Formulation of MCMES Model 481
22.2.2 Model Implications 485
22.3 Illustrative Example 487
22.4 Concluding Remarks 493

**Bibliography** **494**

**Index for References** **509**

**Index for Subjects** **513**
