# Contents

*Preface* vii

1. Systems of Ordinary Differential Equations 1

1.1 Basic Definitions and Theorems . . . . . 1
1.1.1 Fields of directions and their integral curves . . . . . 1
1.1.2 Vector fields, differential equations, integral and phase curves . . . . . 1
1.1.3 Theorems of existence and uniqueness of solutions . 3
1.1.4 Differentiable dependence of solutions from initial conditions and parameters, the equations in variations 4
1.1.5 Dissipative and conservative systems of differential equations . . . . . 5
1.1.6 Numerical methods for solution of systems of ordinary differential equations . . . . . 6
1.1.7 Ill-posedness of numerical methods in solution of systems of ordinary differential equations . . . . . 7
1.2 Singular Points and Their Invariant Manifolds . . . . . 8
1.2.1 Singular points of systems of ordinary differential equations . . . . . 8
1.2.2 Stability of singular points and stationary solutions . 9
1.2.3 Invariant manifolds . . . . . 11
1.2.4 Singular points of linear vector fields . . . . . 13
1.2.5 Separatrices of singular points, homoclinic and heteroclinic trajectories, separatrix contours . . . . . 15
1.3 Periodic and Nonperiodic Solutions, Limit Cycles and Invariant Tori . . . . . 17

1.3.1 Periodic solutions . . . . . 17
1.3.2 Limit cycles . . . . . 17
1.3.3 Poincare map . . . . . 20
1.3.4 Invariant tori . . . . . 23
1.3.5 Nonperiodic solutions, Lyapunov exponents . . . . . 25
1.4 Attractors of Dissipative Systems of Ordinary Differential Equations . . . . . 30
1.4.1 Basic definitions . . . . . 30
1.4.2 Classical regular attractors of dissipative systems of ordinary differential equations . . . . . 32
1.4.3 Classical irregular attractors of dissipative dynamical systems . . . . . 34
1.4.4 Dimension of attractors, fractals . . . . . 41

2. Bifurcations in Nonlinear Systems of Ordinary Differential Equations 45

2.1 Structural Stability and Bifurcations . . . . . 45
2.1.1 Structural stability . . . . . 45
2.1.2 Bifurcations . . . . . 47
2.2 One-Parametrical Local Bifurcations . . . . . 50
2.2.1 Bifurcations of stable singular points . . . . . 50
2.2.1.1 Transcritical (exchange of stability) bifurcation 51
2.2.1.2 Saddle–node bifurcation . . . . . 51
2.2.1.3 Pitchfork type bifurcation . . . . . 52
2.2.1.4 Andronov–Hopf bifurcation (cycle birth bifurcation) . . . . . 54
2.2.2 Bifurcations of stable limit cycles . . . . . 57
2.2.2.1 Bifurcation of birth of a pair of stable closed trajectories . . . . . 60
2.2.2.2 Transcritical (exchange of stability between cycles) bifurcation . . . . . 62
2.2.2.3 Bifurcation of disappearance (appearance) of a pair of closed trajectories . . . . . 63
2.2.2.4 Bifurcation of birth (destruction) of two-dimensional torus . . . . . 65
2.2.2.5 Period doubling bifurcation of a cycle . . . . 68
2.2.3 Bifurcations of stable two-dimensional tori . . . . . 71
2.2.3.1 Bifurcation of birth of pair of stable two-dimensional tori . . . . . 72

2.2.3.2 Transcritical (exchange of stability between tori) bifurcation . . . . . 73
2.2.3.3 Bifurcation of disappearance (appearance) of a pair of two-dimensional tori . . . . . 73
2.2.3.4 Bifurcation of birth (destruction) of three-dimensional torus . . . . . 74
2.2.3.5 Period doubling bifurcation of two-dimensional torus . . . . . 74
2.3 The Simplest Two-Parametrical Local Bifurcations . . . . . 75
2.3.1 The normal form of a fold . . . . . 76
2.3.2 The normal form of an assembly . . . . . 77
2.4 Nonlocal Bifurcations . . . . . 79
2.4.1 Bifurcations of homoclinic separatrix contours . . . . 79
2.4.1.1 Separatrix loop of a saddle type singular point 79
2.4.1.2 Separatrix loop of a degenerate two-dimensional saddle–node . . . . . 80
2.4.1.3 Separatrix loop of a saddle–node . . . . . 81
2.4.1.4 Separatrix loop of a degenerate saddle–node 81
2.4.1.5 Homoclinic butterfly . . . . . 82
2.4.1.6 Separatrix loop of a saddle–focus . . . . . 83
2.4.1.7 Separatrix loop of a singular saddle cycle . . 87
2.4.2 Bifurcations of heteroclinic separatrix contours . . . 88
2.4.2.1 Separatrix going from a saddle into a saddle 88
2.4.2.2 Separatrix contour connecting a saddle–node with a saddle–focus . . . . . 89
2.4.2.3 Separatrix contour connecting a saddle–focus with a saddle–focus . . . . . 90
2.4.2.4 Point–cycle bifurcation . . . . . 90
2.4.3 Approximate method for finding bifurcation points of separatrix contours of singular points . . . . . 92
2.4.3.1 Heteroclinic contours of saddle–nodes and saddle–focuses . . . . . 92
2.4.3.2 Homoclinic separatrix loop of a saddle–focus 95
2.4.3.3 Homoclinic separatrix loop of a saddle–node 96
2.4.4 Cascades of bifurcations, scenarios of transition to chaos 98
2.4.4.1 Cascade of period doubling bifurcations, Feigenbaum scenario . . . . . 98
2.4.4.2 Subharmonic cascade of bifurcations of stable cycles, Sharkovskii scenario . . . . . 99

2.4.4.3 Homoclinic cascade of bifurcations, Magnitskii scenario . . . . . 101
2.4.4.4 Subharmonic cascade of bifurcations of stable two-dimensional tori . . . . . 102
2.4.4.5 Cascade of Andronov–Hopf bifurcations, scenarios of Landau and Ruelle–Takens. . . . . 102
2.4.4.6 Transition to chaos through an intermittency, the Pomeau–Manneville scenario . . . 103
2.4.5 Bifurcations of irregular (singular) attractors . . . . 104
2.4.5.1 Bifurcation of formation of a regular attractor (a stable cycle) . . . . . 105
2.4.5.2 Bifurcation of formation of a regular attractor (a stable torus) . . . . . 105
2.4.5.3 Bifurcation of formation of singular attractor 106
2.4.5.4 Bifurcation of coherence . . . . . 106
2.4.5.5 Bifurcation of unification of singular attractors 106

3. Chaotic Systems of Ordinary Differential Equations 107

3.1 System of the Lorenz Equations . . . . . 107
3.1.1 Classical scenario of birth of the Lorenz attractor . . 107
3.1.2 Scenario of birth of the Lorenz attractor through an incomplete double homoclinic cascade of bifurcations 110
3.1.2.1 Method for investigating the Lorenz attractor 111
3.1.2.2 Scenario of transition to chaos . . . . . 117
3.1.3 Scenario of birth of a complete double homoclinic attractor in the Lorenz system . . . . . 127
3.1.4 Bifurcations of homoclinic and heteroclinic contours in the Lorenz system . . . . . 141
3.1.4.1 Heteroclinic contours connecting the saddle–node with the saddle–focus . . . . . 141
3.1.4.2 Homoclinic saddle–focus separatrix loop . . 144
3.1.4.3 Homoclinic saddle–node separatrix loop . . 147
3.1.4.4 Heteroclinic contour connecting saddle–node with two saddle–focuses . . . . . 150
3.1.5 Diagrams of nonlocal bifurcations in the Lorenz system 150
3.2 The Complex System of Lorenz Equations . . . . . 152
3.2.1 Scenario of transition to chaos . . . . . 155
3.3 Systems of the Rossler Equations . . . . . 159
3.4 The Chua System . . . . . 164

3.5 Other Chaotic Systems of Ordinary Differential Equations . 170
3.5.1 The Vallis systems . . . . . 170
3.5.2 The Rikitaki system . . . . . 179
3.5.3 The "Simple" system . . . . . 183
3.5.4 The Rabinovich–Fabrikant system . . . . . 187
3.6 Final Remarks and Conclusions . . . . . 190

4. Principles of the Theory of Dynamical Chaos in Dissipative Systems of Ordinary Differential Equations 191

4.1 Theory of One-Dimensional Smooth Mappings . . . . . 193
4.1.1 Monotonic invertible mappings . . . . . 195
4.1.2 Nonmonotonic mappings . . . . . 199
4.2 Feigenbaum Cascade of Period Doubling Bifurcations of Cycles of One-Dimensional Mappings . . . . . 200
4.2.1 Logistic mapping . . . . . 200
4.2.2 Period doubling operator . . . . . 204
4.2.3 Feigenbaum universality . . . . . 207
4.2.4 Dimension of the Feigenbaum attractor . . . . . 212
4.3 Sharkovskii Subharmonic Cascade of Bifurcations of Cycles of One-Dimensional Mappings . . . . . 213
4.3.1 The Sharkovskii's theorem . . . . . 213
4.3.2 Behind the Feigenbaum cascade . . . . . 222
4.4 Dynamical Chaos in Two-Dimensional Non-Autonomous Systems of Differential Equations . . . . . 223
4.4.1 Rotor type singular points . . . . . 224
4.4.2 Scenario of transition to chaos . . . . . 227
4.4.3 Dynamical chaos in some classical two-dimensional non-autonomous systems . . . . . 231
4.4.3.1 The Duffing–Holmes equation . . . . . 231
4.4.3.2 The Matie equation . . . . . 233
4.4.3.3 The Croquette equation . . . . . 234
4.4.3.4 The Krasnoschekov equation . . . . . 235
4.5 Dynamical Chaos in Three-Dimensional Autonomous Systems of Differential Equations . . . . . 237
4.5.1 Singular cycles of three-dimensional autonomous systems . . . . . 238
4.5.2 Singular attractors of three-dimensional autonomous systems . . . . . 242

4.5.3 Some examples of three-dimensional autonomous systems with singular attractors . . . . . 249
4.6 Final Remarks and Conclusions . . . . . 259

5. Dynamical Chaos in Infinite-Dimensional Systems of Differential Equations 261

5.1 Regular Dynamics and Diffusion Chaos in Reaction–Diffusion Systems . . . . . 262
5.1.1 Turing and Andronov–Hopf bifurcations in the Brusselator model . . . . . 263
5.1.2 Diffusion chaos for the Brusselator in a ring . . . . . 267
5.1.3 Diffusion chaos in the Brusselator on a segment . . . 269
5.2 Transition to Spatio-Temporal Chaos in the Kuramoto–Tsuzuki Equation . . . . . 271
5.2.1 Scenario of transition to chaos in system of few-mode approximations . . . . . 273
5.2.2 Transition to chaos in the space of Fourier coefficients 278
5.2.3 Scenario of transition to chaos in the phase space of the Kuramoto–Tsuzuki equation . . . . . 281
5.3 Dynamical Chaos in Differential Equations with Delay Argument . . . . . 287
5.4 Cycles and Chaos in Distributed Economic Systems . . . . 291
5.4.1 Description of the model of self-developing market economy . . . . . 291
5.4.2 Behavior of macroeconomic variables . . . . . 299
5.4.3 Behavior of economic variables in the presence of diffusion of capital and consumer demand . . . . . 304

6. Chaos Control in Systems of Differential Equations 309

6.1 Ott–Grebogi–Yorke and Pyragas methods . . . . . 310
6.1.1 The OGY-method . . . . . 311
6.1.2 The Pyragas method . . . . . 312
6.2 The Magnitskii Method . . . . . 313
6.2.1 Localization and stabilization of unstable fixed points and unstable cycles of chaotic mappings . . . . . 314
6.2.1.1 Case of one-dimensional mapping . . . . . 316
6.2.1.2 Case of two-dimensional mapping . . . . . 318

6.2.2 Localization and stabilization of unstable fixed points of chaotic dynamical systems . . . . . 321
6.2.3 Localization and stabilization of unstable cycles of chaotic dynamical systems . . . . . 324
6.2.4 Chaos control in equations with delay argument . . . 330
6.2.5 Stabilization of a thermodynamic branch in reaction–diffusion systems of equations . . . . . 337
6.3 Reconstruction of Dynamical System on Trajectory of Irregular Attractor . . . . . 347
