|--|-----|
| <i>Preface</i> | vii |
| 1. Introduction to Steady State Bifurcation Theory | 1 |
| 1.1 Implicit Function Theorem | 1 |
| 1.2 Basics of Topological Degree Theory | 2 |
| 1.2.1 Brouwer degree | 2 |
| 1.2.2 Basic theorems of Brouwer degree | 4 |
| 1.2.3 Leray–Schauder degree | 5 |
| 1.2.4 Indices of isolated singularities | 7 |
| 1.3 Lyapunov–Schmidt Method | 8 |
| 1.3.1 Preliminaries | 8 |
| 1.3.2 Lyapunov–Schmidt procedure | 9 |
| 1.3.3 Normalization | 12 |
| 1.4 Krasnosel’ski Bifurcation Theorems | 13 |
| 1.4.1 Bifurcation from eigenvalues with odd multiplicity | 13 |
| 1.4.2 Krasnosel’ski theorem for potential operators | 14 |
| 1.5 Rabinowitz Global Bifurcation Theorem | 17 |
| 1.6 Notes | 19 |
| 2. Introduction to Dynamic Bifurcation | 21 |
| 2.1 Motivation | 21 |
| 2.2 Semi-groups of Linear Operators | 23 |
| 2.2.1 Introduction | 23 |
| 2.2.2 Strongly continuous semi-groups | 25 |
| 2.2.3 Sectorial operators and analytic semi-groups | 26 |
| 2.2.4 Powers of linear operators | 28 |

| | | |
|-------|--|-----|
| 2.3 | Dissipative Dynamical Systems | 29 |
| 2.4 | Center Manifold Theorems | 32 |
| 2.4.1 | Center and stable manifolds in \mathbb{R}^n | 32 |
| 2.4.2 | Center manifolds for infinite dimensional systems | 34 |
| 2.4.3 | Construction of center manifolds | 37 |
| 2.5 | Hopf Bifurcation | 38 |
| 2.6 | Notes | 40 |
| 3. | Reduction Procedures and Stability | 41 |
| 3.1 | Spectrum Theory of Linear Completely Continuous Fields | 41 |
| 3.1.1 | Eigenvalues of linear completely continuous fields | 41 |
| 3.1.2 | Spectral theorems | 44 |
| 3.1.3 | Asymptotic properties of eigenvalues | 50 |
| 3.1.4 | Generic properties | 53 |
| 3.2 | Reduction Methods | 56 |
| 3.2.1 | Reduction procedures | 56 |
| 3.2.2 | Morse index of nondegenerate singular points | 62 |
| 3.3 | Asymptotic Stability at Critical States | 66 |
| 3.3.1 | Introduction to the Lyapunov stability | 66 |
| 3.3.2 | Finite dimensional cases | 67 |
| 3.3.3 | An alternative principle for stability | 70 |
| 3.3.4 | Dimension reduction | 72 |
| 3.4 | Notes | 74 |
| 4. | Steady State Bifurcations | 75 |
| 4.1 | Bifurcations from Higher-Order Nondegenerate Singularities | 75 |
| 4.1.1 | Even-order nondegenerate singularities | 75 |
| 4.1.2 | Bifurcation at geometric simple eigenvalues: $r = 1$ | 83 |
| 4.1.3 | Bifurcation with $r = k = 2$ | 85 |
| 4.1.4 | Reduction to potential operators | 90 |
| 4.2 | Alternative Method | 92 |
| 4.2.1 | Introduction | 92 |
| 4.2.2 | Alternative bifurcation theorems | 94 |
| 4.2.3 | General principle | 98 |
| 4.3 | Bifurcation from Homogeneous Terms | 100 |
| 4.4 | Notes | 103 |
| 5. | Dynamic Bifurcation Theory: Finite Dimensional Case | 105 |

| | | |
|-------|---|-----|
| 5.1 | Introduction | 105 |
| 5.1.1 | Pendulum in a symmetric magnetic field | 105 |
| 5.1.2 | Business cycles for Kaldor's model | 110 |
| 5.1.3 | Basic principle of attractor bifurcation | 112 |
| 5.2 | Attractor Bifurcation | 114 |
| 5.2.1 | Main theorems | 114 |
| 5.2.2 | Stability of attractors | 116 |
| 5.2.3 | Proof of Theorems 5.2 and 5.3 | 119 |
| 5.2.4 | Structure of bifurcated attractors | 123 |
| 5.2.5 | Generalized Hopf bifurcation | 127 |
| 5.3 | Invariant Closed Manifolds | 129 |
| 5.3.1 | Hyperbolic invariant manifolds | 129 |
| 5.3.2 | S^1 attractor bifurcation | 132 |
| 5.4 | Stability of Dynamic Bifurcation | 138 |
| 5.5 | Notes | 149 |
| 6. | Dynamic Bifurcation Theory: Infinite Dimensional Case | 151 |
| 6.1 | Attractor Bifurcation | 152 |
| 6.1.1 | Equations with first-order in time | 152 |
| 6.1.2 | Equations with second-order in time | 154 |
| 6.2 | Bifurcation from Simple Eigenvalues | 160 |
| 6.2.1 | Structure of dynamic bifurcation | 160 |
| 6.2.2 | Saddle-node bifurcation | 163 |
| 6.3 | Bifurcation from Eigenvalues with Multiplicity Two | 165 |
| 6.3.1 | An index formula | 165 |
| 6.3.2 | Main theorems | 169 |
| 6.3.3 | Proof of main theorems | 172 |
| 6.3.4 | Case where $k \geq 3$ | 184 |
| 6.3.5 | Bifurcation to periodic solutions | 184 |
| 6.4 | Stability for Perturbed Systems | 188 |
| 6.4.1 | General case | 188 |
| 6.4.2 | Perturbation at simple eigenvalues | 191 |
| 6.5 | Notes | 194 |
| 7. | Bifurcations for Nonlinear Elliptic Equations | 197 |
| 7.1 | Preliminaries | 197 |
| 7.1.1 | Sobolev spaces | 197 |
| 7.1.2 | Regularity estimates | 200 |

| | | |
|-------|--|-----|
| 7.1.3 | Maximum principle | 201 |
| 7.2 | Bifurcation of Semilinear Elliptic Equations | 202 |
| 7.2.1 | Transcritical bifurcations | 202 |
| 7.2.2 | Saddle-node bifurcation | 207 |
| 7.3 | Bifurcation from Homogenous Terms | 209 |
| 7.3.1 | Superlinear case | 209 |
| 7.3.2 | Sublinear case | 210 |
| 7.4 | Bifurcation of Positive Solutions of Second Order Elliptic Equations | 213 |
| 7.4.1 | Bifurcation in exponent parameter | 214 |
| 7.4.2 | Local bifurcation | 222 |
| 7.4.3 | Global bifurcation from the sublinear terms | 231 |
| 7.4.4 | Global bifurcation from the linear terms. | 236 |
| 7.5 | Notes | 240 |
| 8. | Reaction-Diffusion Equations | 241 |
| 8.1 | Introduction | 241 |
| 8.1.1 | Equations and their mathematical setting | 241 |
| 8.1.2 | Examples from Physics, Chemistry and Biology | 243 |
| 8.2 | Bifurcation of Reaction-Diffusion Systems | 246 |
| 8.2.1 | Periodic solutions | 246 |
| 8.2.2 | Attractor bifurcation | 248 |
| 8.3 | Singularity Sphere in S^m -Attractors | 251 |
| 8.3.1 | Dirichlet boundary condition | 251 |
| 8.3.2 | Periodic boundary condition | 256 |
| 8.3.3 | Invariant homological spheres | 258 |
| 8.4 | Belousov-Zhabotinsky Reaction Equations | 259 |
| 8.4.1 | Set-up | 259 |
| 8.4.2 | Bifurcated attractor | 260 |
| 8.5 | Notes | 265 |
| 9. | Pattern Formation and Wave Equations | 267 |
| 9.1 | Kuramoto-Sivashinsky Equation | 267 |
| 9.1.1 | Set-up | 267 |
| 9.1.2 | Symmetric case | 268 |
| 9.1.3 | General case | 271 |
| 9.1.4 | S^1 -invariant sets | 273 |
| 9.2 | Cahn-Hillard Equation | 275 |

| | | |
|--------|--|-----|
| 9.2.1 | Set-up | 275 |
| 9.2.2 | Neumann boundary condition | 276 |
| 9.2.3 | Periodic boundary condition | 286 |
| 9.2.4 | Saddle-node bifurcation | 290 |
| 9.3 | Complex Ginzburg-Landau Equation | 291 |
| 9.3.1 | Set-up | 291 |
| 9.3.2 | Dirichlet boundary condition | 293 |
| 9.3.3 | Periodic boundary condition | 296 |
| 9.4 | Ginzburg-Landau Equations of Superconductivity | 297 |
| 9.4.1 | The model | 297 |
| 9.4.2 | Attractor bifurcation | 302 |
| 9.4.3 | Physical remarks | 315 |
| 9.5 | Wave Equations | 322 |
| 9.5.1 | Wave equations with damping | 322 |
| 9.5.2 | System of wave equations | 324 |
| 9.6 | Notes | 325 |
| 10. | Fluid Dynamics | 327 |
| 10.1 | Geometric Theory for 2-D Incompressible Flows | 327 |
| 10.1.1 | Introduction and preliminaries | 327 |
| 10.1.2 | Structural stability theorems | 327 |
| 10.2 | Rayleigh-Bénard Convection | 330 |
| 10.2.1 | Bénard problem | 330 |
| 10.2.2 | Boussinesq equations | 331 |
| 10.2.3 | Attractor bifurcation of the Rayleigh-Bénard problem | 335 |
| 10.2.4 | 2-D Rayleigh-Bénard convection | 341 |
| 10.3 | Taylor Problem | 343 |
| 10.3.1 | Taylor's experiments and Taylor vortices | 343 |
| 10.3.2 | Governing equations | 343 |
| 10.3.3 | Stability of secondary flows | 349 |
| 10.3.4 | Taylor vortices | 354 |
| 10.4 | Notes | 365 |
| | <i>Bibliography</i> | 367 |
| | <i>Index</i> | 373 |
