Preface	vii
1. Single-Degree-of-Freedom Systems.	1
1.1 Free Oscillations in Systems Close to Linear Ones	1
1.1.1 Complex equations of motion and solution by the multiple scales method	1
1.1.2 Applications.	5
1.1.2.1 Nonlinear oscillator with cubic nonlinearity.	5
1.1.2.2 Oscillator with self-excitation due to nonlinear damping	9
1.1.3 Change of the dependent variable.	10
1.2 Forced Oscillations of a Nonlinear Oscillator	12
1.2.1 Complex equations of motion and solution by the multiple scales method	12
1.2.2 Nonresonant case	14
1.2.3 Subharmonic resonance	16
1.2.4 Superharmonic resonance	29
1.2.5 Primary resonance	38
1.3 Concluding Remarks.	43
2. Autonomous Two-Degree-of-Freedom Symmetric Cubic Systems with Close Natural Frequencies.	45
2.1. Governing Equations and Solution by the Multiple Scales Method	45
2.2. Free Oscillations in Conservative Systems	51
2.2.1. Coupled stationary oscillations	51
2.2.1.1. Normal and elliptic modes	52
2.2.1.2. Stability of the CSMs	55
2.2.2. Bifurcations of stationary modes at changing energy of oscillation	56
2.2.3. Stationary modes paths	59
2.2.4. Nonstationary oscillations and amplitude-phase portraits . .	68
2.3 Free Oscillations in Dissipative Systems.	71
2.4 Concluding Remarks.	74

3.	Non-autonomous Two-Degree-of-Freedom Cubic Systems with Close Natural Frequencies.	77
3.1	Governing Equations and Solution by the Multiple Scale Method	77
3.2	Undamped Systems.	82
3.2.1	Stationary oscillations.	82
3.2.2	Stability of the coupled stationary modes.	86
3.2.3	Numerical analysis of the coupled stationary modes.	87
3.2.4	Nonstationary oscillations.	101
3.3	Damped Systems.	103
3.3.1	Coupled stationary modes	103
3.3.2	Qualitative analysis of equations for CSMs.	107
3.3.3	Bifurcations of the CSMs.	110
3.3.4	Stability of CSMs.	119
3.3.5	Numerical analysis of the CSMs	121
3.3.6	Nonstationary oscillations	128
3.4	Concluding Remarks.	132
4.	Nonlinear Flexural Free and Forced Oscillations of a Circular Ring	134
4.1	Governing Equations and Solution by the Multiple Scales Method.	135
4.1.1	Geometrical relationships	135
4.1.2	Equations of motion	136
4.1.3	Equations of amplitude-frequency modulation.	138
4.2	Free Oscillations	140
4.2.1	Stationary oscillations	141
4.2.2	Integral of the amplitude-frequency modulation. Stability of the stationary modes	144
4.2.3	Nonstationary oscillations. General solution.	148
4.3	Forced Oscillations.	151
4.3.1	Uncoupled forced oscillations	151
4.3.2	Coupled stationary oscillations	152
4.3.2.1	Exact internal resonance.	157
4.3.2.2	Inexact internal resonance.	162
4.4	Concluding Remarks.	166
5.	Localized Normal Modes in a Chain of Nonlinear Coupled Oscillators	169
5.1	A System of Two Weakly Coupled Nonlinear Oscillators.	169
5.2	Nonlinear Dynamics of Infinite Chains of Coupled Oscillators	179
5.3	Concluding Remarks.	188
6.	Nonlinear Dynamics of Coupled Oscillatory Chains.	190
6.1.	Introduction	190
6.2.	Nonlinear Dynamics of an Infinite Chain of Coupled Particles	191
6.3.	Nonlinear Dynamics of Infinite Coupled Chains	198
6.3.1	Long wavelengths in both directions.	198
6.3.2	Long wavelengths in the longitudinal direction.	199

6.3.3	Short waves in both directions	200
6.3.4	Concluding Remarks	203
7.	Nonlinear Dynamics of Strongly Non-Homogeneous Chains with Symmetric Characteristics	205
7.1	Initial System and Main Asymptotics	205
7.1.1	Inertial non-homogeneity.	206
7.1.1.1	Acoustic branch	206
7.1.1.2	Optical branch	212
7.1.2	Elastic non-homogeneities	213
7.1.2.1	Acoustic branch	214
7.1.2.2	Optical branch	216
7.2	Numerical Simulation	218
7.3	Concluding Remarks.	220
8.	Transversal Dynamics of One-Dimensional Chain on Nonlinear Asymmetric Substrate	222
8.1	Introduction	222
8.2	Model	223
8.3	Numerical Simulation.	230
8.4	Concluding Remarks.	235
	Concluding Remarks	237
	Appendix: Inertial Forces and Methodology of Mechanics	239
	Bibliography.	249
	Index	257
