

Paul Manneville is CNRS Senior Scientist (Directeur de Recherche) at LadHyX, the Hydrodynamics Laboratory of Ecole Polytechnique in Palaiseau, France. Trained as a physicist, he worked at Saclay on instabilities in liquid crystals, convection, and more generally on nonlinear dynamics and the scenarios of transition to chaos, in particular the intermittency route, spatiotemporal chaos and its connection with statistical physics. Now at LadHyX he focuses more the transition to turbulence in open flow systems, studying film flows and wall-bounded flows. He served as a Scientific Editor for J. Physics A (IOP), Phys. Rev. E (AIP), J. Fluid Mech.
