

CONTENTS

Introduction	v
Preface	vii
1. Multiple Channel Reaction Dynamics Using Universal Crossed Molecular Beam Techniques	1
Xueming Yang	
2. Ion Imaging Applied to the Study of Chemical Dynamics	61
David W. Chandler and Joseph I. Cline	
3. The Dynamics of Hydrogen Atom Abstraction from Polyatomic Molecules	105
Xianghong Liu and Arthur G. Suits	
4. <i>Ab Initio</i> Potential Energy Surfaces of Large Reaction Systems	145
A. M. Mebel	
5. Theoretical Dynamics Treatment of Chemical Reactions	209
J. Z. H. Zhang, Yi M. Li, Ming L. Wang and Yun Xiang	

6. Quasiclassical Trajectory Studies of Four-Atom Reactions	249
Diego Troya, Matthew J. Lakin, and George C. Schatz	
7. Recent Developments in Statistical Rate Theory for Unimolecular and Complex-Forming Reactions	291
Sean C. Smith	
8. Non-Born–Oppenheimer Chemistry: Potential Surfaces, Couplings, and Dynamics	329
Ahren W. Jasper, Brian K. Kendrick, C. Alden Mead and Donald G. Truhlar	
9. Semiclassical Theory of Nonadiabatic Transition and Tunneling	393
Chaoyuan Zhu, Gennady Mil’Nikov and Hiroki Nakamura	
10. Transition State Spectroscopy	453
Daniel M. Neumark	
11. Coincidence Imaging Techniques	475
Robert E. Continetti and Carl C. Hayden	
12. Time-Resolved Photoelectron Spectroscopy and Imaging	529
Toshinori Suzuki	
13. Manipulating Cold Molecules with Nonresonant Fields	579
Bretislav Friedrich	
Index	633
