

## CONTENTS

Preface	v
Hypergeometric Summation Revisited <i>S. A. Abramov, M. Petkovšek</i>	1
Five Applications of Wilf-Zeilberger Theory to Enumeration and Probability <i>M. Apagodu, D. Zeilberger</i>	12
Factoring Systems of Linear Functional Equations Using Eigenrings <i>M. A. Barkatou</i>	22
Modular Computation for Matrices of Ore Polynomials <i>H. Cheng, G. Labahn</i>	43
Beta-Expansions of Pisot and Salem Numbers <i>K. G. Hare</i>	67
Logarithmic Functional and the Weil Reciprocity Law <i>A. Khovanskii</i>	85
On Solutions of Linear Functional Systems and Factorization of Laurent–Ore Modules <i>M. Wu, Z. Li</i>	109
The Vector Rational Function Reconstruction Problem <i>Z. Olesh, A. Storjohann</i>	137
Fast Algorithm for Computing Multipole Matrix Elements with Legendre Polynomials <i>V. Yu. Papshev, S. Yu. Slavyanov</i>	150

Recurrence Relations for the Coefficients in Hypergeometric Series Expansions	158
<i>L. Rebillard, H. Zakrajšek</i>	
On Factorization and Solution of Multidimensional Linear Partial Differential Equations	181
<i>S. P. Tsarev</i>	
Two Families of Algorithms for Symbolic Polynomials	193
<i>S. M. Watt</i>	
Author Index	211
