

**Dhanjoo N Ghista** (PhD, Stanford University, 1964) is a world authority in biomedical engineering-physics, healthcare engineering, and community-development science (CDS). Additionally, he has pioneered the fields of Neo-humanistic Politicization (NHP) and Equitable Globalization (EQG). The healthcare engineering field is oriented to the development of algorithms for cost-effective healthcare delivery, which is extremely relevant to all countries. The CDS fields deals with the setting-up of functionally-sustainable communities, such as the newly independent nation of East Timor. NHP involves collective-capitalism and people-centric socio-economic democracy. EQG is all about developing self-reliant regional economic blocs (such as the Southeast Asian Economic bloc) under the aegis of the World government. Professor Ghista is committed to the theme of "Education for enlightenment and a progressive society, towards higher and higher dimensions of living". He has a phenomenal scholarly and research record, having published more than 20 books and over 400 works in the disciplines of engineering, biomedicine and social sciences.
