

Born and raised in Belgium, Peter Bossaerts received a licentiate and doctorandus degree in applied economics from the University of Antwerp. After coursework towards a Master's in statistics at the Vrije Universiteit Brussel, he changed to the University of California, Los Angeles, where he finished his PhD in Management (Finance) under Richard Roll. His first appointment as assistant professor was at Carnegie Mellon University's Graduate School of Industrial Administration. Peter Bossaerts is presently the William D Hacker Professor of Economics and Management and Professor of Finance at the California Institute of Technology. He has taught undergraduate, MBA, PhD and executive classes in finance at various places across the world. He is Co-Editor of the *Review of Finance*, a past associate editor of the *Review of Financial Studies*, and currently on the board of the *Annals of Finance*, *Mathematical Finance*, *The Journal of Financial Econometrics*, *The Journal of Financial Markets*, and *Foundations and Trends in Economic Theory*. While his research has encompassed many areas of theoretical and empirical finance, he is predominantly interested in discovering fundamental principles in the interplay between individual behavior and aggregate phenomena in competitive financial markets. Unlike most finance researchers, he has been using controlled experiments as main inference tool. This work has been awarded two prizes. His experimental work has led him to investigate the neural foundations of perception and choice under uncertainty.
