<b>Preface</b>	<b>xiii</b>
<b>PART I PRELIMINARIES</b>	<b>1</b>
<b>1 Introduction and Overview</b>	<b>3</b>
1.1 A Tour of Derivatives and Markets	4
1.1.1 Forward Contracts	4
1.1.2 Futures	6
1.1.3 “Vanilla” Options	8
1.1.4 Other Derivative Products	12
1.2 An Overview of Derivatives Pricing	14
1.2.1 Replication: Static and Dynamic	15
1.2.2 Approaches to Valuation when Replication is Possible	16
1.2.3 Markets: Complete and Otherwise	19
1.2.4 Derivatives Pricing in Incomplete Markets	20
<b>2 Mathematical Preparation</b>	<b>21</b>
2.1 Analytical Tools	22
2.1.1 Order Notation	22
2.1.2 Series Expansions and Finite Sums	23
2.1.3 Measures	25
2.1.4 Measurable Functions	27

2.1.5	Variation and Absolute Continuity of Functions	28
2.1.6	Integration	29
2.1.7	Change of Measure: Radon-Nikodym Theorem	41
2.1.8	Special Functions and Integral Transforms	42
2.2	Probability	47
2.2.1	Probability Spaces	47
2.2.2	Random Variables and Their Distributions	49
2.2.3	Mathematical Expectation	55
2.2.4	Radon-Nikodym for Probability Measures	66
2.2.5	Conditional Probability and Expectation	68
2.2.6	Stochastic Convergence	73
2.2.7	Models for Distributions	77
2.2.8	Introduction to Stochastic Processes	83
<b>3</b>	<b>Tools for Continuous-Time Models</b>	<b>93</b>
3.1	Wiener Processes	93
3.1.1	Definition and Background	93
3.1.2	Essential Properties	94
3.2	Itô Integrals and Processes	97
3.2.1	A Motivating Example	97
3.2.2	Integrals with Respect to Brownian Motions	99
3.2.3	Itô Processes	104
3.3	Itô's Formula	110
3.3.1	The Result, and Some Intuition	110
3.3.2	Outline of Proof	111
3.3.3	Functions of Time and an Itô Process	113
3.3.4	Illustrations	113
3.3.5	Functions of Higher-Dimensional Processes	115
3.3.6	Self-Financing Portfolios in Continuous Time	117
3.4	Tools for Martingale Pricing	118
3.4.1	Girsanov's Theorem and Changes of Measure	118
3.4.2	Representation of Martingales	122
3.4.3	Numeraires, Changes of Numeraire, and Changes of Measure	123
3.5	Tools for Discontinuous Processes	125
3.5.1	J Processes	125
3.5.2	More General Processes	130

<b>PART II PRICING THEORY</b>	<b>139</b>
<b>4 Dynamics-Free Pricing</b>	<b>141</b>
4.1 Bond Prices and Interest Rates	143
4.1.1 Spot Bond Prices and Rates	144
4.1.2 Forward Bond Prices and Rates	147
4.1.3 Uncertainty in Future Bond Prices and Rates	149
4.2 Forwards and Futures	150
4.2.1 Forward Prices and Values of Forward Contracts	151
4.2.2 Determining Futures Prices	153
4.2.3 Illustrations and Caveats	156
4.2.4 A Preview of Martingale Pricing	158
4.3 Options	159
4.3.1 Payoff Distributions for European Options	160
4.3.2 Put-Call Parity	161
4.3.3 Bounds on Option Prices	165
4.3.4 How Prices Vary with $T$ , $X$ , and $S_t$	169
<b>5 Pricing under Bernoulli Dynamics</b>	<b>174</b>
5.1 The Structure of Bernoulli Dynamics	176
5.2 Replication and Binomial Pricing	179
5.3 Interpreting the Binomial Solution	185
5.3.1 The P.D.E. Interpretation	186
5.3.2 The Risk-Neutral or Martingale Interpretation	186
5.4 Specific Applications	196
5.4.1 European Stock Options	196
5.4.2 Futures and Futures Options	199
5.4.3 American-Style Derivatives	202
5.4.4 Derivatives on Assets That Pay Dividends	209
5.5 Implementing the Binomial Method	220
5.5.1 Modeling the Dynamics	220
5.5.2 Efficient Calculation	230
5.6 Inferring Trees from Prices of Traded Options	239
5.6.1 Assessing the Implicit Risk-Neutral Distribution of $S_T$	240
5.6.2 Building the Tree	243
5.6.3 Appraisal	246

<b>6</b>	<b>Black-Scholes Dynamics</b>	<b>247</b>
6.1	The Structure of Black-Scholes Dynamics	248
6.2	Approaches to Arbitrage-Free Pricing	250
6.2.1	The Differential-Equation Approach	251
6.2.2	The Equivalent-Martingale Approach	254
6.3	Applications	261
6.3.1	Forward Contracts	261
6.3.2	European Options on Primary Assets	262
6.3.3	Extensions of the Black-Scholes Theory	270
6.4	Properties of Black-Scholes Formulas	273
6.4.1	Symmetry and Put-Call Parity	274
6.4.2	Extreme Values and Comparative Statics	275
6.4.3	Implicit Volatility	279
6.4.4	Delta Hedging and Synthetic Options	281
6.4.5	Instantaneous Risks and Expected Returns of European Options	284
6.4.6	Holding-Period Returns for European Options	287
<b>7</b>	<b>American Options and “Exotics”</b>	<b>292</b>
7.1	American Options	292
7.1.1	Calls on Stocks Paying Lump-Sum Dividends	293
7.1.2	Options on Assets Paying Continuous Dividends	296
7.1.3	Indefinitely Lived American Options	308
7.2	Compound and Extendable Options	311
7.2.1	Options on Options	311
7.2.2	Options with Extra Lives	321
7.3	Other Path-Independent Claims	327
7.3.1	Digital Options	327
7.3.2	Threshold Options	328
7.3.3	“As-You-Like-It” or “Chooser” Options	329
7.3.4	Forward-Start Options	330
7.3.5	Options on the Max or Min	331
7.3.6	Quantos	336
7.4	Path-Dependent Options	339
7.4.1	Extrema of Brownian Paths	339
7.4.2	Lookback Options	344
7.4.3	Barrier Options	348
7.4.4	Ladder Options	353
7.4.5	Asian Options	356

<b>8</b>	<b>Models with Uncertain Volatility</b>	<b>367</b>
8.1	Empirical Motivation	367
8.1.1	Brownian Motion Does Not Fit Underlying Prices	367
8.1.2	Black-Scholes No Longer Fits Option Prices	369
8.2	Price-Dependent Volatility	370
8.2.1	Qualitative Features of Derivatives Prices	371
8.2.2	Two Specific Models	373
8.2.3	Numerical Methods	379
8.2.4	Limitations of Price-Dependent Volatility	379
8.2.5	Incorporating Dependence on Past Prices	380
8.3	Stochastic-Volatility Models	382
8.3.1	Nonuniqueness of Arbitrage-Free Prices	383
8.3.2	Specific S.V. Models	388
8.4	Computational Issues	395
8.4.1	Inverting C.f.s	396
8.4.2	Two One-Step Approaches	397
<b>9</b>	<b>Discontinuous Processes</b>	<b>401</b>
9.1	Derivatives with Random Payoff Times	402
9.2	Derivatives on Mixed Jump/Diffusions	409
9.2.1	Jumps Plus Constant-Volatility Diffusions	409
9.2.2	Nonuniqueness of the Martingale Measure	411
9.2.3	European Options under Jump Dynamics	413
9.2.4	Properties of Jump-Dynamics Option Prices	415
9.2.5	Options Subject to Early Exercise	417
9.3	Jumps Plus Stochastic Volatility	418
9.3.1	The S.V.-Jump Model	419
9.3.2	Further Variations	422
9.4	Pure-Jump Models	426
9.4.1	The Variance-Gamma Model	426
9.4.2	The Hyperbolic Model	432
9.4.3	A Lévy Process with Finite Lévy Measure	436
9.4.4	Modeling Prices as Branching Processes	438
9.4.5	Assessing the Pure-Jump Models	445
9.5	A Markov-Switching Model	446

<b>10 Interest-Rate Dynamics</b>	<b>457</b>
10.1 Preliminaries	457
10.1.1 A Summary of Basic Concepts	457
10.1.2 Spot and Forward Measures	458
10.1.3 A Preview of Things to Come	461
10.2 Spot-Rate Models	462
10.2.1 Bond Prices under Vasicek	463
10.2.2 Bond Prices under Cox, Ingersoll, Ross	468
10.3 A Forward-Rate Model	472
10.3.1 The One-Factor HJM Model	474
10.3.2 Allowing Additional Risk Sources	478
10.3.3 Implementation and Applications	480
10.4 The LIBOR Market Model	498
10.4.1 Deriving Black's Formulas	500
10.4.2 Applying the Model	504
10.5 Modeling Default Risk	512
10.5.1 Endogenous Risk: The Black-Scholes-Merton Model	514
10.5.2 Exogenous Default Risk	518
 <b>PART III COMPUTATIONAL METHODS</b>	 <b>525</b>
<b>11 Simulation</b>	<b>527</b>
11.1 Generating Pseudorandom Deviates	529
11.1.1 Uniform Deviates	529
11.1.2 Deviates from Other Distributions	532
11.2 Variance-Reduction Techniques	537
11.2.1 Stratified Sampling	537
11.2.2 Importance Sampling	540
11.2.3 Antithetic Variates	541
11.2.4 Control Variates	544
11.2.5 Richardson Extrapolation	546
11.3 Applications	547
11.3.1 "Basket" Options	547
11.3.2 European Options under Stochastic Volatility	551
11.3.3 Lookback Options under Stochastic Volatility	553
11.3.4 American-Style Derivatives	554

<b>12 Solving P.D.E.s Numerically</b>	<b>577</b>
12.1 Setting Up for Solution	579
12.1.1 Approximating the Derivatives	579
12.1.2 Constructing a Discrete Time/Price Grid	580
12.1.3 Specifying Boundary Conditions	581
12.2 Obtaining a Solution	582
12.2.1 The Explicit Method	582
12.2.2 A First-Order Implicit Method	585
12.2.3 Crank-Nicolson's Second-Order Implicit Method	589
12.2.4 Comparison of Methods	591
12.3 Extensions	591
12.3.1 More General P.D.E.s	591
12.3.2 Allowing for Lump-Sum Dividends	594
<b>13 Programs</b>	<b>595</b>
13.1 Generate and Test Random Deviates	596
13.1.1 Generating Uniform Deviates	596
13.1.2 Generating Poisson Deviates	596
13.1.3 Generating Normal Deviates	596
13.1.4 Testing for Randomness	597
13.1.5 Testing for Uniformity	597
13.1.6 Anderson-Darling Test for Normality	598
13.1.7 ICF Test for Normality	598
13.2 General Computation	599
13.2.1 Standard Normal CDF	599
13.2.2 Expectation of Function of Normal Variate	599
13.2.3 Standard Inversion of Characteristic Function	600
13.2.4 Inversion of Characteristic Function by FFT	600
13.3 Discrete-Time Pricing	601
13.3.1 Binomial Pricing	601
13.3.2 Solving PDEs under Geometric Brownian Motion	602
13.3.3 Crank-Nicolson Solution of General PDE	602
13.4 Continuous-Time Pricing	602
13.4.1 Shell for Black-Scholes with Input/Output	602
13.4.2 Basic Black-Scholes Routine	603
13.4.3 Pricing under the C.E.V. Model	603

13.4.4 Pricing a Compound Option	603
13.4.5 Pricing an Extendable Option	604
13.4.6 Pricing under Jump Dynamics	604
<b>Bibliography</b>	<b>605</b>
<b>Subject Index</b>	<b>617</b>
