Introduction		xvii
Section I	Sets and Functions	1
Section II	What is Mathematics?	9
	Theorems and Proof	9
	Styles of Proof	10
Section III	Matrix Algebra	13
	Adding and Multiplying Matrices	14
	Determinants	23
	Matrix Inverse	30
Section IV	Linear Algebra	37
	Linear Combinations and Dependency	40
	Rank	50
	Solutions to Linear Equations	55
	Lines and Vectors	61
	Linear Functions	66

<b>Section V</b>	<b>Calculus of One Variable</b>	<b>69</b>
	Metric Spaces	70
	Limits	80
	Limits at Infinity	87
	Continuity	90
	Derivatives	95
	Differential	104
	Maximum	106
<b>Section VI</b>	<b>Calculus of Several Variables</b>	<b>115</b>
	Derivatives	117
	Total Differential	124
	Finding the (Total) Differential	125
	Maximum	128
	Quadratic Forms	140
	Inverse Functions	142
	Implicit Function Theorem	149
	Implicit Function Theorem — Linear Equations	153
	Implicit Function Theorem — General Case	154
	Convexity	161
<b>Section VII</b>	<b>Techniques of Optimization</b>	<b>175</b>
	Optimization	175
	Unconstrained Maximum Problem — One Variable Case	175
	Unconstrained Maximum Problem — Several Variables	177
	Constrained Maximum Problem	179
	Employing the Implicit Function Theorem	179
	The Method of Lagrange	182
	Summary — Unconstrained and Equality Constraints	186
	Inequality Constraints	189
	Kuhn–Tucker	191
<b>Section VIII</b>	<b>Odds and Ends</b>	<b>201</b>
	Duality	201
	Homogeneous Functions	203
	Homothetic Functions	206
	Linking Homogeneous Functions and Concavity	206
	Envelope Theorem	206
	Separating Hyperplanes	209

	Comparative Statics	213
	An Example of Comparative Statics	215
<b>Section IX</b>	<b>Preferences, Utility, and Demand</b>	<b>217</b>
	Elements of a Maximum	217
	Preferences and Utility	220
	Transformations of Quasiconcave Functions	228
	Utility Maximization	231
	Interpreting the First-Order Necessary Conditions	232
	Demand	233
	Applying Comparative Statics to the Consumer Problem	234
	Indirect Utility	238
	Using Duality	238
	Revealed Preference	241
	Choice Under Uncertainty	246
	Allais Paradox	252
	Risk Aversion	253
<b>Section X</b>	<b>Supply</b>	<b>257</b>
	Obtaining Total Variable Cost	258
	Profit Maximization and Supply in Terms of Output	261
	Profit Maximization, Several Inputs	263
	Profit Maximization, Several Inputs and Several Outputs	265
	Monopoly	266
	One Input and One Output	268
<b>Section XI</b>	<b>Game Theory</b>	<b>271</b>
	Games in Normal Form	274
	Dominant Strategies	276
	Mixed Strategies	282
	More Finding Nash	293
	Finding Nash for Three Players	305
	Interval Strategies Sets with Differentiable Payoffs	315
	Cournot with Quadratic Costs	317
	Cournot with Asymmetric Information	318
	Dynamic Games: The Stackelberg Model	320
	Extensive Form	321
	Why Nash Equilibrium?	324

<b>Section XII</b>	<b>Welfare and General Equilibrium</b>	<b>327</b>
	Pure Trade	327
	Arrow's Theorem	332
	A Model with Production	334
	Competition and the Market System	337
	Welfare Theorems	340
	Competitive Equilibrium with Production	341
	Robinson Crusoe	342
<b>Section XIII</b>	<b>Applications</b>	<b>347</b>
	The Firm Over Time	347
	Pollution Problem	351
	Duopoly with Advertising	355
	The Averch–Johnson Effect	358
