

K C Wang received a BS degree in physics from National Taiwan University in 1972, and a PhD degree in physics from California Institute of Technology in 1979. He was a research physicist at University of California, Irvine, where he investigated the physics of neutrinos. He joined Rockwell Science Center in 1985. His colleagues and he pioneered the development of GaAs heterojunction bipolar transistor (HBT) technology. He was the Manager of the High Speed Circuits Department there from 1990–97, and was responsible for the development of optical communication circuits and A to D converters. He is currently the Director of the Lightwave Products Department of Rockwell Semiconductor Systems. He has authored or co-authored more than 126 journal and conference publications in electronics and physics, and holds 1 US patent.

Dr Wang was a recipient of Rockwell's 1994 Engineer of the Year and 1995 Chairman's Team Awards. He also received a 1996 R&D 100 Award. He served in the technical program committees (TPC) of the IEEE LEOS 1995 Summer Topical Meeting on Lightwave ICs for New Age, the IEEE GaAs IC Symposium 1995–96, and a workshop on TDM optical fiber transmission in OFC'97. He currently serves in the TPC of IEEE International Microwave Symposium. He was a guest editor of the IEEE J of Solid-State Circuits in 1996. Dr Wang is a senior member of the IEEE and a member of the American Physical Society.
