<i>Preface</i>	vii
1. Introduction	1
1.1 Motivation, aims and audience	1
1.1.1 Relevance	1
1.1.2 Aims and structure	2
1.1.3 Bibliography	3
1.2 Governing equations	5
1.2.1 Instantaneous equations and basic concepts	5
1.2.2 Reynolds averaging	10
1.2.3 The mean reaction rate	10
1.3 Summary	11
1.4 Exercises	11
2. Some Comments on Turbulence	13
2.1 Introduction	13
2.2 Statistical description	14
2.2.1 The randomness of turbulence	14
2.2.2 Probability density functions	15
2.3 Turbulent scales	21
2.3.1 Large-eddy scales	21
2.3.2 Dissipation and small scales	21
2.3.3 Taylor microscale	23
2.3.4 What are eddies?	24
2.4 Temporal and spatial correlations	24
2.4.1 Temporal autocorrelation	24

2.4.2	The convergence of averages	25
2.4.3	Spatial autocorrelation	26
2.4.4	Taylor hypothesis	27
2.4.5	Scalar scales	28
2.5	Reynolds-averaged equations	28
2.5.1	First moments	28
2.5.2	Eddy diffusivity	29
2.5.3	Second moments	30
2.5.4	Computational Fluid Dynamics	32
2.6	Spectra and intermittency	32
2.6.1	Spectra	32
2.6.2	Intermittency	34
2.7	Summary	36
2.8	Exercises	36
3.	Mixing	37
3.1	Introduction	37
3.2	Molecular mixing	37
3.2.1	Some analytical solutions	37
3.2.2	Transport properties	41
3.2.3	Random walk	42
3.2.4	Brownian motion	43
3.3	Turbulent mixing	45
3.3.1	Taylor dispersion	45
3.3.2	Characterization of mixing	48
3.3.3	Length scales and spectra	53
3.3.4	Scalar dissipation	55
3.4	Reaction-diffusion systems	58
3.4.1	Propagating front 1	59
3.4.2	Propagating front 2	59
3.4.3	Unsteady flamelet equation	60
3.4.4	Final comments	61
3.5	Summary	61
3.6	Exercises	62
4.	Flows with Non-premixed Reactants	63
4.1	Introduction	63
4.2	Moment methods	63

4.2.1	Neglecting the fluctuations: very slow chemistry	63
4.2.2	Eddy Dissipation Concept and derivatives	65
4.2.3	Second-order	66
4.2.4	Presumed joint pdf	66
4.2.5	Other	67
4.3	The well-stirred reactor	67
4.4	Conserved scalar methods	69
4.4.1	Mixture fraction	69
4.4.2	Qualitative structure of a laminar non-premixed flame	71
4.4.3	Fast chemistry	72
4.4.4	The pdf of the mixture fraction	74
4.4.5	Steady and transient flamelets	75
4.4.6	Conditional Moment Closure	77
4.4.7	Flame Surface Density	79
4.5	Transported pdf	80
4.5.1	Governing equations	80
4.5.2	Monte-Carlo method	81
4.5.3	Further developments	82
4.6	Concluding comments	83
4.7	Exercises	84
5.	Flows with Premixed Reactants	87
5.1	Introduction	87
5.2	Laminar premixed flames	87
5.2.1	Background	87
5.2.2	Propagation	89
5.2.3	Laminar premixed flame structure	89
5.2.4	Estimation of laminar premixed flame thickness	91
5.2.5	Effects of mixture strength: flammability limits	92
5.2.6	Effects of pressure and temperature	93
5.3	Turbulent premixed flames	94
5.3.1	Turbulent burning velocity	94
5.3.2	Stretch, strain and curvature	95
5.3.3	Turbulent flame speed measurements	97
5.3.4	Turbulent flame speed correlations	99
5.3.5	Turbulent flame speed: a fractal approach	100
5.3.6	Dimensionless numbers for turbulent premixed flames	101

5.3.7	Regime diagrams	102
5.4	Turbulent premixed combustion modelling	104
5.4.1	Favre averaging	105
5.4.2	Turbulent transport in premixed flames	106
5.4.3	Eddy Break-Up Model for premixed flames	108
5.4.4	The laminar flamelet concept	109
5.4.5	Laminar flamelets in practice	109
5.4.6	Bray-Moss-Libby transport modelling	110
5.4.7	Bray-Moss-Libby reaction rate modelling	117
5.4.8	Flame surface density modelling	121
5.4.9	The G -equation formulation	123
5.4.10	Other models for turbulent premixed flames	130
5.5	Exercises	131
6.	Numerical Methods for Reacting Flows	133
6.1	Introduction	133
6.2	Combustion CFD	133
6.2.1	Unsteady convection-diffusion-reaction equation	134
6.2.2	Spatial discretisation	134
6.2.3	Solution algorithms	136
6.2.4	RANS, LES and DNS	137
6.2.5	Numerical considerations for combustion problems	137
6.3	Numerical solvers for stiff differential equations	140
6.3.1	Background	140
6.3.2	Forward Euler method	141
6.3.3	Timescales and stiffness	141
6.3.4	Properties of solvers	144
6.3.5	Solvers for chemical systems	145
6.3.6	Method of lines	148
6.3.7	Final comments	149
6.4	Exercises	150
7.	Experimental Methods for Reacting Flows	151
7.1	Introduction	151
7.2	General concepts	151
7.2.1	Uncertainties and measurement errors	151
7.2.2	Resolution and response	153
7.2.3	Filtering	154

7.3	Measurement techniques for reacting flows	155
7.3.1	Visualization	155
7.3.2	Intrusive techniques	155
7.3.3	Non-intrusive techniques	157
7.4	Final comments	160
7.5	Exercises	160
8.	Epilogue	163
	<i>Bibliography</i>	165
	<i>Index</i>	175
