

CONTENTS

PREFACE	vii
I. INTRODUCTION	1
II. REDISCOVERY OF GAUGE SYMMETRY	
2.1 Introduction	5
2.2 The Einstein Connection	6
2.3 Weyl's Gauge Theory	11
2.4 Canonical Momentum and Electromagnetic Potential	15
2.5 Quantum Mechanics and Gauge Theory	16
2.6 The Aharonov-Bohm Effect	18
2.7 Electromagnetism as Gauge Theory	21
2.8 Isotopic Spin and the New Gauge Theory	22
2.9 Yang-Mills Gauge Theory	25
2.10 Gauge Theory and Geometry	29
2.11 Discussion	32
III. GAUGES, POTENTIALS AND ALL THAT	
3.1 Introduction	34
3.2 Local Gauge Transformations	35
3.3 Connections and Potentials	36
3.4 The Vector Potential Field	39
3.5 Choosing a Gauge	41
3.6 Maxwell's Field Tensor and Stokes' Theorem	43
IV. YANG-MILLS GAUGE THEORIES	
4.1 Introduction	48
4.2 Building a Gauge Model	48
4.3 The Problem of Mass	51
4.4 The Yang-Mills Equations	52
4.5 Particle Equation of Motion	53

V. THE MAXWELL EQUATIONS	
5.1 Introduction	57
5.2 The Non-Abelian Divergence	57
5.3 The Second Maxwell Equation and Charge Conservation	61
5.4 Maxwell's Equations and Superposition	65
5.5 Charges in Yang-Mills Theory	66
5.6 Yang-Mills Wave Equation	70
VI. THE DIFFICULT BIRTH OF MODERN GAUGE THEORY	
6.1 Introduction	73
6.2 Leptons and W Bosons	73
6.3 Quarks and Weak Decays	77
6.4 The "Dark Age" of Field Theory	82
VII. THE BREAKING OF GAUGE SYMMETRY	
7.1 Introduction	86
7.2 Symmetry Breaking of the Second Kind	87
7.3 Geometry of Symmetry Breaking	88
7.4 The Broken Gauge Superconductor	93
7.5 Spontaneous Symmetry Breaking	96
7.6 Goldstone's Theorem	100
7.7 A Parable on Symmetry Breaking	101
VIII. THE WEINBERG-SALAM UNIFIED THEORY	
8.1 Introduction	102
8.2 Weak Interactions Revisited	103
8.3 Unification without Renormalization	106
8.4 Symmetry Breaking and Gauge Field Masses	110
8.5 The Weinberg Angle	111
8.6 Renormalization and Revival	113
8.7 The Electron Mass	117
8.8 Discussion	118
IX. COLOR GAUGE THEORY	
9.1 Introduction	121
9.2 Colored Quarks and Gluons	122
9.3 Colorless Quark Systems	124

<i>Contents</i>	xi
9.4 Asymptotic Freedom	127
9.5 The Running Coupling Constant	130
9.6 Discussion	136
X. TOPOLOGY AND GAUGE SYMMETRY	
10.1 Introduction	139
10.2 Why Flux Trapping?	140
10.3 The Topological Superconductor	141
10.4 The Canonical Vortex	
10.4.1 Internal Space and Topology	144
10.4.2 Where Has the Torus Gone?	147
10.4.3 The Degenerate Vortex	147
10.5 How to Add the Flux Number	149
10.6 The Dirac Magnetic Monopole	153
10.7 Discussion	157
APPENDIX: SOME KEY GROUP THEORY TERMS	
A.1 Continuous Groups	158
A.2 Compact Lie Groups	159
A.3 Orthogonal and Unitary Groups	
A.3.1 Orthogonal Groups	160
A.3.2 Special Unitary Groups	161
A.3.3 Homomorphism of $O(3)$ and $SU(2)$	162
A.4 Group Generators	
A.4.1 Rotation Group	164
A.4.2 Lie Group Generators	165
A.5 $SU(3)$ Group	166
INDEX	169
