

## CONTENTS

Preface	v
Chapter 1: INTRODUCTION	1
1.1 Traditional Pictures of Nuclear Structure	5
1.2 Dirac Phenomenology and Relativistic Brueckner-Hartree-Fock Theory	8
1.3 Applications of Dirac Phenomenology	13
1.4 The Relativistic Impulse Approximation	16
1.5 Importance of Scalar Fields in Nuclear and Particle Physics	17
Chapter 2: THE NUCLEUS AS A RELATIVISTIC FERMI LIQUID	20
2.1 Effective Lagrangians and the One-Boson-Exchange Models of the Nucleon-Nucleon Interaction	22
2.2 Relativistic Brueckner-Hartree-Fock Theory	25
2.2.1 The problem of self-consistency	26
2.2.2 Reaction matrices and the OBE model of the nuclear force	29
2.2.3 Methods of solution	32
2.3 Calculation of the Nucleon Self-Energy in Nuclear Matter	34
2.3.1 Calculation of $\Sigma^{++}(\mathbf{p})$	39
2.3.2 Calculation of $\Sigma^{-+}(\mathbf{p})$	42
2.3.3 Calculation of $\Sigma^{--}(\mathbf{p})$	45
2.3.4 Calculation of $A(\mathbf{p})$ , $B(\mathbf{p})$ and $C(\mathbf{p})$	48

2.4	Binding Energy and Saturation Density of Nuclear Matter	53
2.5	The Effective Interaction in Nuclear Matter and in Finite Nuclei	64
2.5.1	The quasiparticle interaction in a relativistic theory	74
2.5.2	<i>A simple model</i>	78
2.5.3	The parameters $F_0$ , $F'_0$ , $G_0$ and $G'_0$	80
2.5.4	The effective mass, compressibility, and symmetry energy parameters	87
2.5.5	The momentum-transfer dependence of the effective interaction	88
2.6	Models of Finite Nuclei	96
Chapter 3: THE NUCLEAR OPTICAL MODEL		101
3.1	The Self-Energy of a Continuum Nucleon in Nuclear Matter	103
3.1.1	Calculations of $A(\mathbf{p})$ , $B(\mathbf{p})$ , $C(\mathbf{p})$ and $U_{\text{eff}}(\mathbf{p})$	109
3.1.2	Comparison with results of Dirac and Schroedinger phenomenology	120
3.2	The Relativistic Optical Model for Finite Nuclei	126
3.3	Relation between Relativistic and Nonrelativistic Optical Models	136
3.3.1	The impulse approximation	140
3.4	Scattering Amplitudes: On-Shell and Off-Shell	144
3.5	The Relativistic Impulse Approximation	147
3.5.1	An illustrative example	151
3.5.2	The density matrix	153
3.5.3	Pion-exchange dynamics	156
3.6	Applications of the Relativistic Impulse Approximations	159
Chapter 4. ELECTROMAGNETIC PROBES OF NUCLEAR STRUCTURE		167
4.1	The Distribution of Charge and Matter in Nuclei	167
4.2	Inclusive $(e, e')$ Reactions near the Quasi-Elastic Peak	171
Chapter 5: SUMMARY AND OUTLOOK		180
Appendices: APPLICATION OF FIELD-THEORETIC TECHNIQUES IN NUCLEAR PHYSICS		182
A.1	<i>Notation and Conventions</i>	183
A.2	Feynman Diagrams with Nonperturbative Elements	187
A.3	Rules for the Evaluation of Feynman Diagrams and the Relativistic Impulse Approximation	194

A.4	The Bethe-Salpeter Equation	200
A.5	The Boson-Exchange Model of the Nuclear Force	205
A.6	Self-Consistent-Field Methods in Relativistic Many-Body Theory	209
A.7	Scattering Amplitudes, Cross Sections and Spin Observables	214
A.8	The Effective Mass	223
A.9	Calculation of the Nucleon Self-Energy in the Hartree-Fock Approximation	225
	References	232
