
CONTENTS

Preface		v
Chapter 0	INTRODUCTION	1
Part 1 SPIN GLASSES		
Chapter I	THE REPLICA APPROACH	7
	I.1 Quenched Averages and Replicas	7
	I.2 Replica Symmetric Solution of the SK Model	9
	I.3 Stability	12
Chapter II	THE TAP APPROACH	15
	II.1 Mean Field Solution for a Given Sample	15
	II.2 About the Number of Solutions of the TAP Equations	18
	II.3 Local Field Distribution	20
	II.4 Stability and the Solutions of the TAP Equations	21
Chapter III	BREAKING THE REPLICA SYMMETRY	23
	III.1 Pure States	23

	III.2	Distribution of the Distance between the Pure States: the Order Parameter is a Function	26
	III.3	Computation of $P(q)$ with Replicas: Existence of Many States and the Breaking of the Replica Symmetry	30
	III.4	A First Stage of Replica Symmetry Breaking	33
	III.5	Replica Symmetry Breaking: The Final Formulation	36
	III.6	How to Compute $P(q)$	44
Chapter IV		THE NATURE OF THE SPIN GLASS PHASE	49
	IV.1	The Discovery of Ultrametricity	49
	IV.2	The Fluctuations of $P_f(q)$ with J_{ij}	54
	IV.3	The Foliation of the Tree	54
	IV.4	The Energies and Free Energies as Independent Random Variables	56
		IV.4.a The SK model	56
		IV.4.b Two instructive models: the REM and the GREM	58
	IV.5	Self Averageness and Reproducibility	60
	IV.6	A Branching Diffusion Process as a Generator of Ultrametricity	61
Chapter V		THE CAVITY METHOD	65
	V.1	Introduction	65
	V.2	The Stability of the Thermodynamical Limit	66
		V.2.a Inside a state — A new derivation of the TAP equations	66
		V.2.b Inside a cluster — Self-consistency of ultrametricity and the exponential distribution of the states	69
	V.3	Fluctuations around the Mean Field	74
Chapter VI		DYNAMICS	77
	VI.1	Introduction	77
	VI.2	Dynamics on Finite Time Scales	77
	VI.3	Dynamics on Infinite Time Scales and States	82

Part 2 OPTIMIZATION

Chapter VII	COMBINATORIAL OPTIMIZATION PROBLEMS	307
	VII.1 Introduction	307
	VII.2 Combinatorial Optimization Problems	308
	VII.3 Optimization and Statistical Mechanics at Zero Temperature	310
Chapter VIII	SIMULATED ANNEALING	312
Chapter IX	ANALYTICAL RESULTS	316
	IX.1 General Thermodynamical Properties and Scalings	317
	IX.2 The Matching Problem	320
	IX.3 The Travelling Salesman Problem	324
	IX.4 The Assignment Problem and its Relations with the Matching and <i>TSP</i>	327
	IX.5 Graph Partitioning	331
	IX.6 Some Remarks	333

Part 3 BIOLOGICAL APPLICATIONS

Chapter X	INTRODUCTION	387
Chapter XI	PREBIOTIC EVOLUTION AND SPIN GLASSES	389
Chapter XII	BRAIN MODELLING	392
Chapter XIII	THE HOPFIELD MODEL AND ITS VARIATIONS	394
	XIII.1 The Assembly of Neurons as a Spin Glass	394
	XIII.2 The Hebb Rule. Different Proposals	396
	XIII.3 The Analytical Solution of Hopfield's Model	398
	XIII.3.a The replica method	398
	XIII.3.b The cavity method	399
	XIII.3.c Fluctuations around the mean field	404
