PREFACE .....	v
EXPLANATORY NOTES .....	xiii
<b>CHAPTER 1: QUANTUM FIELD THEORY IN THE HEISENBERG PICTURE</b>	
1.1 GENERAL REMARKS ON QUANTUM FIELD THEORY	
1.1.1 Basic concepts .....	1
1.1.2 Poincaré invariance .....	4
1.2 LAGRANGIAN CANONICAL FORMALISM	
1.2.1 Lagrangian density and field equations .....	7
1.2.2 Canonical quantization in the ordinary case .....	8
1.2.3 Canonical quantization with multiplier fields .....	11
1.2.4 Noether theorem .....	12
1.2.5 Poincaré generators .....	14
1.3 FREE FIELD THEORIES	
1.3.1 Invariant singular functions .....	19
1.3.2 Free real scalar field .....	22
1.3.3 Free complex scalar field .....	23
1.3.4 Free Dirac field .....	25
1.4 GENERAL CONSIDERATION IN THE HEISENBERG PICTURE	
1.4.1 Two-point functions .....	27
1.4.2 Asymptotic fields .....	31
1.4.3 Asymptotic states and asymptotic completeness .....	33
1.4.4 Reduction formula .....	35
1.5 SPONTANEOUS BREAKDOWN OF SYMMETRY	
1.5.1 Goldstone theorem .....	38
1.5.2 Goldstone model .....	40
1.5.3 Nambu-Jona-Lasinio model .....	43

Addendum 1.A DIRAC METHOD OF QUANTIZATION .....	44
<b>CHAPTER 2: ABELIAN GAUGE THEORY</b>	
2.1 UNQUANTIZED ELECTROMAGNETIC FIELD	
2.1.1 Maxwell theory .....	48
2.1.2 Coupling with charged fields .....	49
2.1.3 Lagrangian densities .....	51
2.2 GENERAL REMARKS ON COVARIANT QUANTIZATION	
2.2.1 Incompatibility between classical equations and quantum principles .....	54
2.2.2 Indispensability of indefinite metric .....	56
2.2.3 General remarks on subsidiary conditions .....	60
2.3 COVARIANT QUANTUM THEORY OF THE ELECTROMAGNETIC FIELD	
2.3.1 B-field formalism .....	63
2.3.2 Canonical quantization .....	64
2.3.3 Properties of the B-field and subsidiary condition .....	65
2.3.4 Free electromagnetic field .....	68
2.3.5 Vacuum expectation values .....	70
2.3.6 Asymptotic fields .....	73
2.3.7 Renormalized theory .....	76
2.3.8 Gaugeon formalism .....	78
2.4 MASSIVE VECTOR FIELD	
2.4.1 Proca formalism .....	80
2.4.2 B-field formalism of a massive vector field .....	82
2.4.3 Higgs model .....	86
2.4.4 Pre-Higgs model .....	91
2.4.5 Chiral gauge model .....	94
2.5 TWO-DIMENSIONAL MODELS	
2.5.1 Two-dimensional D functions .....	96
2.5.2 Two-dimensional massless scalar field .....	100
2.5.3 Two-dimensional massless Dirac field .....	107
2.5.4 Schwinger model .....	113
2.5.5 Pre-Schwinger model .....	120

2.5.6 Schroer model .....	122
Addendum 2.A ON THE EXISTENCE OF A CHARGED ASYMPTOTIC FIELD .....	125
<b>CHAPTER 3: NON-ABELIAN GAUGE THEORIES AND BRS TRANSFORMATION</b>	
3.1 HISTORICAL BACKGROUNDS: DIFFERENCE BETWEEN ABELIAN AND NON-ABELIAN GAUGE THEORIES .....	127
3.2 LOCAL GAUGE INVARIANCE IN CLASSICAL YANG-MILLS THEORY	
3.2.1 Local gauge transformations and covariant derivatives .....	130
3.2.2 Local gauge invariance and constraints - Second Noether theorem - .....	136
3.3 GAUGE FIXING AND FADDEEV-POPOV GHOSTS	
3.3.1 Deformation from abelian to non-abelian .....	141
3.3.2 FP ghost as Maurer-Cartan form .....	146
3.4 QUANTIZATION OF YANG-MILLS THEORY	
3.4.1 Canonical quantization of Yang-Mills theory .....	152
3.4.2 BRS charge, FP ghost charge and BRS algebra .....	156
3.4.3 Subsidiary condition, quantum Maxwell equation and symmetries .....	160
3.4.4 BRS invariance and Ward-Takahashi identities .....	165
3.5 SUPERALGEBRA STRUCTURES INVOLVING BRS CHARGE	
3.5.1 Anti-BRS symmetry .....	170
3.5.2 Extension of BRS algebra and its deformation by mass term ....	176
<b>CHAPTER 4: PHYSICAL CONTENTS OF QUANTIZED YANG-MILLS THEORY</b>	
4.1 PROOF OF THE POSITIVITY IN PHYSICAL SUBSPACE .....	182
4.1.1 General aspects .....	183
4.1.2 $Q_B$ -cohomology and representations of BRS algebra .....	184
4.1.3 Multi-particle structure and asymptotic fields .....	193
4.1.4 Quartet mechanism - Poincaré lemma for unphysical particle sectors - .....	198

4.1.5	Comments on subsidiary conditions in cases with non-simple gauge groups .....	207
4.2	SCATTERING THEORETICAL ANALYSIS OF SOME MODELS	
4.2.1	Higgs-Kibble model .....	210
4.2.2	Pure Yang-Mills theory without spontaneous symmetry breaking .....	221
4.3	OBSERVABLES IN YANG-MILLS THEORY	
4.3.1	Observables and BRS invariance as their criterion .....	227
4.3.2	Quantum Maxwell equation and structure of local observables - Local observables as group invariants - .....	235
4.3.3	Characterization of localized physical states as group invariants - Absence of localized colored physical states - .....	249
4.3.4	Confining quark-antiquark potential and cluster property .....	252
4.4	STRUCTURE OF GLOBAL GAUGE CURRENTS	
4.4.1	Mass of gauge bosons and Higgs mechanism .....	258
4.4.2	A criterion for color confinement .....	266
4.4.3	Color confinement from the viewpoint of quartet mechanism .....	270
4.4.4	Universality of electric charge in the electroweak theory .....	275

## CHAPTER 5: QUANTUM THEORY OF THE GRAVITATIONAL FIELD

5.1	INTRODUCTORY REMARK .....	281
5.2	CLASSICAL GENERAL RELATIVITY	
5.2.1	General coordinate transformation .....	287
5.2.2	Covariant derivative .....	289
5.2.3	Einstein theory .....	291
5.2.4	Second Noether theorem .....	293
5.3	QUANTUM LAGRANGIAN DENSITY	
5.3.1	Gravitational BRS transformation .....	297
5.3.2	Gauge fixing and FP-ghost Lagrangian densities .....	299
5.3.3	Field equations .....	302
5.4	EQUAL-TIME COMMUTATION RELATIONS	
5.4.1	Canonical (anti)commutation relations .....	304
5.4.2	Equal-time commutators involving no time derivative .....	305

5.4.3 Equal-time commutators involving one time derivative other than $\dot{b}_p$ .....	306
5.4.4 Equal-time commutators involving $\dot{b}_p$ .....	308
5.5 SYMMETRIES OF QUANTUM GRAVITY	
5.5.1 $GL(4)$ and BRS symmetries .....	309
5.5.2 Sixteen-dimensional Poincaré-like superalgebra .....	312
5.5.3 Noether supercurrents for chiral symmetry .....	315
5.5.4 Spontaneous breakdown of symmetries .....	317
5.6 GEOMETRIC COMMUTATION RELATION	
5.6.1 Tensorlike commutation relation .....	319
5.6.2 Quantum-gravity D function .....	320
5.6.3 Equal-time geometric commutation relation .....	324
5.6.4 Four-dimensional geometric commutation relation .....	329
5.6.5 Non-geometric terms .....	330
5.6.6 Commutation relation between supercoordinates .....	331
5.7 VIERBEIN FORMALISM	
5.7.1 Classical vierbein formalism .....	334
5.7.2 Local-Lorentz BRS transformation .....	337
5.7.3 Local-Lorentz gauge fixing .....	339
5.7.4 Equal-time commutation relations .....	341
5.7.5 Symmetries in the local-Lorentz part .....	344
5.7.6 Meaning of the Lorentz invariance of particle physics .....	345
5.8 UNITARITY AND THE DIVERGENCE PROBLEM	
5.8.1 Unitarity - Free-Lagrangian method - .....	348
5.8.2 Possibility of resolving the divergence problem .....	352
5.8.3 Elimination of the Schwinger term .....	355
5.8.4 Remarks and comments .....	357
5.9 MISCELLANEOUS TOPICS	
5.9.1 Coupling with gauge field .....	360
5.9.2 Various extensions .....	361
5.9.3 Extension of BRS symmetry .....	362
5.9.4 Supersymmetric extension of the vierbein formalism .....	364

**APPENDIX: MATHEMATICAL SUPPLEMENTS**

A.1 Some basic facts about Grassmann algebras, differential forms and cohomology .....	368
A.2 General postulates of the relativistic quantum field theory with an indefinite metric and their consequences .....	377
A.3 Symmetries, currents and charges – Goldstone theorem – .....	390
A.4 Asymptotic fields, asymptotic states and their behavior under the symmetry transformation .....	394
A.5 Properties of dipole functions and wave packet systems .....	401
REFERENCES .....	405
INDEX .....	423
