
Preface:

The text of this book was originally prepared to be a chapter in Volume B of the forthcoming edition of the INTERNATIONAL TABLES FOR CRYSTALLOGRAPHY and it will eventually appear as a chapter entitled: "Scattering From Mesomorphic Structures." I am grateful to Prof. Uri Shmueli of Tel Aviv University for inviting me to participate in this project on behalf of the INTERNATIONAL UNION OF CRYSTALLOGRAPHY. I would also like to express my gratitude to Prof. Carl Garland of MIT for reading a rough draft and suggesting that I have it published separately in a form that might result in a wider distribution. Others that I would like to thank for reading it and offering helpful comments include S. Chandrasekhar, J. Doucet, C. C. Huang, A. J. Leadbetter, A. M. Levelut, B. Ocko, R. Pindak, and E. Sirota.

I would also like to thank my several students and collaborators for their participation in the research program in our laboratory. Without their dedication I would never have become sufficiently knowledgeable to prepare this book. I am grateful to Ms. Lori Gevelinger for her help in typing, library research, and other matters involved in the preparation of this manuscript.

I owe a special debt of gratitude to Professors David Litster and Bob Birgeneau for their hospitality in allowing me

to learn modern X-ray techniques at MIT during my sabbatical in the 1978-1979 academic year.

I would also like to express my appreciation to the National Science Foundation, and Dr. Fred Stafford in particular, for the support for my research program: Grant NSF-DMR-85-13523. The Harvard Materials Research Laboratory supplied the basic funding for the construction and continuing operation of the X-ray laboratory that was constructed following the MIT sabbatical with the help of L. Sorensen: current Grant NSF-DMR-86-14003. In the initial phase of this research, partial support was also provided by the Department of Defense through the Joint Services Electronics Program: current contract N0014-84-K-0465.

I am especially grateful to my wife for her support during the several years of travel to one or another synchrotron and for the many other days when I might as well have been far from home.
