

CONTENTS

Preface	vii
Chapter 1: Introduction	1
1.1 Why quantum chromodynamics?	1
1.2 The QCD Lagrangian	2
1.3 Why Modeling?	5
1.4 The MIT model	6
1.5 Evolution of the MIT model	10
1.6 Why a soliton model?	11
1.7 The variegate world of solitons	12
Chapter 2: The Models	15
2.1 Origins	15
2.2 The Lagrangian	16
2.3 Parameters of the F-L model	21
Chapter 3: The Mean Field Approximation: Classical and Quantal	23
3.1 Field equations without gluons	23
3.2 Baryon bag states	25
3.3 Small amplitude oscillations	29
3.4 Quantum analogues of the mean field approximation	34
3.5 The coherent state	34
3.6 The general single mode approximation	37
Chapter 4: Projection and Boost	41
4.1 The center of mass problem	41
4.2 Momentum projection	43
4.3 Boost	46

9.3 Nonuniform system	113
9.4 Bag states: Gaussian moments expansion	115
Chapter 10: Many Bag Problem	121
10.1 Introduction	121
10.2 The lattice model	123
10.3 The Wigner-Seitz cell	123
10.4 Band filling	125
10.5 The uniform plasma	126
10.6 Numerical results	128
Chapter 11: Retrospect and Prospects	131
Appendix: Numerical Methods	133
A.1 Introduction	133
A.2 Non-linear differential equations	134
A.3 Nonspherical mean field solutions	137
A.4 Gluon propagator	138
References	141
Index	147

4.4	Variation after projection	48
4.5	Virial theorems	50
4.6	Numerical results	51
4.7	Projection following boost	54
Chapter 5: The Generator Coordinate Method		55
5.1	The Hill-Wheeler integral equation	55
5.2	The H-W differential equation	56
5.3	Example: the N - N interaction	59
5.4	Molecular and cluster model wave functions	61
5.5	Internal dynamics	65
5.6	Example: the nucleon as a composite	69
Chapter 6: One Gluon Exchange		75
6.1	Absolute color confinement	75
6.2	Chromo-electric confinement in an MIT cavity	76
6.3	Example of confinement: the flux tube	77
6.4	There is no color Van der Waals problem!	81
6.5	The linearized gluon propagator	82
6.6	One gluon exchange hyperfine structure	89
Chapter 7: Parameter Sets and Results		91
7.1	Parameterizing the model	91
7.2	Classical mean field approximation	91
7.3	The pion and dressing of the baryons	96
Chapter 8: A Chirally-Invariant Chromo-dielectric soliton model		99
8.1	Gluon confinement	99
8.2	More on the chromoelectrostatic self energy of a quark	100
8.3	Massless quarks	107
Chapter 9: Quantum Corrections and Renormalization		111
9.1	An effective model	111
9.2	Uniform system	112
