

Contents

Preface	vii
1. Introduction	1
2. Kinematic Variables	
§2.1 Notation and Conventions	7
§2.2 Light-Cone Variables	9
§2.3 Rapidity Variable	17
§2.4 Pseudorapidity Variable	24
3. Nucleon-Nucleon Collisions	
§3.1 Particle Production in Nucleon-Nucleon Collisions	27
§3.2 Baryon Energy Loss in an Inelastic Collision	34
4. Hard Processes in Nucleon-Nucleon Collisions	
§4.1 The Infinite-Momentum Frame	41
§4.2 Relativistic Hard-Scattering Model	43
§4.3 Counting Rules	49
§4.4 Application of the Hard-Scattering Model	54
§4.5 Direct Fragmentation Process	59
5. Particle Production in a Strong Field	
§5.1 Schwinger Particle Production Mechanism	63
§5.2 Particle Production Rate	70

6. Particle Production in Two-Dimensional Quantum Electrodynamics		
§6.1	Qualitative Description of QED ₂	77
§6.2	Relation between j^μ and A^μ in QED ₂	82
§6.3	Inside-Outside Cascade	93
§6.4	Rapidity Distribution from QED ₂	103
7. Classical String Model		
§7.1	The String Model of Hadrons	107
§7.2	The Yo-Yo Model of Stable Particles	112
§7.3	A Yo-Yo State in Motion	116
§7.4	The Symmetric Lund Model	118
§7.5	Lund Model for Nuclear Collisions	127
8. Dual Parton Model		
§8.1	Dual Resonance Model	132
§8.2	Pomeron Exchange	141
§8.3	Particle Production Processes	143
9. Quarks, Gluons, and Quark-Gluon Plasma		
§9.1	Quarks and Gluons	155
§9.2	Bag Model of a Hadron	159
§9.3	Quark-Gluon Plasma	162
§9.3.1	Quark-Gluon Plasma at High Temperatures	162
§9.3.2	Quark-Gluon Plasma with a High Baryon Density	170
10. Lattice Gauge Theory		
§10.1	Path Integral Method for a Single-Particle System	176
§10.2	Partition Function for a Single-Particle System	179
§10.3	Path Integral Method for a Scalar Field	181

Contents	xiii
§10.4 Partition Function for a Scalar Field	184
§10.5 Basic Quantities in Lattice Gauge Theory	187
§10.6 The Lagrangian and the Euclidean Action for QCD	195
§10.7 Euclidean Space and Minkowski Space Compared and Contrasted	205
§10.8 Fermion Part of the Euclidean Action	207
11. Results from Lattice Gauge Theory	
§11.1 The Wilson Loop	210
§11.2 The Order of a Phase Transition	218
§11.3 Mean-Field Approximation	223
§11.4 Numerical Results from Lattice Gauge Theory	237
§11.5 Lattice Gauge Calculations with Fermions	239
12. Nucleus-Nucleus Collisions	
§12.1 Multiple Collisions and Nuclear Stopping	249
§12.2 Glauber Model of Nucleus-Nucleus Collision	251
§12.3 Some Analytic Examples	260
13. High-Energy Heavy-Ion Collisions and Quark-Gluon Plasma	
§13.1 Nuclear Stopping Power and the Baryon Content	265
§13.2 Bjorken's Estimate of the Initial Energy Density in High-Energy Nucleus-Nucleus Collisions	271
§13.3 Hydrodynamics of the Quark-Gluon Plasma	281
14. Signatures for the Quark-Gluon Plasma (I)	
§14.1 Dilepton Production in the Quark-Gluon Plasma	292
§14.2 Dilepton Production from Other Processes	317
§14.2.1 Drell-Yan Process	317

§14.2.2	Drell-Yan Process in Nucleus-Nucleus Collisions	328
§14.2.3	Dilepton Production from Hadrons and Resonances	330
§14.2.4	Dileptons from the Decay of Charm Particles	337
§14.3	Spectrum of Dileptons	339
15.	Signatures for the Quark-Gluon Plasma (II)	
§15.1	Debye Screening in the Quark-Gluon Plasma	344
§15.2	J/ψ Suppression in the Quark-Gluon Plasma	354
§15.3	Experimental Information on J/ψ Production and J/ψ Suppression	357
§15.4	J/ψ Suppression in Hadron Environment	360
§15.5	Transverse Momentum Distribution of J/ψ Particles	377
16.	Signatures for the Quark-Gluon Plasma (III)	
§16.1	Photon Production in the Quark-Gluon Plasma	382
§16.2	Photon Production by Quark-Antiquark Annihilation	384
§16.3	Photon Production by $q\bar{q}$ Annihilation in the Plasma	392
§16.4	Photon Production by the Compton Process	403
§16.5	Photon Production in the Plasma due to the Compton Process	409
§16.6	Photon Production by Hadrons	422
§16.7	Photon Production by Parton Collisions	426
§16.8	Experimental Information on Photon Production	427
17.	Signatures for the Quark-Gluon Plasma (IV)	
§17.1	The Hanbury-Brown-Twiss Effect of Intensity Interferometry	431
§17.2	Pion Momentum Correlations from Chaotic Sources	432
§17.3	Coherent and Partially Coherent Sources	451
§17.4	Experimental Information on Pion Interferometry	459

Contents	xv
18. Signatures for the Quark-Gluon Plasma (V)	
§18.1 Strangeness Content in Matter at Thermal and Chemical Equilibrium	476
§18.2 Rate of Approach to Chemical Equilibrium in a Quark-Gluon Plasma	487
§18.3 Experimental Information on Strangeness Production	499
19. Summary	505
Index	511
