Preface	vii
I Preliminaries	1
1 Introduction	3
1.1 History	3
1.2 Four-Fermi interaction	5
1.2.1 Modern form of four-Fermi interaction	5
1.2.2 Problems with the four-Fermi interaction	8
1.3 Symmetries and forces	9
1.3.1 Global symmetries	9
1.3.2 Local symmetries	10
1.3.3 Spontaneous breaking of symmetries	12
1.4 Renormalizability and anomalies	16
References	17
2 The standard model and the neutrino	19
2.1 Gauge interactions in the Standard model	20
2.2 Neutral current interactions of neutrinos	24
2.3 Neutrino scattering in the Standard model	26
2.3.1 $\nu_e e$ and $\widehat{\nu}_e e$ scattering	26
2.3.2 $\nu_\mu e$ and $\widehat{\nu}_\mu e$ scattering	28
2.3.3 $\nu_e N$ and $\widehat{\nu}_e N$ scattering	29
2.3.4 Neutrino pair production	30
2.4 Neutrino mass in the standard model	31
References	33

3	Massive neutrinos	35
3.1	Motivations for neutrino mass	35
3.1.1	Theoretical motivations in Particle physics	36
3.1.2	Motivations from Astrophysics and Cosmology	37
3.2	Questions related to neutrino mass	40
3.3	Tests of neutrino mass	41
3.3.1	Kinematic tests	41
3.3.2	Exclusive tests	42
	References	44
4	Dirac vs. Majorana masses	46
4.1	Two-component spinor field	46
4.2	Mathematical definition of a Majorana field	49
4.3	Different representations of Dirac matrices	52
4.3.1	Dirac representation	54
4.3.2	Majorana representation	54
4.3.3	Other representations	55
4.4	Majorana neutrinos and discrete symmetries of space-time	56
4.4.1	Properties under C	56
4.4.2	Properties under CP	58
4.4.3	Properties under CPT	59
4.5	The Majorana basis of mass terms	60
4.6	Diagonalization of fermion mass matrices	64
	References	66
II	Models of neutrino mass	67
5	Neutrino mass in $SU(2)_L \times U(1)_Y$ models	69
5.1	Models with enlarged fermion sector	69
5.1.1	A simple model with Dirac neutrinos	70
5.1.2	Neutrino mixing	71
5.1.3	Shortcomings of the model	71
5.1.4	The complete model with right handed neutrinos	72
5.2	Models with expanded Higgs sector	76

5.2.1 Adding a triplet Δ 77

5.2.2 Model with a singly charged singlet 79

5.2.3 Model with doubly charged singlet 82

5.3 The method of flavor diagrams 83

5.4 Models with spontaneous $B - L$ violation 86

5.4.1 Constraints on Majoron models 86

5.4.2 Majoron in the model with right-handed neutrinos 89

5.4.3 Majorons in models with extended Higgs sector . . 91

References 94

6 Neutrino mass in Left-Right symmetric models 96

6.1 The gauge sector 97

6.1.1 Symmetry breaking 97

6.1.2 Constraints on the masses of the gauge bosons . . 102

6.2 Majorana neutrinos 105

6.2.1 The see-saw mechanism 105

6.2.2 Constraints on the eV-keV-MeV spectrum 107

6.3 Physics involving right-handed neutrinos 110

6.3.1 Flavor changing neutral currents 111

6.3.2 Decay of the right-handed neutrinos 112

6.4 Naturalness of the see-saw formula 115

6.5 Dirac neutrinos 117

References 120

7 Neutrino mass in Grand Unified models 123

7.1 $SU(5)$ 124

7.2 Neutrino masses in $SU(5)$ model 126

7.3 $SO(10)$ 128

7.4 Neutrino mass in $SO(10)$ models 132

7.5 Neutrino masses in E_6 139

References 142

8	Kinematic tests of the neutrino mass	147
8.1	Beta decay and the mass of the ν_e	147
8.2	Pion decay and the mass of the ν_μ	151
8.3	Taon decay and the mass of the ν_τ	152
8.4	Other processes	153
8.4.1	Electron capture: mass of the ν_e	153
8.4.2	Kaon decay: mass of the ν_τ	153
	References	154
9	Neutrino oscillations	155
9.1	Neutrino oscillations in vacuum	155
9.1.1	Theory of neutrino oscillations	156
9.1.2	Experimental searches of neutrino oscillations	158
9.1.3	Atmospheric neutrinos	163
9.2	Oscillation with unstable neutrinos	163
9.3	Neutrino oscillations in matter	165
	References	171
10	Electromagnetic properties of neutrinos	173
10.1	Electromagnetic form factors of a neutrino	174
10.1.1	Form factors of a Dirac neutrino	175
10.1.2	Form factors of a Majorana neutrino	176
10.1.3	Form factors for a Weyl neutrino	178
10.2	Kinematics of radiative decays	179
10.3	Model calculations	181
10.3.1	$SU(2)_L \times U(1)_Y$ model with Dirac neutrinos	181
10.3.2	$SU(2)_L \times U(1)_Y$ models with Majorana neutrinos	186
10.3.3	Left-right symmetric model	189
10.4	Large magnetic moment and small neutrino mass	193
	References	196
11	Double beta decay	198
11.1	Introduction	198
11.2	Kinematical properties	200
11.3	Neutrinoless double beta decay in $SU(2)_L \times U(1)_Y$ models	204

11.3.1	Light Majorana neutrino exchange	204
11.3.2	Heavy Majorana neutrino exchange	207
11.3.3	Exchange of doubly charged Higgs boson	208
11.4	Neutrinoless double beta decay in Left-Right models . . .	209
11.4.1	Light neutrino exchange	209
11.4.2	Heavy Majorana neutrino exchange	210
11.4.3	Left-right mixing contribution	211
11.4.4	Higgs exchange contribution	212
11.5	Majoron emission in $\beta\beta_{0\nu}$ decay	212
11.6	Neutrino mass and $\beta\beta_{0\nu}$ decay	214
	References	216
12	Related processes	218
12.1	Lepton flavor changing processes	218
12.1.1	Radiative decays of muon and taon	218
12.1.2	Decays of μ and τ into charged leptons	221
12.1.3	Muonium-antimuonium transition	224
12.1.4	Semi-leptonic processes	227
12.2	CP-violation in the leptonic sector	229
12.2.1	CP-violating phases in the fermion mass matrix	229
12.2.2	Electric dipole moment of the electron	231
	References	234
IV	Astrophysics and Cosmology	237
13	Solar neutrinos	239
13.1	Solar neutrinos	240
13.1.1	Source of neutrinos in the sun	240
13.1.2	Detection of solar neutrinos	242
13.2	The solar neutrino puzzle	244
13.3	Solar neutrino puzzle and neutrino properties	247
13.3.1	Neutrino oscillation	247
13.3.2	Neutrino decay	253
13.3.3	Magnetic moment of the neutrino	254

13.4 Implications for Particle Physics	258
References	259
14 Neutrinos from Supernovae	262
14.1 Qualitative picture of supernova collapse	262
14.2 Flux of supernova neutrinos	264
14.3 Neutrino properties implied by SN1987A observations . .	268
14.3.1 Neutrino mass	269
14.3.2 Neutrino lifetime	270
14.3.3 Magnetic moment of the neutrino	270
14.3.4 Electric charge of neutrino	273
14.3.5 Strength of right-handed weak interactions	274
14.3.6 Radiative decay of neutrinos	275
14.3.7 Test of weak equivalence principle for neutrinos . .	277
References	278
15 Neutrino cosmology	280
15.1 The Big Bang model	280
15.2 Nucleosynthesis and the number of neutrino species . . .	284
15.3 Constraints on stable neutrino masses	288
15.3.1 Bounds on light neutrino masses	289
15.3.2 Heavy stable neutrinos	290
15.4 Constraints on heavy unstable neutrinos	293
15.5 Limits for radiative neutrino decays	295
15.6 Limits on right handed interactions	299
15.7 Neutrinos and dark matter in the universe	301
15.7.1 Galactic halos and neutrinos	301
15.7.2 Galaxy formation and neutrinos	305
References	307
A Exercises	309
B Addenda	314
Index	315
