## CONTENTS

Introduction	1
<b>Part I. Field Theory</b>	
1. Field-Theoretic Approach to Second-Order Phase Transitions in Two- and Three-Dimensional Systems <i>J. Stat. Phys.</i> <b>23</b> , 49 (1980)	7
2. On Non-Renormalizable Interactions From <i>New Developments in Quantum Theory and Statistical Mechanics</i> , eds. Levy & Mitter (Plenum Press, 1977)	41
3. An Introduction to Scaling Violations From <i>Weak Interactions and Neutrino Physics</i> , ed. J Tran Thanh Van (Eleventh Rencontre de Moriond, 1976)	66
4. The Physical Basis of the Asymptotic Estimates in Perturbation Theory From <i>Hadron Structure and Lepton-Hadron Interactions</i> , ed. M. Levy <i>et al.</i> (Plenum Press, 1979)	98
5. Critical Exponents and Large-Order Behavior of Perturbation Theory (with E. Brezin) <i>J. Stat. Phys.</i> <b>19</b> , 269 (1978)	119
6. The Borel Transform and the Renormalization Group <i>Phys. Rep.</i> <b>49</b> , 215 (1979)	143
7. Singularities of the Borel Transform in Gauge Theories (Previously unpublished)	148
8. On Infrared Divergences <i>Nucl. Phys.</i> <b>B150</b> , 163 (1979)	153
9. Quartic Oscillator (with R. Balian and A. Voros) From <i>Feynman Path Integrals</i> (Springer-Verlag, 1979)	163
10. Trace Identities for the Schroedinger Operator and the WKB Method From <i>The Riemann Problem, Complete Integrability and Arithmetic Applications</i> , eds. D. Chudnovsky & G. Chudnovsky (Springer-Verlag, 1982)	187
<b>Part II. Disordered Systems</b>	
11. An Introduction to the Statistical Mechanics of Amorphous Systems From <i>Recent Advances in Field Theory and Statistical Mechanics</i> , ed. J.B. Zuber & R. Stora (North-Holland, 1984)	195

12. Supersymmetric Field Theories and Stochastic Differential Equations (with N. Sourlas) <i>Nucl. Phys.</i> <b>B206</b> , 321 (1982)	245
13. Spin Glasses and Optimization Problems without Replicas From <i>Chance and Matter</i> , ed. J. Souletie <i>et al.</i> (North-Holland, 1988)	257
14. Spin Glass Theory From <i>Time Dependent Effects in Disordered Materials</i> , ed. R. Pynn & T. Riste (Plenum Press, 1987)	285
15. On the Emergence of Tree-Like Structures in Complex Systems From <i>Perspectives on Biological Complexity</i> , eds. O.T. Solbrig & G. Nicolis (IUBS, 1991)	298
16. On the Multifractal Nature of Fully Developed Turbulence and Chaotic Systems (with R. Benzi, G. Paladin & A. Vulpiani) <i>J. Phys.</i> <b>A17</b> , 3521 (1984)	336
<b>Part III. Simulations</b>	
17. Recent Progresses in Gauge Theories From <i>High Energy Physics 1980</i> , eds. L. Durand & L. Pondrom (AIP, 1981)	349
18. The Strategy for Computing the Hadronic Mass Spectrum <i>Phys. Rep.</i> <b>103</b> , 203 (1984)	387
19. Prolegomena to Any Future Computer Evaluation of the QCD Mass Spectrum From <i>Progress in Gauge Field Theory</i> , ed. G. 't Hooft <i>et al.</i> (Plenum Press, 1984)	396
20. A Short Introduction to Numerical Simulations of Lattice Gauge Theories From <i>Critical Phenomena, Random Systems, Gauge Theories</i> , eds. K. Osterwalder & R. Stora (North-Holland, 1986)	407
21. Principles of Numerical Simulations From <i>Fields, Strings and Critical Phenomena</i> , eds. E. Brezin & J. Zinn-Justin (North-Holland, 1989)	447
22. The APE Computer: An Array Processor Optimized for Lattice Gauge Theory Simulations (with M. Albanese <i>et al.</i> ) <i>Comput. Phys. Comm.</i> <b>45</b> , 345 (1987)	479
23. The APE-100 Computer: (I) The Architecture (with C. Battista <i>et al.</i> ) Submitted to <i>Int. J. High Speed Computing</i>	488
