

# CONTENTS

Chapter 1	Introduction	1
1.1	Amorphous Magnets	2
1.2	General Information and Definitions	5
	A. Ferromagnet	
	B. Ferrimagnet	
	C. Amorphous Magnets with Canted (Noncollinear) Spin Structures	
1.3	Hamiltonians and Exchange Interactions	13
1.4	The Structure of Amorphous Magnets	22
	A. Statistical Description of the Structure	
	B. Pair Correlation Function	
	C. Structural Model	
Chapter 2	Mean Field Theory and Fundamental Magnetic Properties	37
2.1	Statistical Thermodynamics	38
2.2	Simple Paramagnet	42
2.3	Mean Field Approximation	46
	A. Crystalline Ferromagnets	
	B. A Simple Model of Amorphous Magnets and Nonuniform Distribution of Local Fields	
2.4	Amorphous Ferrimagnets in the Mean Field Approximation	56
2.5	Phase Diagram	62
2.6	Antiferromagnetism	66
2.7	Ferrimagnetism	74
2.8	Anisotropy Energy, Bloch Wall and Coercivity	80
Chapter 3	Spin Excitations, Frustration and Dilution	91
3.1	General Theory of Spin Excitations in Ferromagnets	92
3.2	Spin Waves in Ferromagnets	97
	A. Crystalline Ferromagnets	
	B. Amorphous Ferromagnets	
3.3	Thermodynamics of Ferromagnets	105
3.4	Discussion on the Existence of Amorphous Antiferromagnets	110
3.5	Misfit and Frustration	116
3.6	Spin Glass Phase	121
3.7	Diluted Ferromagnets	128
3.8	Phase Diagram near Critical Concentration	135
Chapter 4	3d Metallic Magnetism	141
4.1	Tight Binding Approximation	143
	A. Ideal Crystal	
	B. Structurally Disordered System	

4.2	Density of States	150
	A. Ideal Crystal	
	B. Structurally Disordered System	
4.3	Electron-Electron Correlation	158
4.4	The Hubbard Model	162
4.5	Ferromagnetic States	168
4.6	Some Fundamental Properties in the Hartree-Fock Approximation	175
	A. Paramagnetic Susceptibility and Transition Temperature	
	B. Weak Ferromagnet; Wohlfarth Theory	
	C. Comparison with Landau Theory	
	D. Remarks	
4.7	Spin Fluctuations	184
	A. Spin Waves	
	B. Fluctuation	
Chapter 5	4f Magnetism	193
5.1	Indirect Exchange Interaction	194
	A. Free Electrons	
	B. Disordered Systems	
5.2	Crystal Electric Field	202
	A. Ideal Crystal	
	B. Amorphous System	
5.3	Effects of Random Anisotropy at T = 0 K	209
	A. Dominant Random Anisotropy	
	B. Finite Exchange Interactions	
5.4	Coercivity	215
5.5	Ferromagnetism and Sperimagnetism	220
	A. Ferromagnetism	
	B. Sperimagnetism of Amorphous $R_{1-x}Co_x$ Compounds (R = Heavy Rare Earths)	
5.6	Spin Excitations	227
Chapter 6	Magnetism of Amorphous Alloys	235
6.1	Saturation Moment	236
6.2	Curie Temperature	241
6.3	Some Aspects of Amorphous Ferromagnetism	249
	A. Rhodes-Wohlfarth Plot	
	B. Reduced Magnetization Curve	
	C. Spin Waves	
6.4	Random Anisotropy and Magnetism	261
6.5	Strong or Weak Itinerant Magnetism	269
6.6	Amorphous Ferrimagnets (1)	275
	A. On the Mean-Field Argument	
	B. Effective-Field Approximation	
	C. Amorphous Ferrimagnetic Insulators	
6.7	Amorphous Ferrimagnets (2)	287
	A. The Approach to Saturation Magnetization	
	B. Related Phenomena	

Chapter 7	Transport Phenomena	295
7.1	Ziman Theory in Liquid Metals	297
7.2	Electrical Conduction in Amorphous Solids	304
7.3	Resistivity Minimum	312
	A. Kondo-type Effect	
	B. Structural Effect	
	C. Magnetic Diffraction Model	
	D. On the Experimental Results	
7.4	Structural Stability of Metallic Glasses	328
Chapter 8	Critical Phenomena	335
8.1	Landau Theory of Phase Transition	337
8.2	Scaling Concept and Scaling Relations	345
8.3	Inverse Paramagnetic Susceptibility and Arrott Plot	352
8.4	Critical Exponents	359
	Bibliography	365
	Index	371
