

TABLE OF CONTENTS

| | |
|--|-------------|
| List of Figures | xiii |
| List of Tables | xvii |
| Foreword by T. D. Lee | xxi |
| Preface | xxv |
| Chapter 1: Genesis of Modern Particle Physics | 1 |
| §1.1 Historical introduction (prior to 1945) | 1 |
| §1.2 Startup period (1945–60): early contributions to the basic concepts of modern particle physics | 5 |
| §1.2a Quantum electrodynamics and the gauge principle | 6 |
| §1.2b Pion physics and dispersion theory | 8 |
| §1.2c Strange particle physics and global internal symmetries in strong interactions | 16 |
| §1.2d Weak interactions and baryon-lepton symmetry | 17 |
| §1.2e Yang-Mills fields and spontaneous symmetry breaking | 26 |
| §1.3 Heroic period (1960–75): formulation of the standard model of strong and electroweak interactions | 30 |
| §1.3a From quarks as “mathematical fictions” to quarks as “physical entities” | 30 |
| §1.3b From global $SU(3)$ quark flavor to gauged $SU(3)$ quark color (QCD) | 37 |

| | |
|--|------------|
| §1.3c From the global V-A charged baryon-lepton weak current theory to the gauged chiral quark-lepton flavor theory of the electroweak interaction (QFD) | 45 |
| §1.3d Summary of key properties of the standard model of particle interactions | 48 |
| §1.4 Period of consolidation and speculation (1975–90): precision tests of the standard model and theories beyond the standard model | 58 |
| §1.4a Experimental consolidation of the standard model (1975–90) | 60 |
| §1.4b Theoretical consolidation of the standard model (1975–90) | 63 |
| §1.4c Theoretical speculations beyond the standard model (1975–90) | 67 |
| Category A: Speculations within the framework of traditional quantum field theory | 68 |
| Category B: “Theory of Everything” (TOE) speculations | 72 |
| References | 81 |
| Chapter 2: Space-Time Symmetries in Quantum Field Theory | 91 |
| §2.1 Continuous space-time symmetries | 91 |
| §2.1a Invariance under space-time translations | 95 |
| §2.1b Invariance under space-time rotations | 96 |
| §2.1c Poincaré group | 106 |
| §2.2 Discrete symmetries | 109 |
| §2.2a Space inversion | 110 |
| §2.2b Charge conjugation | 115 |
| §2.2c Time inversion | 118 |
| §2.2d CPT theorem and the relation between spin and statistics | 123 |
| §2.3 Special topics in space-time symmetries | 129 |
| §2.3a Poincaré group and supersymmetry | 130 |
| §2.3b Scale invariance and the conformal group in four space-time dimensions | 138 |
| References | 143 |
| Chapter 3: Global Internal Symmetries and Their Spontaneous Breakdown | 146 |
| §3.1 Global Abelian internal symmetries | 146 |
| §3.2 Global non-Abelian internal symmetry groups | 153 |
| §3.2a $SU(2)$ isospin group and the pion-nucleon interaction | 157 |
| §3.2b $SU(2) \times U(1)_Y$ group and strange particles | 159 |
| §3.2c $SU(2)_F$ group and quark flavor model of hadrons | 160 |

| | |
|---|------------|
| §3.2d Mixed global $SU(6)$ quark flavor-spin group and “global color” | 166 |
| §3.3 Global chiral quark flavor symmetry group and current algebra | 170 |
| §3.4 Spontaneous breaking of global internal symmetries and the Goldstone theorem | 175 |
| §3.5 Some applications of current algebra to particle physics | 181 |
| §3.5a Goldberger-Treiman relation | 184 |
| §3.5b Linear sigma (σ) model of pions and nucleons | 185 |
| §3.5c Current algebra calculation of the light quark masses | 188 |
| §3.5d Adler sum rule for inelastic neutrino scattering on nucleons | 193 |
| References | 196 |
| Chapter 4: Gauge Symmetry Groups and Their Spontaneous Breakdown | 199 |
| §4.1 From global symmetries to dynamics in quantum field theory | 199 |
| §4.2 Abelian gauge theory of electromagnetism (QED) | 205 |
| §4.2a Dirac’s non-integral phase and the Aharonov-Bohm effect | 209 |
| §4.3 Non-Abelian gauge groups | 214 |
| §4.4 Spontaneous symmetry breaking (SSB) of gauge groups | 218 |
| §4.4a SSB of Abelian gauge groups and application to low temperature superconductivity | 219 |
| §4.4b SSB of non-Abelian gauge groups | 225 |
| §4.5 Regularization and renormalizability of gauge theories | 231 |
| §4.5a Renormalization and precision tests in QED | 244 |
| §4.5b Renormalization in non-Abelian gauge theories | 249 |
| §4.6 Dirac’s magnetic monopole and electric charge quantization | 255 |
| References | 263 |
| Chapter 5: Gauge Theory of the Strong Interaction (QCD) | 265 |
| §5.1 Massless quark limit in gauged $SU(3)$ color | 265 |
| §5.2 Asymptotic freedom in the unbroken $SU(3)$ color group (QCD) | 271 |
| §5.2a Renormalization group derivation of asymptotic freedom in QCD | 272 |
| §5.2b Breakdown of scale invariance, operator product expansion and Bjorken scaling | 281 |
| §5.2c Experimental evidence for Bjorken scaling, the quark-parton model and asymptotic freedom | 289 |
| §5.3 Color confinement in QCD | 309 |
| §5.3a Theoretical status of color confinement in QCD | 310 |

| | |
|---|------------|
| §5.3b Experimental evidence for quark confinement in QCD | 315 |
| §5.4 Special topics in QCD | 317 |
| §5.4a Proton spin problem in deep inelastic polarized muon-proton scattering | 318 |
| §5.4b Large N_C limit in QCD and the OZI rule | 322 |
| §5.4c Evidence for confined gluons and glueballs | 325 |
| §5.4d QCD sum rules | 328 |
| References | 331 |
| Chapter 6: Gauge Theory of the Electroweak Interaction (QFD) | 334 |
| §6.1 Universal (V-A) charged current theory of weak interactions | 334 |
| §6.2 Gauge theory of the electroweak interaction (QFD) | 339 |
| §6.3 Highlights of electroweak phenomenology | 349 |
| §6.3a Determination of ρ and $\sin^2 \theta_W$ from neutral weak current experiments | 349 |
| §6.3b Masses and decay widths of the weak gauge bosons and the number of neutrino species | 352 |
| §6.3c Properties of the Higgs boson | 358 |
| §6.3d Three generations of leptons and lepton charge conservation | 363 |
| §6.3e Three generations of quarks and the determination of the U_{CKM} mixing matrix | 367 |
| §6.3f Weak CP violation | 376 |
| §6.4 Special topics in QFD | 386 |
| §6.4a Rare kaon decays | 387 |
| §6.4b Neutrino masses, neutrino oscillations and the solar neutrino problem | 390 |
| §6.4c Dynamical symmetry-breaking origin of t quark and Higgs masses | 403 |
| References | 409 |
| Chapter 7: Chiral Gauge Anomalies in the Standard Model | 413 |
| §7.1 Chiral anomalies in four-dimensional quantum field theory | 413 |
| §7.2 Perturbative triangular axial and chiral gauge anomalies in quantum field theory | 417 |
| §7.2a Harmless global triangular axial QED anomaly | 419 |
| §7.2b Harmless global triangular axial QCD anomaly | 425 |
| §7.2c Harmful triangular chiral gauge anomalies and renormalizability of the standard model | 430 |
| §7.3 Non-perturbative global $SU(2)$ chiral gauge anomaly and self-consistency of the standard model | 438 |

| | |
|--|------------|
| §7.4 Perturbative mixed gauge-gravitational anomaly and its cancellation in the standard model | 443 |
| §7.5 Anomaly-free constraints on Weyl representations of the standard group | 446 |
| §7.6 Higgs breaking of the electroweak group and electric charge quantization (ECQ) | 450 |
| §7.7 Four-dimensional chiral gauge anomaly constraints beyond the standard model | 452 |
| References | 459 |
| Chapter 8: Unification of Strong and Electroweak Interactions | 461 |
| §8.1 Linkages between QCD and QFD | 461 |
| §8.2 Arguments for unification of QCD and QFD | 466 |
| §8.3 $SU(5)$ GUT and proton decay | 472 |
| §8.4 $B - L$ local symmetry, partial unification and $SO(10)$ GUT | 480 |
| §8.4a SSB of $SO(10)$ GUT via the left-right-symmetric (G_{422}) path | 486 |
| §8.4b Phenomenological tests of intermediate mass scales in $SO(10)$ GUT | 490 |
| §8.4c $SO(10)$ GUT with D parity | 497 |
| §8.5 E_6 grand unification | 501 |
| References | 506 |
| Chapter 9: Fermion Generation Problem and Preon Models | 508 |
| §9.1 Non-preon approaches to the fermion generation problem | 508 |
| §9.2 Similarities and differences between the composite preon and composite quark models | 516 |
| §9.3 Phenomenological lower limit on the preon metacolor scale | 524 |
| §9.4 Paradigmatic preon models of quarks and leptons (based on gauged metacolor and gauged metaflavor) | 527 |
| §9.4a $E_6(MC) \times SO(10)(MF)$ preon model | 532 |
| §9.5 “Realistic candidate” preon models of quarks and leptons | 540 |
| §9.5a Preon models with E_6 metacolor and $SU(N)$ ($17 \leq N \leq 21$) global metaflavor | 541 |
| §9.5b Preon models satisfying “tumbling complementarity | 546 |
| References | 557 |
| Chapter 10: Topological Conservation Laws | 559 |
| §10.1 “Noether” and topological conservation laws | 559 |
| §10.2 Topological solitons in field theory in $D = 2$ to $D = 4$ space-time dimensions | 564 |
| §10.2a Topological solitons in $D = 2$ space-time dimensions | 565 |

| | |
|--|------------|
| §10.2b Topological solitons in $D = 3$ space-time dimensions | 576 |
| §10.2c 't Hooft-Polyakov magnetic monopoles in $D = 4$ particle physics | 584 |
| §10.3 Instantons in Euclidean four-space | 591 |
| §10.3a Spontaneous breaking of B and L charge conservation by instantons and the sphaleron hypothesis | 605 |
| §10.3b $U(1)$ problem in QCD and its resolution with instantons | 610 |
| §10.3c Strong CP problem in QCD and the axion | 615 |
| §10.4 Homotopy groups and the index theorem | 623 |
| §10.4a Global $SU(2)$ chiral gauge anomaly and the index theorem | 624 |
| §10.4b Relation between triangular and global $SU(2)$ chiral gauge anomalies: even-odd rule | 631 631 |
| §10.4c Homotopy groups of simple compact Lie groups | 633 |
| §10.5 Topological (baryonic) solitons in the Skyrme model | 635 |
| §10.5a Non-linear σ model | 637 |
| §10.5b Topological solitons in the standard Skyrme model (SSM) | 641 |
| §10.5c Extended Skyrme model (ESM) with the “Wess-Zumino” term | 647 |
| References | 655 |
