**CONTENTS**

List of Publications	xi
<b>General Introduction: The Worlds of Science</b>	<b>1</b>
<b>Section A. Fundamental Issues in Hydrodynamics, Condensed Matter and Field Theory</b>	
<b>From Level to Level</b>	<b>7</b>
1. On Two Levels [114]	11
2. Hydrodynamic Equations and Correlation Functions [11] (with <i>P. C. Martin</i> )	13
3. The Electron-Phonon Interaction in Normal and Superconducting Metals [17]	64
4. Wave Function Fluctuations in Finite Superconductors [29]	100
5. The Application of Renormalization Group Techniques to Quarks and Strings [58]	104
6. Disorder Variables and Para-Fermions in Two-Dimensional Statistical Mechanics [74] (with <i>E. Fradkin</i> )	134
7. Computational Physics: Pluses and Minuses [115]	149
8. Cathedrals and Other Edifices [117]	151
9. From Neutrinos to Quasiparticles [124]	153
<b>Section B. Scaling and Phase Transitions</b>	
<b>On the Joys of Creation</b>	<b>157</b>
1. Scaling Laws for Ising Models Near $T_c$ [22]	165
2. Static Phenomena Near Critical Points: Theory and Experiment [26] (with <i>W. Götze, D. Hamblen, R. Hecht, E. A. S. Lewis, V. V. Palciauskas, M. Rayl, J. Swift, D. Aspnes, and J. W. Kane</i> )	175
3. Transport Coefficients Near Critical Points [30]	212
4. The Droplet Model and Scaling [38]	217
5. Critical Behavior. Universality and Scaling [39]	222
6. Scaling, Universality and Operator Algebras [54]	240
7. Teaching the Renormalization Group [62] (with <i>H. J. Maris</i> )	274
8. Scaling and Universality in Statistical Physics [135]	280

---

**Section C. Simulations, Urban Studies, and Social Systems**

<b>Models and Arguments</b>	<b>297</b>
1. Computer Display and Analysis of Urban Information Through Time and Space [37] (with <i>J. R. Voss and W. J. Bouknight</i> )	301
2. From Simulation Model to Public Policy: An Examination of Forrester's "Urban Dynamics" [42]	328
3. Public Policy Conclusions from Urban Growth Models [46] (with <i>H. Weinblatt</i> )	336
4. A Simulation Model of Urban Labor Markets and Development Policy [51] (with <i>B. Harrison and B. Chinitz</i> )	343
5. The Big, the Bad and the Beautiful [127]	378
6. Hard Times [152]	380

**Section D. Turbulence and Chaos**

<b>Questions without Answers</b>	<b>385</b>
1. Roads to Chaos [93]	391
2. Chaos: A View of Complexity in the Physical Sciences [113]	399
3. From Periodic Motion to Unbounded Chaos: Investigations of the Simple Pendulum [99]	430
4. Escape from Strange Repellers [96] (with <i>C. Tang</i> )	435
5. Global Universality at the Onset of Chaos: Results of a Forced Rayleigh-Benard Experiment [106] (with <i>M. H. Jensen, A. Libchaber, I. Procaccia and J. Stavans</i> )	439
6. Fractal Measures and Their Singularities: The Characterization of Strange Sets [109] (with <i>T. C. Halsey, M. H. Jensen, I. Procaccia, and B. I. Shraiman</i> )	443
7. Fractals: Where's the Physics [110]	454
8. Scaling and Multiscaling (Fractals and Multifractals) [141]	456
9. Complex Analytic Methods for Viscous Flows in Two Dimensions [107] (with <i>D. Bensimon, S. Liang, B. I. Shraiman, and C. Tang</i> )	484
10. On Complexity [119]	516
11. Interactive Computation for Undergraduates [131]	518
12. Scaling and Structures in the Hard Turbulence Region of Rayleigh Benard Convection [134]	520

---

13. Turbulence dans une Boîte [147]	528
<i>(with A. Libchaber, E. Moses and G. Zocchi)</i>	
14. Complex Structures from Simple Systems [149]	537
15. Bubble, Bubble, Boil and Trouble [151]	539
<i>(with D. H. Rothman)</i>	

Numbers in brackets refer to the numbers in the list of publications on pp. xi–xvii.
