

# Contents

<b>Preface</b> .....	v
<b>Chapter 1 Introduction</b> .....	1
1.1 The History of Group Testing .....	1
1.2 The Binary Tree Representation of a Group Testing Algorithm and the Information Lower Bound .....	5
1.3 The Structure of Group Testing .....	7
1.4 Number of Group Testing Algorithms .....	10
1.5 A Prototype Problem and Some Basic Inequalities .....	12
1.6 Variations of the Prototype Problem .....	17
References .....	18
<b>Chapter 2 General Algorithms</b> .....	19
2.1 Li's $s$ -Stage Algorithm .....	19
2.2 Hwang's Generalized Binary Splitting Algorithm .....	20
2.3 The Nested Class .....	23
2.4 $(d, n)$ Algorithms and Merging Algorithms .....	27
2.5 Some Practical Considerations .....	30
2.6 An Application to Clone Screenings .....	34
References .....	36
<b>Chapter 3 Algorithms for Special Cases</b> .....	38
3.1 Two Disjoint Sets Each Containing Exactly One Defective .....	38
3.2 An Application to Locating Electrical Shorts .....	43
3.3 The 2-Defective Case .....	48
3.4 The 3-Defective Case .....	53
3.5 When is Individual Testing Minimax? .....	56
3.6 Identifying a Single Defective with Parallel Tests .....	59
References .....	60

<b>Chapter 4 Nonadaptive Algorithms and Binary Superimposed Codes</b>	<b>62</b>
4.1 The Matrix Representation	62
4.2 Basic Relations and Bounds	63
4.3 Constant Weight Matrices and Random Codes	68
4.4 General Constructions	73
4.5 Special Constructions	78
References	87
<b>Chapter 5 Multiaccess Channels and Extensions</b>	<b>91</b>
5.1 Multiaccess Channels	92
5.2 Nonadaptive Algorithms	96
5.3 Two Variations	99
5.4 The $k$ -Channel	101
5.5 Quantitative Channels	105
References	105
<b>Chapter 6 Some Other Group Testing Models</b>	<b>107</b>
6.1 Symmetric Group Testing	107
6.2 Some Additive Models	109
6.3 A Maximum Model	115
6.4 Some Models for $d = 2$	118
References	123
<b>Chapter 7 Competitive Group Testing</b>	<b>126</b>
7.1 The First Competitiveness	126
7.2 Bisecting	128
7.3 Doubling	132
7.4 Jumping	134
7.5 The Second Competitiveness	138
7.6 Digging	140
7.7 Tight Bound	143
References	148
<b>Chapter 8 Unreliable Tests</b>	<b>149</b>
8.1 Ulam's Problem	149
8.2 General Lower and Upper Bounds	155
8.3 Linearly Bounded Lies (1)	160

8.4 The Chip Game .....	164
8.5 Linearly Bounded Lies (2) .....	168
8.6 Other Restrictions on Lies .....	172
References .....	175
<b>Chapter 9 Optimal Search in One Variable .....</b>	<b>177</b>
9.1 Midpoint Strategy .....	177
9.2 Fibonacci Search .....	179
9.3 Minimum Root Identification .....	183
References .....	190
<b>Chapter 10 Unbounded Search .....</b>	<b>193</b>
10.1 Introduction .....	193
10.2 Bentley-Yao Algorithms .....	195
10.3 Search with Lies .....	199
10.4 Unbounded Fibonacci Search .....	200
References .....	202
<b>Chapter 11 Group Testing on Graphs .....</b>	<b>203</b>
11.1 On Bipartite Graphs .....	203
11.2 On Graphs .....	205
11.3 On Hypergraphs .....	207
11.4 On Trees .....	212
11.5 Other Constraints .....	216
References .....	217
<b>Chapter 12 Membership Problems .....</b>	<b>218</b>
12.1 Examples .....	218
12.2 Polyhedral Membership .....	220
12.3 Boolean Formulas and Decision Trees .....	222
12.4 Recognition of Graph Properties .....	226
References .....	229
<b>Chapter 13 Complexity Issues .....</b>	<b>231</b>
13.1 General Notions .....	231
13.2 The Prototype Problem is in PSPACE .....	233

13.3 Consistency .....	234
13.4 Determinacy .....	236
13.5 On Sample Space $S(n)$ .....	237
13.6 Learning by Examples .....	243
References .....	244
<b>Index</b> .....	<b>245</b>
