

CONTENTS

Introduction	v
Foreword	vii
Preface	ix
1. High-Resolution Spectroscopy of Transient Molecules and its Applications to Molecular Dynamics	1
Eizi Hirota and Yasuki Endo	
2. Vibration-Rotation Spectra of Reactive Molecules: Interplay of Ab Initio Calculations and High-Resolution Experimental Studies	56
Hans Bürger and Walter Thiel	
3. Rotational Spectra of Symmetric Top Molecules: Correlation-Free Reduced Forms of Hamiltonians, Advances in Measuring Techniques, and Determination of Molecular Parameters From Experimental Data	116
K. Sarka, D. Papoušek, J. Demaison, H. Mäder and H. Harder	
4. Hot Bands in Infrared Spectra of Symmetric Top and Some Other Molecules. A Useful Tool to Reach Hidden Information	239
G. Graner and H. Bürger	
5. The Formation of Four-Fold Rovibrational Energy Clusters in H₂S, H₂Se, and H₂Te	298
Per Jensen, Gerald Osmann and Igor N. Kozin	
6. Phase Angles in the Matrix Elements of Molecular Spectroscopy	352
C. di Lauro and F. Lattanzi	

7. High-Resolution Infrared Spectroscopy and One-Dimensional Large Amplitude Motion in Asymmetric Tops: HNO_3 and H_2O_2	396
Jean-Marie Flaud and Agnès Perrin	
8. Extended Molecular Symmetry Groups: Symmetry Analysis of Molecules Consisting of Two Coaxial Rotors	461
Pavel Soldán	
9. Quantum-Mechanical Studies of Radiative Association Reactions: Formation of HeH^+, NeH^+ and ArH^+	516
W. P. Kraemer, M. Jušek and V. Špirko	
Index	555
