|---------------------------------------------------------------------------------------------|------|
| <b>Foreword</b>                                                                             | ix   |
| <b>Biography of A. D. Bazykin</b>                                                           | xiii |
| <b>Preface</b>                                                                              | xvii |
| <b>1. Ideas and Methods of Modeling Populations</b>                                         | 1    |
| <b>2. Dynamics of Isolated Populations</b>                                                  | 7    |
| 2.1. Free Population                                                                        | 7    |
| 2.2. Population with External Resources                                                     | 11   |
| 2.3. Harvested Populations                                                                  | 14   |
| <b>3. Predator-Prey Interactions</b>                                                        | 18   |
| 3.1. Volterra's Model and its Modifications                                                 | 18   |
| 3.2. Elementary Factors of Interactions                                                     | 21   |
| 3.2.1. Predation                                                                            | 21   |
| 3.2.2. Reproduction and Mortality of the Predator                                           | 25   |
| 3.2.3. List of Elementary Factors                                                           | 26   |
| 3.3. One-Factor Modifications of the Volterra Model                                         | 26   |
| 3.3.1. Nonlinear Reproduction, Competition and<br>Mortality of Prey                         | 27   |
| 3.3.2. Predator Saturation (Type II Trophic Function)                                       | 28   |
| 3.3.3. Nonlinear Predation at Small Prey Population Density                                 | 30   |
| 3.3.4. Predator Competition for Prey and Other Resources                                    | 30   |
| 3.3.5. Nonlinear Reproduction of the Predator at<br>Small Population Densities              | 31   |
| 3.3.6. Classification of Elementary Factors                                                 | 32   |
| 3.4. Two-Factor Modifications of The Volterra Model                                         | 32   |
| 3.4.1. Prey Competition and Predator Saturation                                             | 33   |
| 3.4.2. Prey Competition and Nonlinear Reproduction of<br>Prey at Small Population Densities | 35   |

|                                                                                                                   |     |
|-------------------------------------------------------------------------------------------------------------------|-----|
| 3.4.3. Nonlinear Predation at Small Prey Population Density and Predator Saturation (Type III Trophic Function)   | 38  |
| 3.4.4. Predator Competition for Other Resources and Predator Saturation                                           | 40  |
| 3.4.5. Predator Competition for Prey and Predator Saturation                                                      | 46  |
| 3.4.6. Nonlinear Predator Reproduction and Prey Competition                                                       | 50  |
| 3.4.7. Other Two-Factor Modifications                                                                             | 63  |
| 3.4.8. Lower Critical Prey Density                                                                                | 64  |
| 3.5. Three-Factor Modifications of the Volterra Model                                                             | 66  |
| 3.5.1. Predator Saturation, Nonlinear Predation (Type III Trophic Function) and Competition among Prey            | 66  |
| 3.5.2. Predator Saturation, Predator Competition for Resources Other than Prey, and Competition among Prey        | 67  |
| 3.5.3. Predator Saturation, Predator Competition for Prey and Competition among Prey                              | 81  |
| 3.5.4. Prey Competition and Competition among Predators for Resources Other than Prey (Type III Trophic Function) | 84  |
| 3.5.5. Lower Critical Prey Density and Competition among Prey                                                     | 85  |
| Appendix                                                                                                          | 91  |
| <b>4. Competition and Symbiosis</b>                                                                               | 101 |
| 4.1. Competition                                                                                                  | 101 |
| 4.1.1. Two Logistic Populations                                                                                   | 101 |
| 4.1.2. One of the Populations has a Lower Threshold Size                                                          | 103 |
| 4.1.3. Two Populations with Lower Threshold Sizes                                                                 | 105 |
| 4.2. Symbiosis                                                                                                    | 107 |
| 4.2.1. Protocooperation                                                                                           | 107 |
| 4.2.2. Mutualism                                                                                                  | 111 |
| Appendix                                                                                                          | 113 |
| <b>5. Local Systems of Three Populations</b>                                                                      | 117 |
| 5.1. Classification of Trophic Structures                                                                         | 118 |
| 5.2. Competition-Free Communities                                                                                 | 122 |
| 5.2.1. One-Predator–Two-Preys and Two-Predators–One-Prey                                                          | 122 |
| 5.2.2. System of Three Trophic Levels                                                                             | 124 |
| 5.2.3. Cell of a Trophic Net                                                                                      | 125 |
| 5.3. Competing Producers in a Three-Population Community with Trophic Relations                                   | 129 |
| 5.3.1. Community of Three Trophic Levels                                                                          | 129 |
| 5.3.2. Two-Predators–One-Prey                                                                                     | 130 |
| 5.3.3. Trophic Cell                                                                                               | 132 |
| 5.3.4. One-Predator–Two-Preys                                                                                     | 137 |
| 5.4. Lower Critical Density of the Producer in a System of Three Trophic Levels                                   | 153 |

|                                                           |            |
|-----------------------------------------------------------|------------|
