
CONTENTS

Volume I

General Introduction	ix
Historical Perspective	1
I. General Reviews — Concepts and Methodology	23
II. Some Fundamentals	115
III. Elementary Reactions — Examples	217
Covalent-Ionic Bond Dynamics	
Barrier Reactions: Saddle-Point Transition States	
Bimolecular Reactions	
Rydberg-State Reactions: Electron and Nuclear	
Time Scales	
Elementary OCIO Fragmentation: An Atmospheric	
Reaction	
IV. More Complex Reactions — Examples	351
Hydrogen-Atom Transfer	
Isomerization Reactions	
Consecutive Bond Breakage	
V. Solvation Dynamics	385
Elementary Reactions in Solvent Cages	
Reactions at High-Pressures: Gas to Liquid Interface	
Acid/Base Reactions in Clusters	
VI. Non-Reactive Systems	423
Molecular Structures and Potentials	
Bound-State Dynamics	
Coherence and the Uncertainty Principle	
VII. Ultrafast Electron Diffraction	459
Concept of the Approach	

Molecular Structures and Coherent Dynamics
Experimental Time Resolution and Applications

VIII. Control of Chemical Dynamics	511
Multiple-Pulse Phase Coherence	
Coherence Control	
Population Control	
Reaction-Yield Control	
General Index	561
About the Author	571

Volume II

General Introduction	ix
IX. Reaction Rates — Concept of Statistical and Non-Statistical Dynamics	575
Elementary Reactions	
More Complex Reactions	
Non-Statistical Dynamics	
Hydrogen-Bonded Systems	
Electron Transfer Reactions	
X. Energy Redistribution — Concept of Elementary IVR	703
Coherent Dynamics in Complex Systems	
Nature of IVR	
Impact of IVR on Reactions	
XI. Structures from Dynamics — Concepts of Rotational Coherence	749
The Approach	
Theoretical Description of the Phenomena	
Experimental Applications	
XII. Concept of Coherence	801
Coherence and Dephasing	
Experimental Approach	
Homogeneous Dynamics in Inhomogeneous Systems	

XIII. Publications of the Author and His Group (By Subject)	867
General Index	903
About the Author	913
