<b>Preface</b>	ix
<b>List of Symbols</b>	xiii
<b>Chapter 1. Survey of Principal Historical Developments</b>	1
1.1. From Special to General Relativity	1
1.2. Geometry as Part of Physical Theory	5
1.3. Quantum Theory and the Idea of Fundamental Length	9
1.4. Localizability and Renormalizability in Quantum Field Theory	12
1.5. Quantum Field Theory in Curved Spacetime	15
1.6. From Canonical Quantum Gravity to Superstrings	17
<b>Chapter 2. Classical Frame Bundles in General Relativity</b>	22
2.1. General Covariance under Coordinate Transformations	22
2.2. General Covariance and Classical Frame Bundles	26
2.3. Moving Frames in Principal Frame Bundles	31
2.4. Gauge Invariance in Associated Bundles	36
2.5. Connections and Gauge Transformations	39
2.6. Levi-Civita Connections and the Strong Equivalence Principle	47
2.7. The Einstein Field Equations and Canonical Gravity	53
<b>Chapter 3. Quantum Frames and Spacetime Localizability</b>	62
3.1. The Uncertainty Principle and Representations of the Galilei Group	62
3.2. Quantum Mechanics and Informational Completeness	68
3.3. Informationally Complete Nonrelativistic Quantum Frames	76
3.4. Sharp-Point Limits of Nonrelativistic Quantum Frames	82
3.5. Path Integration and Nonrelativistic Quantum Frames	88
3.6. Poincaré Covariance and Relativistic Quantum Localizability	95
3.7. Poincaré Covariance and Quantum Lorentz Frames	99
3.8. Fundamental Special-Relativistic Quantum Lorentz Frames	106
<b>Chapter 4. Quantum Geometry over a Classical Base Spacetime</b>	112
4.1. Quantum Frame Bundles and Associated Bundles	112
4.2. The Internal Hilbert Structure of Quantum Bundles	116
4.3. Connections on Affine Frame Bundles and Associated Bundles	121
4.4. Connections and Parallel Transport in Quantum Bundles	126
4.5. Quantum Tensorial Bundles and Quantum Metrics	130
4.6. Quantum-Geometric Propagation in Quantum Bundles	133
4.7. The Physical Meaning of Quantum-Geometric Propagation	139
4.8. Relativistic Causality of Classical and Quantum Propagation	145

<b>Chapter 5. Massive Quantum-Geometric Boson Fields</b>	153
5.1. Microcausality vs. Local Commutativity of Quantum Fields	153
5.2. Quantum Frame Fields and Microcausality	158
5.3. Second-Quantized Boson Frames in Fock Bundles	164
5.4. Propagators for Parallel Transport in Fock Bundles	168
5.5. Geometric Localization of Boson Field Exciton Modes	175
5.6. Quantum-Geometric Boson Field Propagation in Free Fall	184
5.7. Quantum Field Interactions and Relativistic Locality	193
5.8. Quantum-Geometric Propagation of Interacting Boson Fields	200
<b>Chapter 6. Massive Quantum-Geometric Fermion Fields</b>	212
6.1. Fock-Dirac Bundles and Bispinor Quantum Frame Fields	212
6.2. Standard Berezin-Dirac Quantum Superfibres	216
6.3. Quantum Berezin-Dirac Superfibre Bundles	221
6.4. Parallel Transport in Fock-Dirac Bundles	224
6.5. Geometrically Localized Fermion Field Supermodes	227
6.6. Quantum-Geometric Fermion Field Propagation	230
<b>Chapter 7. Massless Quantum-Geometric Gauge Fields</b>	233
7.1. Hilbert Space Representations of the Poincaré Group	233
7.2. Krein Space Representations of the Poincaré Group	236
7.3. Typical Krein Fibres for Spin-1 Bosons	241
7.4. Gupta-Bleuler Bundles for Multi-Photon States	245
7.5. Quantum-Geometric Propagation in Gupta-Bleuler Bundles	251
7.6. The Geometric Interpretation of Yang-Mills Gauge Fields	254
7.7. Global Gauge Transformations on Principal Bundles	257
7.8. BRST and Anti-BRST Operators on Spaces of Connections	260
7.9. The Quantum-Geometric Framework for Yang-Mills Fields	265
<b>Chapter 8. Quantum-Geometric Gravity</b>	271
8.1. Diffeomorphism and Poincaré Gauge Invariance in CGR	271
8.2. Basic Aspects of Quantum-Geometric Gravity	277
8.3. Superlocal Graviton States and Internal Gauges	281
8.4. Linearly and Circularly Polarized Graviton States	285
8.5. Quantum Gravitational and Berezin-Faddeev-Popov Frames	291
8.6. Quantum Gravitational Gauge Supergroups and Quantum Spacetime	295
8.7. Quantum Gravitational Connections and BRST Symmetries	303
8.8. Superlocal Quantum Gravitational and Matter Fields	307
8.9. Quantum-Geometric Evolution of Gravitational and Matter Fields	312
8.10. Summary and Conclusion	320
