

Contents

0.1	Preface	vii
1	The Problems of Mechanics	1
1.1	Newtonian Principles	1
1.2	A Specific Example	4
1.3	Mechanics and Geometry	11
1.4	Mechanics and Computer Algebra	12
1.4.1	The Paraboloid Revisited	13
1.4.2	Using Lists	19
1.5	Problems	24
1.5.1	Computer Algebra Problems	24
2	The Description of Motion	27
2.1	Space Organization	27
2.2	Standard Triads	32
2.2.1	Rotation Dyads	35
2.3	Direction Cosine Matrices	38
2.4	More About Dyads	43
2.5	Rates and Observers	45
2.6	Angular Velocity	48
2.7	Properties of Angular Velocity	51
2.7.1	Antisymmetry of Angular Velocity	51
2.7.2	Addition of Angular Velocities	52
2.7.3	Simple Angular Velocity	53
2.8	Angular Acceleration	56
2.9	Vector Representations	59
2.10	Sophia	63
2.10.1	Sophia Data Objects	64
2.10.2	Sophia in Action	72
2.10.3	Four Bar Linkage	74
2.11	Problems	76

3	Configuration and Motion	77
3.1	Primary Observers	77
3.2	Constraint	82
3.3	Velocity and Acceleration	87
3.4	Configuration Surface	95
3.5	Generalized Speeds and Partial Velocities	104
3.6	Orthogonality	114
3.7	Reciprocal Base Systems	115
3.8	Symbolic Manipulation	118
3.9	Super KMvectors	122
3.10	Kinematic Equations	124
	3.10.1 The Direct Kinematic Problem	124
3.11	Frame Fixed Velocity	132
3.12	Problems	140
4	Mass Point Mechanisms	145
4.1	Newtonian Dynamic Motions	145
4.2	The Dynamical Point Mechanism	147
	4.2.1 Application of Sophia	151
4.3	The Determination of Constraint Forces	154
	4.3.1 Orthogonal Complements	155
	4.3.2 Cotangent Vector Summation	157
	4.3.3 Internal Constraint Forces	158
4.4	Kane's Equations	163
	4.4.1 Inertial Frames of Reference	171
4.5	Acceleration Components	174
4.6	Lagrange's Equations	179
4.7	Example Mechanism	182
4.8	The Second Form	194
4.9	Problems	200
5	Dynamics of a Rigid Body	203
5.1	Characterization of a Rigid Body	203
5.2	Total Force and the Center of Mass	207
5.3	Moments of Inertia and Total Torque	212
5.4	Equivalent Force Systems	217
5.5	The Moment of Inertia Dyad	221
	5.5.1 Inertia Dyads and Sophia	229
5.6	Energy and Power	231
5.7	Screws	233
5.8	The Darboux Vector	237
5.9	The Constrained Rigid Body	242
	5.9.1 Kvector Notation	244

5.9.2	The Compound Pendulum	245
5.10	Computer Algebra	248
5.11	Problems	253
6	Redundant Variables	257
6.1	Simple Pendulum	257
6.2	The Reduction Algorithm	261
6.3	Computer Algebra	266
6.4	Nonholonomic Systems	275
6.4.1	A Simple Nonholonomic System	276
6.5	Typical Velocity Constraint Problems	278
6.5.1	The Knife Edged Pendulum	278
6.5.2	The Rolling Coin	283
6.6	Problems	287
7	Approximate Methods	291
7.1	Direct Expansion Methods	292
7.2	Partial Series Expansions	295
7.2.1	The Sophia Series Expansion Package	297
7.3	Impulsive Force Approximations	300
7.3.1	A Simple Collision Model	301
7.3.2	The Impulse Equation	303
7.3.3	The Restricted Double Pendulum	306
7.4	Problems	308
A	Sophia Command Assistance	311
A.1	Introduction	311
A.2	Installation of Sophia	311
A.3	Setting Frame Information	312
A.4	Declaring Functional Dependence	312
A.5	Evectors	313
A.5.1	Construction and Selection	313
A.5.2	Changing Representations	313
A.5.3	Algebra	313
A.5.4	Differentiation	314
A.5.5	Kinematic Quantities	314
A.5.6	Rigid Body Properties	315
A.5.7	Equipollent Systems and Screw Transformations	316
A.6	Redundant Coordinates	316
A.7	KMvectors	317
A.7.1	Construction and Selection	317
A.7.2	Algebra of KMvectors	317
A.7.3	Tangent Space Operations	317

A.7.4	KMvector Calculus	318
A.8	SKvectors	318
A.8.1	SKvectors Constructors and Selectors	318
A.8.2	SKvector Algebra	318
A.8.3	Linear Operators on SKvectors	318
A.8.4	Projection	319
A.8.5	The Direct Kinematic Problem	319
A.9	Series Expansions	320
A.10	Global Variables	321
A.11	Comments	321
B	Annotated References	323
B.1	Books	323
B.2	Computer Programs	327
	Index	329
	List of Figures	339
