

# CONTENTS

Introduction	i	
Chapter I.            Density Matrices in Quantum Mechanics		
I.1	Liouville's Original Equation in Classical Mechanics . . . . .	1
I.2	Wave Functions and Expectation Values in Quantum Mechanics . . . . .	4
I.3	Level Shift Operators on Hilbert space . . . . .	7
I.4	A Free Two Level System . . . . .	10
	(a) Possible results of measurements . . . . .	10
	(b) The level-shift operators . . . . .	11
I.5	The Quantum Mechanical Density Matrix . . . . .	13
	(a) Motivation for defining a density matrix . . . . .	13
	(b) Formal definition of the density matrix . . . . .	15
I.6	The Liouville - von Neumann equation of motion . . . . .	16
	(a) The equation of motion of the density matrix . . . . .	16
	(b) The Liouville - von Neumann equation in Liouville space . . . . .	18
	(c) The Formal Structure of the Liouville Operator . . . . .	19
I.7	Density Matrices for Continuously Irradiated $S = \frac{1}{2}$ spins . . . . .	22
	(a) The density matrix of a single free $S = \frac{1}{2}$ spin . . . . .	22
	(b) Irradiating an ensemble of free spins ( $S = \frac{1}{2}$ ) . . . . .	25
	(c) Calculating the density matrix by manipulation of operators . . . . .	26
	(d) Calculation with matrix representations . . . . .	28
	(e) Analytical calculation of Liouville space . . . . .	30
	(f) Matrix representations in Liouville space . . . . .	32
Chapter II.            Perturbative Relaxation Theory		
II.1	The Phenomenological Bloch Equations for Magnetic Resonance . . . . .	36
II.2	Applying the Bloch Equations . . . . .	39
	(a) No relaxation ( $T_2, T_1 \rightarrow \infty$ ) . . . . .	40
	(b) No irradiation ( $\omega_1 = 0$ ) . . . . .	41

	(c) Steady state CW irradiation . . . . .	44
II.3	Quantum Mechanical Treatment of Elementary Magnetic Resonance . . . . .	44
	(a) Approximate transition probabilities . . . . .	45
	(b) An exact quantum mechanical description . . . . .	46
II.4	Basic Concepts in Stochastic Processes . . . . .	49
II.5.	Approximate Treatments of Relaxation in Simple Cases . . . . .	55
	(a) Autocorrelation functions in time dependent perturbation theory . . . . .	55
	(b) The master equation for populations . . . . .	57
II.6	The Density Matrix Relaxation Theory . . . . .	59
	(a) A semi-classical derivation of a master equation for the density matrix . . . . .	59
	(b) Generalizations of the equation . . . . .	65
II.7	An Operator Form for the Master Equation . . . . .	67
Chapter III. Chemical Exchange		
III.1	The Classical Rate Equations . . . . .	75
III.2	The Quantum Mechanical Density Matrix Formalism . . . . .	80
	(a) The equation of motion for the density matrix . . . . .	80
	(b) Approximations for slow and fast exchange . . . . .	85
III.3	Invariance Properties of Exchanging Systems . . . . .	90
	(a) Invariance of the total spin $I_z$ projection . . . . .	90
	(b) Symmetries of the exchanging molecule . . . . .	97
	(c) Symmetries of the exchange process . . . . .	102
Chapter IV. Stochastic Relaxation Theory		
IV.1	Relaxation Due to Random Modulations of the Motion . . . . .	111
	(a) Random modulation of a classical oscillator . . . . .	111
	(b) Solution for the case of Markovian modulation . . . . .	114
	(c) Cumulant expansion for the relaxation function . . . . .	121
	(d) Relaxation behaviour as a function of the modulation rate . . . . .	125
IV.2	The Stochastic Liouville Equation - a Relaxation Function Approach . . . . .	127
	(a) The stochastic Liouville equation in classical mechanics . . . . .	127
	(b) The stochastic Liouville equation in quantum mechanics . . . . .	131
IV.3	The Stochastic Liouville Equation - a Distribution	

Function Approach . . . . .	132
(a) Derivation of the equation in classical mechanics . . . . .	132
(b) Derivation of the equation in quantum mechanics . . . . .	137
(c) Modification of the equation for a correct equilibrium solution . . . . .	142
 Chapter V.           Methods for Solving the Stochastic Liouville Equation	
 V.1 The Method of Cumulants . . . . .	145
(a) General form of the solution . . . . .	145
(b) Solving with the cumulant expansion for Gaussian modulation . . . . .	150
(c) Cumulant expansion for a Poisson process . . . . .	154
V.2 Discretization of the Stochastic Parameter . . . . .	157
(a) A finite difference approach to a diffusion-type SLE . . . . .	157
(b) Application to rotational diffusion . . . . .	162
(c) Application to CIDEP . . . . .	166
V.3 The Method of Eigenfunctions . . . . .	171
(a) Solution of the SLE in the general case . . . . .	171
(b) Solution for rotational diffusion . . . . .	173
V.4 Numerical Methods of Solution in the Eigenfunctions Method . . . . .	181
(a) The general computational scheme . . . . .	181
(b) Using the Lanczos algorithm for diagonalization . . . . .	184
(c) Using the conjugate gradients technique for inversion . . . . .	190
 Chapter VI.           Applications to CW Magnetic Resonance	
 VI.1 Doublet EPR - Isotropic Rotational Diffusion in Isotropic Solvents . . . . .	197
(a) Axially symmetric g-tensor - non-saturated lines . . . . .	198
(b) Asymmetric secular g-tensor - non-saturated lines . . . . .	202
(c) Axially symmetric g-tensor and hyperfine tensor - non-saturated lines . . . . .	203
(d) Asymmetric g-tensor - saturated line . . . . .	211
VI.2 Doublet EPR - More General Rotational Diffusion Problems . . . . .	215
(a) Anisotropic rotational diffusion in isotropic solvents . . . . .	215
(b) Rotational diffusion in anisotropic media . . . . .	217
VI.3 EPR of Photoexcited Triplets Undergoing Rotational Diffusion . . . . .	223
(a) Photoexcited triplet states - time dependence . . . . .	223
(b) Line shape theory for the general case . . . . .	229

	(c) Rate and anisotropy dependence of lineshapes . . . . .	240
VI.4	NMR Line Shapes for Rotational Diffusion in Symmetrical Systems . . . . .	248
	(a) Rotational diffusion combined with discrete jumps . . . . .	248
	(b) NMR line shapes for rotational diffusion in a symmetric potential . . . . .	249
Chapter VII. Applications to Multiple Excitation Methods		
VII.1	Multiple Resonance Methods . . . . .	252
	(a) Saturation and relaxation in the motional narrowing regime . . . . .	253
	(b) Electron-electron double resonance (ELDOR) . . . . .	258
	(c) Electron-nuclear double resonance (ENDOR) . . . . .	267
	(d) Saturation and relaxation in the slow motional regime . . . . .	275
VII.2	Two Dimensional Magnetic Resonance . . . . .	280
	(a) Calculation of the density matrix in a multiple pulse experiment . . . . .	280
	(b) Multiple pulse experiments on chemically exchanging systems . . . . .	283
	(c) Multiple pulse experiments on systems with rotational diffusion . . . . .	288
Chapter VIII. Experimental Methods		
VIII.1	Magnetic Resonance Spectroscopy: General . . . . .	294
VIII.2	Special Experimental Techniques . . . . .	295
	(a) Time-resolved EPR . . . . .	295
	(b) Direct-detection (CW) and Fourier transform (pulsed) EPR . . . . .	297
	(c) Multiple resonance methods: electron-nuclear and electron-electron double resonance (ENDOR and ELDOR) . . . . .	299
Appendix A. Angular Momentum in Quantum Mechanics . . . . . 301		
A.1	The Angular Momentum Operators . . . . .	301
A.2	Angular Momentum as the Generator of Rotations . . . . .	304
A.3	Matrix Representations for Angular Momentum . . . . .	307
Appendix B. Rotation Matrices . . . . . 311
