

CONTENTS

Preface	v
1. A Computational Market Model Based on Individual Action <i>Ken Steiglitz, Michael L. Honig, and Leonard M. Cohen</i>	1
2. Valuation of Network Computing Resources <i>Ross A. Gagliano and Phillip A. Mitchem</i>	28
3. An Equilibratory Market-Based Approach for Distributed Resource Allocation and Its Applications to Communication Network Control <i>Kazuhiro Kuwabara, Toru Ishida, Yoshiyasu Nishibe, and Tatsuya Suda</i>	53
4. Market-Oriented Programming: Some Early Lessons <i>Michael P. Wellman</i>	74
5. An Automated Auction in ATM Network Bandwidth <i>Mark S. Miller, David Krieger, Norman Hardy, Chris Hibbert, and E. Dean Tribble</i>	96
6. A Market Approach to Operating System Memory Allocation <i>Kieran Harty and David Cheriton</i>	126
7. Economic Models for Allocating Resources in Computer Systems <i>Donald F. Ferguson, Christos Nickolaou, Jakka Sairamesh, and Yechiam Yemini</i>	156
8. Metaphor or Reality: A Case Study where Agents Bid with Actual Costs to Schedule a Factory <i>Albert D. Baker</i>	184
9. Machining Task Allocation in Discrete Manufacturing Systems <i>Kevin J. Tilley</i>	224

10. Saving Energy Using Market-Based Control <i>Scott H. Clearwater, Rick Costanza, Mike Dixon, and Brian Schroeder</i>	253
11. The Use of Computer-Assisted Auctions for Allocating Tradeable Pollution Permits <i>Donald B. Marron and Carlton W. Bartels</i>	274
