

Contents

0.1	Keywords in C++	1
0.2	Fundamental Types of C++	2
0.3	C++ operators	3
1	Introduction	5
1.1	Aim of Object-Oriented Design and Programming	5
1.1.1	Information Hiding	6
1.1.2	Inheritance	7
1.1.3	Polymorphism	7
1.1.4	Templates	7
1.2	Why C++ ?	8
2	C++ Basics	9
2.1	Introduction	9
2.2	Structure of a Simple Program	10
2.3	Declarations	12
2.4	Control Statements	13
2.4.1	Celsius \leftrightarrow Fahrenheit	13
2.4.2	Compound Interest	16
2.5	Pointers	19
2.6	Arrays, Static and Dynamic Memory	21
2.7	Arrays of Pointers	30
2.8	Command-Line Parameters and Function Arguments	34
2.9	Simple File I/O and Simple Strings	40
2.10	Constants and Inline Functions	43
3	String Manipulations	45
3.1	Introduction	45
3.2	Digit Conversion to Character and String	46
3.3	Append a Character to a String	47
3.4	Searching for a Character in a Given String	48
3.5	Delete a Character from a String	49

3.6	Swapping Characters in a String	50
3.7	First n Characters from a String	51
3.8	Assignment and the Function strcpy	52
3.9	Permutations of a Word	53
3.10	String within String	55
3.11	Comparing Strings	57
3.12	Length of a String	60
3.13	Permutations of Characters in a String	61
3.14	Swapping Parts of a String	63
3.15	String Handling using Recursion	64
3.16	Concatenating Strings	66
3.17	Replacing a Substring in a String	68
3.18	Reversing the Characters in a String	70
3.19	Boyer and Moore's Algorithm	72
3.20	Subsets of a Given Set	75
3.21	Counting Characters and Digits in a Phrase	76
3.22	Counting Characters and Words in a Phrase	77
3.23	Centering Text	79
3.24	The Function getline	80
4	The Class Concept	81
4.1	Why Abstract Data Types Are Used	81
4.2	The Month Class	83
4.2.1	Constructors	84
4.2.2	Class Methods	86
4.2.3	Member Functions	86
4.2.4	Class Operators	87
4.2.5	Type Conversion Operators	91
4.2.6	Stream Access	91
4.3	The Date Class	92
4.3.1	General Design Ideas	93
4.3.2	Class Constants	94
4.3.3	Private Member Functions	95
4.3.4	Discussion of Some of the Remaining Date Methods	96
4.3.5	Listing of Complete Month and Date Classes	97
5	Function Templates	107
5.1	Introduction	107
5.2	Examples	109

6	Class Templates	119
6.1	Introduction	119
6.2	Examples	120
6.2.1	A Template Vector Class	120
6.2.2	A Template Stack Class	123
6.2.3	A Template Stack Class with Node	125
7	Sorting and Searching	129
7.1	Introduction	129
7.2	Largest Number in an Array	130
7.3	Quicksort and Bubblesort	131
7.4	Shellsort	133
7.5	Using the Function bsearch	137
7.6	Using the Function lsearch	138
7.7	Name Sorting	139
7.8	Name and Number Sorting Using Templates	143
7.9	Student Names and Student Numbers	148
7.10	Search for Names in a List	151
7.11	Names of Employees in a Table	153
7.12	The Divide-and-Conquer Methodology	155
7.13	Sorting Vectors	156
8	Useful Classes	159
8.1	Introduction	159
8.2	String Class	160
8.2.1	Introduction	160
8.2.2	Simple String Classes	161
8.2.3	Advanced String Classes	166
8.3	Vector Class	172
8.3.1	Introduction	172
8.3.2	Simple Vector Classes	173
8.3.3	Construction of an Advanced Vector Class	179
8.3.4	Listing of Vector Class	187
8.4	Matrix Class	196
8.4.1	Introduction	196
8.4.2	Arrays of Objects	197
8.4.3	Operators for Accessing Rows and Columns of Matrix	198
8.4.4	The Assignment Operator	199
8.4.5	Listing of Matrix Class	200

8.5	Linked Lists	209
8.5.1	Introduction	209
8.5.2	Simple Linked Lists	210
8.5.3	Singly Linked Circular List	212
8.5.4	Recursive List	214
8.5.5	Linked List and Templates	217
8.5.6	Linked List and Iterators	220
8.5.7	Intrusive List	229
8.5.8	Generalized Lists	235
8.6	Binary Trees	243
8.6.1	Introduction	243
8.6.2	A Simple Binary Tree	245
8.6.3	Binary Trees and Templates	248
9	File Manipulations	253
9.1	Introduction	253
9.2	Output to File	256
9.3	Reading String from File	258
9.4	Word Count in File	259
9.5	File Searching Program	260
9.6	Counting Characters in a File	262
9.7	Writing File to Another File	265
9.8	Binary File Operations	266
9.9	The Functions seekp and seekg	268
10	Application in Finance	269
10.1	Introduction	269
10.2	Payroll	270
10.3	Loan and Interest	272
10.4	Amortization	275
10.5	Calculating the Loan Period	278
10.6	The Floyd-Warshall Algorithm	280
10.7	Periodic Savings	283
10.8	Compound Amount	287
11	Application in Administration	291
11.1	Introduction	291
11.2	Names, Address and Inheritance	292
11.3	Line Editor and Nested Classes	295
11.4	Mergesort Applied to a List	302
11.5	Linked List of Strings	306
11.6	Data Encryption	310

11.7	Vector Class and a Dictionary	313
11.8	Spelling Checker	315
11.9	Huffman Code	319
11.10	Eliza	326
11.11	Histogram for Series of Numbers	331
11.12	Counting the Letters in a Phrase	333
11.13	The Farmer, Wolf, Goat and Cabagge Problem	339
11.14	Roman Numbers	346
11.15	Day of the Week	349
11.16	Gregorian Calender	350
11.17	Records	355
12	Applications in Statistics	363
12.1	Introduction	363
12.2	Arithmetic, Harmonic and Geometric Mean	364
12.3	Mean Value and the Standard Deviation	368
12.4	Data Fitting by Least Squares	371
12.5	Curve Fitting	376
12.6	Pseudo-Random Number Generator	382
12.7	Correlation Coefficient	385
12.8	Random Number Generator and π	387
12.9	Autocorrelation Function	392
13	Object-Oriented Analysis and Design	395
13.1	Introduction	395
13.2	Class Hierarchy Diagrams	396
13.3	Object-Relationship Diagrams	397
13.4	Operation Diagrams	399
14	Developing a Banking Package	403
14.1	Introduction	403
14.2	Abstract Design	403
14.2.1	Top-Level Design	403
14.3	C++-Implementation	403
14.3.1	The Bank Class	405
14.3.2	The Person and Client Classes	406
14.3.3	The Account Class and Its Descendents	407
14.4	The User-Interface and Program Functioning	409
14.5	Program Listing	410
	Bibliography	437
	Index	438
