

Contents

1	Low-level counting	1
1.1	Introduction	1
1.2	Fields of application	2
1.3	Detectors and systems	3
1.4	Selection of detection system	4
1.5	Sensitivity comparison	6
1.6	Recipes in low-level counting	7
1.7	Reporting low-level systems	10
1.8	Literature on low-level counting	12
2	History	15
2.1	Nuclear research	15
2.2	Detectors and instruments	19
2.3	History of low-level counting	21
3	Atomic nuclei and binding energy	27
3.1	Atomic nuclei	27
3.2	Isotopes	29
3.3	Atomic masses and binding energy	29
4	Radioactivity	31
4.1	Unstable nuclides and radioactivity	31
4.2	Alpha decay	33
4.3	Beta emission	34
4.4	Electron capture, EC	35
4.5	Gamma emission	36
4.6	Delayed gamma emission	36
4.7	Internal conversion, IC	37
4.8	X-rays following IC and EC	37
4.9	Fission	38
4.10	Origin of radioactive nuclei	39
4.11	Kinetics of radioactive decay	40
4.12	Serial transformations	41

5	Interaction of radiation with matter	43
5.1	Charged particles	43
5.1.1	Ionization of heavy particles	43
5.1.2	Ionization of electrons	46
5.1.3	Range of heavy particles	47
5.1.4	Absorption and range of beta particles	47
5.2	Bremsstrahlung	50
5.3	Cerenkov radiation	50
5.4	Gamma rays	51
5.4.1	Attenuation of gamma rays	51
5.4.2	Photoelectric effect	52
5.4.3	Compton effect	54
5.4.4	Pair production	56
5.4.5	Combined effects	56
5.5	Neutrons	56
5.5.1	Neutron cross section	57
5.5.2	Elastic scattering, thermalization	58
5.5.3	Capture of slow neutrons	59
5.5.4	Inelastic collisions	61
6	Our natural radioactive environment	63
6.1	Radioisotopes in the environment	63
6.2	Radiation from K, Th, U	63
6.3	K, Th and U in rocks and soil	65
6.4	Regional and local variations	66
6.5	Radon	67
6.6	Cosmogenic and man-made radioactivity	69
7	Cosmic rays	73
7.1	Cosmic rays and low-level counting	73
7.2	History of cosmic ray studies	73
7.3	Kinematics and theory of relativity	75
7.4	Cosmic rays in the atmosphere	76
7.5	Temporal intensity variations	79
7.6	Protons	80
7.7	Neutrons	81
7.8	π -mesons (pions)	82
7.9	Muons	83
7.10	Electron-photon cascades	86
7.11	Particle fluxes in the atmosphere	88
7.12	Cosmic rays in the laboratory and at shallow depth	90
7.13	Cosmic rays inside a shield	94

8	Radiation detectors	97
8.1	Introduction	97
8.2	General properties	98
8.3	Gas discharge detectors	99
8.3.1	Electric multiplication in gas	99
8.3.2	Categories of ionization gas detectors	101
8.3.3	Ionization chambers	105
8.3.4	Proportional counters	105
8.3.5	Gas proportional counters for internal samples	107
8.3.6	Gas proportional counters for external sources	107
8.4	Scintillation counters	107
8.4.1	Scintillators	107
8.4.2	Scintillation detector units	110
8.4.3	Organic scintillators	111
8.4.4	Inorganic scintillators	112
8.4.5	ZnS(Ag) scintillation alpha counters	113
8.5	Semiconductor radiation detectors	115
8.5.1	Properties of semiconductors	115
8.5.2	Germanium diodes	117
8.5.3	Silicone junction detectors	118
8.6	Neutron counters	119
9	Background: sources and components	121
9.1	Introduction	121
9.2	Background of beta and gamma detectors	122
9.2.1	Background components	122
9.2.2	External gamma radiation, $B_\gamma(Ex)$	123
9.2.3	Gamma contamination in shield and system components, $B_\gamma(Ct)$	123
9.2.4	Radon background, $B_\gamma(Rn)$	128
9.2.5	Contamination in detector wall, B_β	128
9.2.6	Secondary electrons and gamma rays, $B(Sr)$	130
9.2.7	Neutron component, B_N	132
9.2.8	Muon background, B_L	132
9.3	Background of alpha detectors	133
9.4	Electric disturbances	134
10	Measurement of contamination	137
10.1	Radioactive contamination in low-level systems	137
10.2	Alpha and beta surface activity	138
10.3	Gamma contamination	140
10.4	Radioactive contamination in lead	141

11 Background reduction	147
11.1 Optimum background reduction	147
11.2 Background and overburden	149
11.2.1 Overburden	149
11.2.2 Measurement of relative muon flux	150
11.2.3 Measurement of relative proton and neutron fluxes	152
11.3 Reducing external gamma radiation	153
11.3.1 Laboratories with reduced gamma flux	153
11.3.2 Absorption of external gamma radiation in the main shield	154
11.4 Reduction of radioactive contamination	156
11.4.1 Measurement of contamination inside the shield	157
11.4.2 ^{210}Pb in lead and acceptable concentrations	158
11.4.3 Inner layer of main shield	159
11.4.4 Innermost shielding layer	160
11.4.5 Reducing contamination in system components	160
11.5 Radon	163
11.6 Secondary gamma radiation	164
11.7 Neutrons	165
11.8 Guard counters and their background reduction	167
11.8.1 Types of guard counters	168
11.8.2 Guard counters and secondary radiation	169
11.8.3 External guard counters	171
11.9 Background reduction through pulse shape analysis	173
11.9.1 Pulse rise analysis in proportional counters	173
11.9.2 Pulse decay analysis in scintillation detectors	173
11.10 Background of alpha detectors	174
12 Germanium spectrometers	175
12.1 Low-level germanium spectrometers	175
12.2 Development of germanium detectors and systems	176
12.3 Development of ultralow-level Ge-spectrometers	177
12.4 General background features	179
12.5 Muons and secondary radiation	179
12.6 Gamma peaks	181
12.6.1 Sources and types of peaks	181
12.6.2 Energy and sources of gamma peaks	181
12.6.3 Neutron produced gamma peaks	181
12.7 Modern low-level Ge-spectrometers	186
12.8 Effect of inner shielding layer	190
12.9 Monte Carlo calculated muon spectrum	194
12.10 Anticoincidence background reduction	195
12.11 Background versus mass of germanium diodes	196
12.12 Future prospects	196

13 Gas proportional counter systems	199
13.1 Gas proportional counters	199
13.2 Design of internal gas proportional counters	200
13.2.1 Conventional counters	200
13.2.2 Oeschger counters	201
13.2.3 Multielement gas proportional counters	203
13.3 Gas counters for external solid samples	203
13.4 Passive and active shield	204
13.4.1 Counting characteristics and working voltage	205
13.5 Comparison of the backgrounds of different counters	208
13.6 Background components	209
13.7 Background: wall and gas components	211
13.8 Neutron background component	214
13.9 Background atmospheric effects	216
13.10 Background and total sensitive mass	220
13.11 Estimate of the background factor b	221
13.12 Background of counters of different sizes	222
13.13 Improved systems with external guard counters	222
14 Liquid scintillation counting systems	225
14.1 Introduction	225
14.2 Scintillation detection and design of systems	226
14.2.1 Photocathode efficiency and dark pulses	226
14.2.2 Two phototube systems	228
14.2.3 Single phototube systems	230
14.3 Scintillation processes	230
14.4 Background components	231
14.5 Atmospheric background fluctuations	237
14.6 Background reduction	239
14.7 Liquid scintillation alpha counting	242
14.7.1 Scintillation of alpha samples	242
14.7.2 Energy resolution	243
14.7.3 Pulse decay analysis	245
14.8 Future prospects	246
15 Other low-level counting systems	249
15.1 Introduction	249
15.2 Si(Li) detectors	249
15.3 ZnS alpha scintillation detectors	251
15.4 NaI scintillation detectors	253
15.5 CsI scintillation detectors	254
15.6 Phoswich detectors	258
15.7 Multicounter systems	259

15.7.1	Early development of multicounter systems	259
15.7.2	Gas proportional multicounters for external samples	260
15.7.3	Gas proportional multicounters for internal samples	261
15.7.4	Liquid scintillation multicounters	262
15.7.5	Multidetector systems with CsI scintillation counters	267
15.7.6	Multidetector systems with Si(Li) diodes	267
15.8	Compton suppression spectrometers	268
16	Non-radiometric methods and neutron activation analysis	271
16.1	Introduction	271
16.2	Acceleration mass spectrometry (AMS)	272
16.3	Inductively coupled plasma-mass spectrometry	275
16.4	Neutron activation analysis	277
17	Important applications of low-level counting	279
17.1	Radiocarbon dating	279
17.2	^{14}C dating with gas proportional counters	281
17.3	^{14}C dating with liquid scintillation counters	282
17.4	^{14}C dating with the AMS technique	283
17.5	Comparison of dating methods	283
17.6	Environmental tritium	284
17.6.1	Origin and occurrence of tritium	284
17.6.2	Electrolytic enrichment	285
17.6.3	Counting tritium	287
17.7	Mass spectrometric tritium measurements	288
17.7.1	Comparison of radiometric methods	288
17.7.2	Mass spectrometric tritium measurements	290
17.8	Measurement of radon	290
17.8.1	Introduction	290
17.8.2	Radon in air	291
17.8.3	Collecting radon from water	295
17.8.4	Detection systems for radon and its progeny	295
17.8.5	Comparison of sensitivity	300
18	Statistics	301
18.1	Random processes	301
18.2	The binomial distribution	302
18.3	Poisson and normal (Gaussian) distributions	303
18.4	Counting statistics	304
18.5	Significant activity	305
18.6	Distribution of time intervals	308
18.7	Statistics of energy resolution	308
