

# CONTENTS

<b>PREFACE</b>	<b>v</b>
<b>I. INTRODUCTION</b>	<b>1</b>
1. Description of experiments	1
2. The concept of physical system	3
3. Preparation and measurement	6
<b>II. STATES AND OBSERVABLES</b>	<b>10</b>
1. States and amplitudes	10
2. An example: spin 1/2	14
3. Observables	20
4. The density operator	24
<b>III. COMMENSURABILITY</b>	<b>30</b>
1. The spin example continued	30
2. Different kinds of measurement	32
3. Commensurable observables	34
4. The uncertainty relation	38
<b>IV. DYNAMICS</b>	<b>40</b>
1. The dynamical postulate	40
2. Schrödinger, Heisenberg and mixed pictures	43
3. An aside on functions of several observables	47
4. The hamiltonian	50
5. Equations of motion in the different pictures	53
6. An example	58

<b>V. GENERAL FORMULATION</b>	<b>62</b>
1. Generalization of the basic postulates	62
2. Dirac's formulation	65
3. Kinematical symmetries	68
4. The dynamics under a kinematical symmetry	69
5. The galilean transformations as kinematical symmetries	72
6. The generators of kinematical galilean transformations	78
7. Superselection rules	86
<b>VI. A PARTICLE IN ONE DIMENSION</b>	<b>89</b>
1. A particle without spin	89
2. The momentum operator	92
3. The velocity, the mass and the hamiltonian	94
4. An example: the harmonic oscillator	98
5. A particle in a constant force field	102
<b>VII. A SPINLESS PARTICLE IN THREE DIMENSIONS</b>	<b>106</b>
1. Position, momentum and the hamiltonian	106
2. Rotations, the orbital angular momentum	110
3. The angular momentum commutation relations	112
4. Spectral resolution of the orbital angular momentum	116
5. The free particle	119
6. The Wigner distribution function	121
7. The harmonic oscillator	123
8. The spinless particle in a general coordinate system	125
9. The particle in a central field	130
<b>VIII. DYNAMICAL SYMMETRIES AND CONSERVATION LAWS</b>	<b>133</b>
1. The dynamical symmetry transformations of quantum mechanics	133
2. Unitary transformations and constants of the motion	135
3. Space inversion, the parity observable	139
4. Time reversal	142
5. The galilean transformations as dynamical symmetries	145
<b>IX. A PARTICLE WITH SPIN</b>	<b>152</b>
1. Internal degrees of freedom and galilean invariance	152
2. Spin and rotations	156

3. The particle with spin	160
4. The hamiltonian of a particle with spin	165
5. Example: a neutral particle in a magnetic field	171
<b>X. SYSTEMS COMPOSED OF DIFFERENT SUBSYSTEMS</b>	<b>175</b>
1. The description of systems formed by different subsystems	176
2. A system of two different particles	177
3. Some useful representations	186
4. The state of a subsystem	190
5. Example: states of a particle in a magnetic field	195
<b>XI. SYSTEMS OF IDENTICAL PARTICLES</b>	<b>202</b>
1. The description of systems formed by two identical subsystems	202
2. Example: a system of two identical particles	209
3. The description of systems of many identical particles	213
4. Number representation of systems of identical particles	222
5. An assembly of bosons	223
6. An assembly of fermions	230
<b>APPENDIX A. FINITE-DIMENSIONAL VECTOR SPACES</b>	<b>234</b>
1. Basic definitions	234
2. Operators in unitary spaces	237
3. The spectral theorem	244
4. The tensor product	252
5. Antilinear operators	259
6. Wigner's theorem	260
<b>APPENDIX B. THE HILBERT SPACE</b>	<b>264</b>
1. Basic definitions, unbounded operators	264
2. The spectral theorem	267
3. Function space representation	278
<b>APPENDIX C. DIRAC'S FORMULATION IN THE HILBERT SPACE</b>	<b>281</b>
1. Tempered distributions	281
2. Generalization to an arbitrary Hilbert space	301
3. Dirac's formulation	303

<b>APPENDIX D. A REMINDER FROM CLASSICAL MECHANICS</b>	<b>312</b>
1. Canonical transformations	312
2. A reminder from classical mechanics	316
<b>NOTES</b>	<b>320</b>
<b>BIBLIOGRAPHY</b>	<b>325</b>
<b>INDEX</b>	<b>328</b>
