Preface	v		
Acknowledgement	v		
1. SODIUM AND WATER METABOLISM	1		
Osmolality	1		
Water homeostasis	2		
Sodium homeostasis	7		
Sodium depletion	9		
Sodium excess	10		
Water deficiency	12		
Water excess	14		
Disorders of the serum sodium	16		
Hyponatraemia	16		
Hyponatraemia	18		
Disorders of renal water excretion	20		
Polyuria	20		
Oliguria	23		
2. POTASSIUM	25		
Homeostasis	25		
Hyperkalaemia	27		
Hypokalaemia	30		
3. ACID-BASE AND BLOOD GASES	35		
Definitions	35		
Acid-base homeostasis	36		
Hydrogen ion metabolism	36		
Carbon dioxide metabolism	36		
Disturbances of acid-base regulation	40		
Metabolic acidosis	41		
Metabolic alkalosis	43		
Respiratory acidosis	45		
Respiratory alkalosis	47		
Mixed disturbances	48		
Evaluation of acid-base disorders	50		
Oxygen metabolism	53		
Abnormalities of the P_{O_2}	55		
Renal H^+ excretion:			
The modern view	58		
The alternative view	60		
4. MINERALOCORTICIDS	62		
Normal physiology	62		
Aldosterone	62		
The renin-angiotensin system	62		
Mineralocorticoid excess syndromes	66		
Mineralocorticoid deficiency syndromes	69		
5. THE KIDNEY AND RENAL DISEASE	72		
Normal physiology	72		
Concept of clearance	75		
Fractional excretion	76		
Chronic renal failure	76		
Acute renal failure	78		
Renal tubular disorders	80		
Renal tubular acidoses	81		
Proteinuria	83		
Nephrolithiasis	85		
6. CALCIUM	88		
Homeostasis	88		
Hypercalcaemia	92		
Hypocalcaemia	97		
Bone disease	99		
Markers of bone turnover	101		
7. PHOSPHATE	103		
Homeostasis	103		
Hyperphosphataemia	105		
Hypophosphataemia	106		
8. MAGNESIUM	108		
Normal metabolism	108		
Hypomagnesaemia	109		
Hypermagnesaemia	111		

9. URATE AND GOUT	114	12. PLASMA AND CSF PROTEINS (continued)	
Purine metabolism	114	Monoclonal hypergammaglobulinaemia	170
Urate metabolism	114	The acute phase proteins	174
Inborn errors of purine metabolism	116	CSF proteins	175
Hyperuricaemia	116		
Gout	118		
Hypouricaemia	121		
		13. ENZYMES IN DIAGNOSIS	177
10. GLUCOSE, LACTATE & KETONES	122	Enzymes of clinical import	178
Glucose metabolism	122	Alkaline phosphatase	178
Carbohydrate digestion and absorption	124	5'-Nucleotidase	181
Hormones regulating carbohydrate metabolism	125	Acid phosphatase	181
Hyperglycaemia	126	Prostate specific antigen	181
Diabetes mellitus	126	α -Amylase	181
Laboratory evaluation	131	Aspartate aminotransferase	182
Hypoglycaemia	133	Alanine aminotransferase	183
Laboratory evaluation	135	Gamma-glutamyl transferase	183
Ketogenesis	136	Creatine kinase	184
Lactic acid metabolism	139	Lactate dehydrogenase	185
		Cholinesterase	187
		Angiotensin converting enzyme	187
		Conditions associated with abnormal enzyme profiles	187
11. THE HEPATOBILIARY SYSTEM	143		
Bilirubin metabolism	143	14. PLASMA LIPIDS & LIPOPROTEINS	191
Hepatobiliary disease	146	Plasma lipids	191
Jaundice	147	Plasma lipoproteins	193
Hepatocellular disease	148	Plasma apolipoproteins	195
Cholestatic disease	150	Lipoprotein metabolism	197
Infiltrations	153	Lipids and cardiovascular disease	201
Cirrhosis	153	Investigation of the hyperlipidaemic patient	204
Alcoholic liver disease	154	Primary/secondary hyperlipidaemia	208
Drug-induced liver disease	155	The hypolipoproteinaemias	210
Fatty liver	155		
Laboratory evaluation	156		
Routine liver function tests	156	15. THE GASTROINTESTINAL TRACT	212
Specific aetiological tests	159	Gastric function	212
		Pancreatic function	212
12. PLASMA AND CSF PROTEINS	162	Intestinal function	214
Plasma proteins	162	Endocrine aspects of the gut	216
Plasma proteins in health and disease	163	Disorders of GIT function	217
Albumin	165	Laboratory evaluation of the malabsorption syndromes	220
The immunoglobulins	167	GIT hormone-secreting tumours	222
Polyclonal hypergammaglobulinaemia	170		

16. THE HYPOTHALAMUS AND PITUITARY GLAND	224	21. PORPHYRINS	278
The hypothalamic hormones	224	Haem synthesis and porphyrins	278
The pituitary hormones	225	Porphyrias	279
Disturbed function	229	Lead poisoning	281
		Laboratory evaluation of porphyrias	282
17. THE THYROID GLAND	233	22. BIOCHEMICAL SYNDROMES OF TUMOURS	284
Normal metabolism	233	Diagnosis of cancer	284
Autoimmune thyroid disease	235	Tumour markers	285
Thyrotoxicosis	236	Amines	286
Hypothyroidism	239	Hormones	286
The sick euthyroid syndrome	242	Enzymes	288
Drugs and the thyroid	242	Proteins	289
Thyroid function tests	243		
18. THE ADRENAL CORTEX	247	23. BIOCHEMICAL ASPECTS OF HYPERTENSION	291
Normal physiology	247	Causes and pathophysiology	291
Congenital adrenal hyperplasias	250	Laboratory evaluation	292
Hypocortisolism	251	Catecholamines and phaeochromocytoma	295
Hypercortisolism	257		
19. REPRODUCTIVE ENDOCRINOLOGY	262	24. INHERITED METABOLIC DISEASES	297
Normal physiology	262	Types of inheritance	297
Fetal sexual development	264	Inherited metabolic diseases	297
Puberty	264	Laboratory evaluation	306
The menstrual cycle	265	Prenatal diagnosis of carrier status	307
Pregnancy	266	Molecular testing	308
Lactation	267		
Menopause	267	25. NUTRITION, VITAMINS, TRACE ELEMENTS	311
Reproductive disorders	267	Assessment of nutritional status	311
Hypogonadism	267	Carbohydrates	312
Amenorrhoea	268	Fats	312
Hypergonadism	269	Proteins	312
Hirsutism and virilism	269	Vitamins	314
		Trace metals	318
20. IRON	271		
Homeostasis	271		
Iron deficiency	274		
Iron overload	276		

26. PREGNANCY, PRENATAL DIAGNOSIS AND INFERTILITY	320	28. THERAPEUTIC DRUG MONITORING AND TOXICOLOGY	344
Pregnancy: metabolic changes	320	Therapeutic drug monitoring	344
Feto-placental unit	321	Anticonvulsants	347
Biochemical monitoring during pregnancy	323	Antibiotics	348
Prenatal diagnosis of fetal defects	325	Cardiovascular drugs	348
Laboratory evaluation of infertility	327	Psychotropic drugs	348
		Bronchodilators	349
		Drug overdose and toxicology	349
		Evaluation of the unconscious patient	349
		Paracetamol	350
		Salicylates	351
		Ethanol	351
27. PAEDIATRIC CHEMICAL PATHOLOGY	330		
Renal function and electrolytes	330	Abbreviations	354
Calcium, phosphate, magnesium	333	Index	356
Glucose homeostasis	334	Index of Tables	390
Liver function	337	Index of Figures	392
Plasma proteins	340		
Ammonia	341
