

Contents

1	Introduction	1
1.1	Importance of Water	1
1.2	Means of Theoretical Study	3
1.3	Historical Review	6
1.4	Scope of This Book	9
2	Molecular Dynamics Methods	11
2.1	Basics	11
2.2	Interactions	14
2.3	Equations of Motion	25
2.4	Rotational Motion	31
2.5	Constraint Dynamics	35
2.6	MD in Isothermal Ensembles	42
2.7	MD in Isobaric Ensembles	46
2.8	MD at Constant Chemical Potential	50
2.9	Nonequilibrium Molecular Dynamics	52
3	Statistical Averages	59
3.1	Principles of Statistical Mechanics	59
3.2	Thermodynamic Properties	63
3.3	Free Energy Computations	66
3.4	Structure and Orientational Order	71
3.5	Time Correlation Functions	76
3.6	Transport Coefficients	80
3.7	Dielectric Theory	86
3.8	Error Analysis	92
4	Experimental Description of Water	97
4.1	Water Monomer	97
4.2	Ice	99
4.3	Structure and Dynamics of the Liquid	107
4.3.1	Scattering Techniques	108

4.3.2	Vibrational Spectroscopy	109
4.3.3	Non-Arrhenius Dynamics	112
4.3.4	Viscosity Anomalies	113
4.3.5	Other Dynamical Properties	117
4.4	Thermodynamic Properties of the Liquid	119
4.5	Dielectric Properties of the Liquid	121
4.6	Other Liquid State Properties	124
4.7	Interfacial Water	125
5	Theoretical Description of Water	129
5.1	Survey of Earlier Work	129
5.2	Analytical Approaches	131
5.2.1	Models for Pure Water	131
5.2.2	Models for Electrolyte Solutions	137
5.2.3	Models for Water near Surfaces	141
5.3	Molecular-Level Approaches	141
5.3.1	Hybrid Methods	142
5.3.2	Computational Limitations	143
5.3.3	Development of Potentials	144
5.4	Internal Degrees of Freedom	145
5.5	Dimer Interactions	149
5.6	Non-Additive Contributions	153
5.7	Potentials Based on <i>Ab Initio</i> Results	159
5.8	Empirical Models	163
5.8.1	One-Site Models	163
5.8.2	Three-Site Models	163
5.8.3	Four-Site Models	169
5.8.4	Five-Site Models	172
5.9	Summary of Models	175
6	Bulk Water Computations	179
6.1	Thermodynamics	179
6.2	Equilibrium Structure	183
6.3	Hydrogen Bonding Patterns	190
6.4	Dynamic Properties	194
6.5	Dielectric Properties	200
6.6	Molecular Geometry and Vibrations	206
6.7	System Size Dependence	210
6.8	Ice	212
6.9	Supercritical Water	213

7	Results for Aqueous Solutions	217
7.1	Hydrophilic/Hydrophobic Interactions	217
7.2	Solvent-Induced Interactions	218
7.3	Hydration Structure	221
7.4	Atomic Solutes and Alkanes	224
7.5	Organic Solutes	232
7.6	Single Ion Solutes	236
7.7	Salt Solutions	245
7.8	Like Ion Pairs in Solution	259
7.9	Aqueous Solutions of Biomolecules	262
7.10	Reactions in Aqueous Solutions	270
8	Computations for Water at Interfaces	273
8.1	Survey of Surface Properties	273
8.2	Liquid/Vapor Interface	276
8.2.1	Surface Tension	276
8.2.2	Surface Structure	277
8.2.3	Ions at Liquid/Vapor Interface	281
8.3	Pure Water Clusters	282
8.4	Aqueous Solute Clusters	284
8.5	Water Near Solid Surfaces	291
8.5.1	Potentials	292
8.5.2	Water-Ice Interface	295
8.5.3	Other Nonmetallic Surfaces	295
8.5.4	Metallic Surfaces	298
8.6	Water-Liquid Interfaces	308
9	Interfacial Water in Chemistry and Biology	315
9.1	Ionic Solutions at Interfaces	315
9.2	Hydrophobic Effects on Adsorption	318
9.3	Water in Micropores	321
9.4	Water near Macromolecular Surfaces	321
9.5	Biomembranes	323
9.6	Ion-Permeable Channels	325
9.7	Permeable Membranes	328
9.8	Microemulsions	330
9.9	Chemical Reactions at Interfaces	333
9.10	Model Dependencies	333
10	Water in Nonequilibrium States	339
10.1	Planar Couette Flow	339
10.2	Nonequilibrium Solvation	341
10.3	Field Applied MD Simulations	346

10.3.1 Dielectric Spectroscopy	346
10.3.2 Limitations on the Analytical Theory of Diffusion	347
10.3.3 Limitations on Computer Simulations of Diffusion	349
10.3.4 Applied Static Electric Fields	350
10.4 Water in Laser Fields	352
10.5 Aqueous Solutions in a Laser Field	358
10.6 Frequency Doubled Optical Stark Effect	362
10.7 The Inverse Faraday Effect	365
11 Massively Parallel Processing	369
11.1 Nomenclature	369
11.2 MD on MPP Machines	373
11.2.1 Lennard-Jones Fluid	374
11.2.2 MCY-F Water	377
11.3 Benchmarks	378
12 The Far Past and the Near Future	381
12.1 The Far Past	381
12.1.1 C. J. T. de Grotthuss	382
12.1.2 W. C. Röntgen	385
12.1.3 Importance of Past Work	388
12.2 The Near Future	388
12.2.1 Experimental—Bulk Water and Solutions	389
12.2.2 Experimental — Interfacial Water	390
12.2.3 Many-Body Effects	391
12.2.4 Non-Nearest-Neighbor Bonding	392
12.2.5 The Tetrahedral Network	394
12.2.6 Radial Distribution Functions	395
12.2.7 Systematic Testing of Models	395
12.2.8 Theoretical — Interfacial Water	395
Bibliography	397
Author Index	465
Subject Index	489
