Preface	vii
List of Figures	xiii
List of Tables	xvii
1 Introduction	1
2 General Properties of the Linear Polarizability	9
2.1 Basic Polarizability Relations	9
2.2 Scalar and Tensor Polarizabilities	11
2.3 Static and Dynamic Polarizabilities	15
2.4 Generalization of the Polarizability: the Scattering Tensor	19
2.5 Kramers-Krönig Relations and the Optical Theorem	24
2.6 The Stark Shift	28
3 Polarizable Systems	33
3.1 Elementary Particles	33
3.2 Atoms	35
3.2.1 Introduction	35
3.2.2 Fine and hyperfine structure	39
3.3 Small Molecules	41
3.3.1 Molecular symmetries	42
3.3.2 Diatomic molecules	43
3.3.3 Polyatomic molecules	53
3.4 Organic and Biological Molecules	58
3.5 Clusters	64
3.5.1 Metal clusters	66
3.5.2 Semiconductor clusters	76
3.5.3 Fullerenes	81
4 Theory	87
4.1 Overview	87
4.2 Oscillator Strengths and Sum Rules	89
4.2.1 Summation of oscillator strengths.	89
4.2.2 Sum rules.	90

4.2.3	Expression for the anisotropic case.	91
4.3	Hartree-Fock Method and Perturbation Theory	92
4.3.1	Hartree-Fock Equations.	92
4.3.2	Basis set expansions of Hartree-Fock wave functions.	93
4.3.3	Perturbation theory in the Hartree-Fock approximation.	95
4.3.4	Shielding factors.	96
4.4	Configuration Interaction	96
4.4.1	Configurations.	96
4.4.2	Size Limitations.	98
4.4.3	Calculation of Polarizabilities.	99
4.5	Density-Functional Theory	99
4.5.1	Basic theorem.	99
4.5.2	Extended Thomas-Fermi model.	100
4.5.3	Kohn-Sham formalism.	101
4.5.4	Calculation of polarizabilities.	102
4.6	Perturbative Corrections to the Hartree-Fock Hamiltonian	103
4.7	Many-Body Perturbation Theory	105
4.7.1	Many-body Green's functions and diagrams.	105
4.7.2	Self-energy and Dyson's equation.	106
4.7.3	Linear response theory.	110
4.7.4	Matrix RPA.	112
4.8	Molecular Additivity Methods	113
4.8.1	Bond and hybrid polarizability methods.	113
4.8.2	Atom dipole interaction theory.	115
4.9	Inclusion of Vibrational and Rotational Degrees of Freedom	115
4.10	Results from Specific Calculations	116
4.10.1	Helium atom	117
4.10.2	Sodium atom	118
4.10.3	Nitrogen molecule	118
4.10.4	Alkali clusters	118
4.10.5	Fullerene: C ₆₀	126
5	Experiment	129
5.1	Traditional Techniques	129
5.1.1	Dielectric constant measurements	129
5.1.2	Refractive index	130
5.1.3	Rayleigh scattering	133
5.1.4	Electro-optic Kerr effect	134
5.1.5	Beam deflection	136
5.1.6	E-H gradient balance	138
5.1.7	Atomic beam resonance	140

- 5.2 New Techniques 141
 - 5.2.1 M-lines 141
 - 5.2.2 Dispersive Fourier-transform spectroscopy 143
 - 5.2.3 Position sensitive time-of-flight 148
 - 5.2.4 Light force 151
 - 5.2.5 Atom interferometry 154
- 6 Manifestations of Polarization Properties 159**
 - 6.1 Optical Properties 159
 - 6.1.1 Light scattering: refractive index and optical absorption . . . 159
 - 6.1.2 Polarization forces 162
 - 6.1.3 Optical cooling and trapping of atoms 165
 - 6.1.4 Optical tweezers and light forces 171
 - 6.1.5 Nanostructure fabrication 174
 - 6.2 Long-range Interactions 176
 - 6.2.1 Interactions between charged and neutral particles 176
 - 6.2.2 Interactions between neutral particles 184
 - 6.2.3 Many-atom, macroscopic, and retarded interactions 189
 - 6.2.4 Long-range forces and the atomic force microscope 198
- 7 Conclusions 203**
- A Notation and Units 207**
- B Time-Dependent Perturbation Theory 209**
 - B.1 Off-Resonant Interaction with Light 209
 - B.1.1 Two-level system 209
 - B.1.2 Multi-level system 211
 - B.2 Near-Resonant Interaction with Light 212
- C Derivation of the Kramers-Krönig Relations 213**
- Bibliography 217**
- Index 242**
