Preface	ix
Nomenclature	xi
I THEORY AND PROBLEMS	1
1 Basic Concepts used for Description of Motion and Deformation of a Continuum	3
1 Lagrangian and Eulerian Description of Motion	3
2 Tensors and their Cartesian Components	9
3 Curvilinear Coordinate Systems	13
4 Deformation. Deformation Rate. Vorticity.	26
5 Principles of Symmetry and Tensor Functions.	43
2 General Laws and Equations of Continuum Mechanics	49
6 Summary of General Laws and Equations	49
7 Mass Conservation Law. Continuity Equation.	52
8 Stress Tensor	55
9 Differential Equations of Motion and Equilibrium	63
10 Using the Conservation Laws in Integral Form for Calculation of Forces and Moments Acting on Bodies Moving in a Fluid (Control Surface Method)	69
11 Angular Momentum Equations.	77
3 Thermodynamics of Continua	85
12 Basic Laws and Concepts of Thermodynamics	85
13 The First Law of Thermodynamics. Energy Equation. Perfect Gas.	93
14 The Second Law of Thermodynamics. Entropy. Gibbs Identity.	98

15	Restrictions Imposed by The Laws of Thermodynamics on the Form of Constitutive Relationships.	100
16	Thermodynamics of Media with Internal Angular Momentum.	104
4	Discontinuity Surfaces in Continuum Media	109
17	Conditions across Discontinuity Surfaces.	109
18	Discontinuity Surfaces in the Lagrangian Description.	114
5	Fluid Mechanics	117
19	Summary of Equations of Fluid Mechanics	117
20	Statics of Fluid	119
21	Dynamics of an Incompressible Ideal Fluid	124
22	Dynamics of an Incompressible Viscous Fluid	142
23	Waves on a Surface of Heavy Incompressible Liquid	155
24	Mechanics of a Compressible Fluid	162
6	Elasticity Theory	179
25	Models of Elasticity Theory	179
26	Linearly Elastic Solid	184
27	Nonlinear Elasticity	205
28	Couple Elasticity and Averaging in Media with Microstructure	206
7	Inelastic Solids	215
29	Plastic Flow Theory	215
30	Rate-Dependent Effects in Solids	223
8	Basic Notions of Relativistic Kinematics and Dynamics. General Properties of Electromagnetic Field	227
31	Lorentz Transformations. Minkowski Space	227
32	Concepts of Relativistic Kinematics and Dynamics	230
33	Maxwell Equations	231
9	Models of Media Interacting with an Electromagnetic Field	237
34	Magnetohydrodynamics	237
35	Electrohydrodynamics	241
10	Dimensional Analysis and Modeling	245
36	Foundations of the Dimensionality Theory	245
37	Examples of the Application of Dimensional Analysis.	250
	Bibliography	259
