

# CONTENTS

<b>Preface</b>	<b>v</b>
<b>Chronology of the life of Sir Rudolf Ernst Peierls</b>	<b>ix</b>
<b>Acknowledgements</b>	<b>xxiii</b>
1. On the theory of galvanomagnetic effects ( <i>Z. Phys.</i> , <b>53</b> , 255–266, 1929)	1
2. On the theory of the Hall effect ( <i>Phys. Z.</i> , <b>30</b> , 273–274, 1929)	11
3. On the existence of stationary states ( <i>Z. Phys.</i> , <b>58</b> , 59–62, 1929)	12
4. On the kinetic theory of thermal conduction in crystals ( <i>Ann. Phys.</i> , <b>3</b> , 1055–1101, 1929)	15
5. On the theory of electric and thermal conductivity of metals ( <i>Ann. Phys.</i> , <b>4</b> , 121–148, 1930)	49
6. Two remarks on the theory of conductivity ( <i>Ann. Phys.</i> , <b>5</b> , 244–246, 1930)	69
7. Quantum electrodynamics in configuration space ( <i>Z. Phys.</i> , <b>62</b> , 188–200, 1930) (with L. Landau)	71
8. Extension of the Uncertainty Principle to relativistic quantum theory ( <i>Z. Phys.</i> , <b>69</b> , 56–69, 1930) (with L. Landau)	83
9. On the absorption spectra of solids ( <i>Phys. Z. Sowjetunion</i> , <b>1</b> , 297–298, 1932)	95
10. On the theory of the diamagnetism of conduction electrons ( <i>Z. Phys.</i> , <b>80</b> , 763–791, 1933)	97
11. On the theory of the diamagnetism of conduction electrons, II. Strong magnetic fields ( <i>Z. Phys.</i> , <b>81</b> , 186–194, 1933)	121
12. Remarks on the theory of metals ( <i>Z. Phys.</i> , <b>88</b> , 786–791, 1934)	127
13. On the statistical basis for the electron theory of metals ( <i>Helv. Phys. Acta</i> , <b>7</b> , Suppl. 2, 24–30, 1934)	132
14. Remarks on transition temperatures ( <i>Helv. Phys. Acta</i> , <b>7</b> , Suppl. 2, 81–83, 1934)	137
15. The “Neutrino” ( <i>Nature (London)</i> , <b>133</b> , 532–533, 1934) (with H. A. Bethe)	139
16. The Neutrino ( <i>Nature (London)</i> , <b>133</b> , 689–690, 1934) (with H. A. Bethe)	141

---

17. Quantum theory of the dipton ( <i>Proc. R. Soc. London</i> , <b>A148</b> , 146–156, 1935) (with H. A. Bethe)	142
18. The scattering of neutrons by protons ( <i>Proc. R. Soc. London</i> , <b>A149</b> , 176–183, 1935) (with H. A. Bethe)	154
19. Statistical error in counting experiments ( <i>Proc. R. Soc. London</i> , <b>A149</b> , 467–486, 1935)	162
20. Statistical theory of superlattices with unequal concentrations of the components ( <i>Proc. R. Soc. London</i> , <b>A154</b> , 207–222, 1936)	182
21. Note on the derivation of the equation of state for a degenerate relativistic gas ( <i>Mon. Not. R. Astron. Soc.</i> , <b>96</b> , 780–784, 1936)	198
22. Magnetic transition curves of supraconductors ( <i>Proc. R. Soc. London</i> , <b>A155</b> , 613–628, 1936)	203
23. Statistical theory of adsorption with interaction between the adsorbed atoms ( <i>Proc. Cambridge Philos. Soc.</i> , <b>32</b> , 471–476, 1936)	219
24. On Ising's model of ferromagnetism ( <i>Proc. Cambridge Philos. Soc.</i> , <b>32</b> , 477–481, 1936)	225
25. Penetration into potential barriers in several dimensions ( <i>Proc. R. Soc. London</i> , <b>A163</b> , 606–610, 1937) (with P. L. Kapur)	230
26. Heat conduction in liquid helium ( <i>Nature (London)</i> , <b>140</b> , 62–64, 1937) (with J. F. Allen and M. Zaki Uddin)	235
27. The dispersion formula for nuclear reactions ( <i>Proc. R. Soc. London</i> , <b>A166</b> , 277–295, 1938) (with P. L. Kapur)	239
28. On minimum property of the free energy ( <i>Phys. Rev.</i> , <b>54</b> , 918–919, 1938)	258
29. Nuclear reactions in the continuous energy region ( <i>Nature (London)</i> , <b>144</b> , 200–201, 1939) (with N. Bohr & G. Placzek)	260
30. Critical conditions in neutron multiplication ( <i>Proc. Cambridge Philos. Soc.</i> , <b>35</b> , 610–615, 1939)	264
31. Interpretation of beta-disintegration data ( <i>Nature (London)</i> , <b>143</b> , 200–202, 1939) (with H. A. Bethe and F. Hoyle)	270
32. The size of a dislocation ( <i>Proc. Phys. Soc.</i> , <b>52</b> , 34–37, 1940)	273
33. The Frisch-Peierls Memorandum of 1940 (in 2 parts): I. Appendix 1, M. Gowing, <i>Britain and Atomic Energy 1939–1945</i> , 1965); II. Ronald W. Clark, <i>Tizard</i> , 215–217, (1965).	277

- 
34. The Bohr theory of nuclear reactions (*Rep. Progr. Phys.*, **7**, 87–106, 1940) 283
  35. Separation of isotopes (DTA Rept. MS. 12A, 1941) (with K. Fuchs) 303
  36. On Lorentz invariance in the quantum theory (*Proc. Cambridge Philos. Soc.*, **38**, 193–200, 1942) (with P. A. M. Dirac & M. H. L. Pryce) 321
  37. The equation of state of air at high temperatures (DTA Rept. MS61, 1942) (with G. J. Kynch and T. H. R. Skyrme) 329
  38. Expansions in terms of sets of functions with complex eigenvalues (*Proc. Cambridge Philos. Soc.*, **44**, 242–250, 1948) 357
  39. The commutation laws of relativistic field theory (*Proc. R. Soc. London*, **A214**, 143–157, 1952) 367
  40. The polynutron theory of the origin of the elements (*Phys. Rev.*, **87**, 46–50, 1952) (with K. S. Singwi and D. Wroe) 383
  41. Properties of form factors in non-local theories (*Il Nuovo Cimento*, **10**, 668–676, 1953) (with M. Chrétien) 388
  42. A study of gauge-invariant non-local interactions (*Proc. R. Soc. London*, **A223**, 468–481, 1954) (with M. Chrétien) 397
  43. Field equations in functional form (*Proc. R. Soc. London*, **A224**, 24–33, 1954) (with S. F. Edwards) 411
  44. Note on the vibration spectrum of a crystal (*Proc. Nat. Inst. Sci. India*, **20**, 121–126, 1954) 421
  45. The coherent scattering of  $\gamma$ -rays by  $K$  electrons in heavy atoms. I. Method (*Proc. R. Soc. London*, **A227**, 51–58, 1954) (with G. E. Brown and J. B. Woodward) 427
  46. Interpretation and properties of propagators (*Int. Conf. nucl. and meson phys.* at Glasgow 1954, pp. 296–299). 435
  47. The Peierls Transition (*Quantum theory of solids*, sect. 5.3, O.U.P, 1955; *More surprises in theoretical physics*, 27–30, Princeton U.P. 1991) 439
  48. The collective model of nuclear motion, *Proc. Phys. Soc. London*, **A70**, 381–387, 1957 (with J. Yoccoz) 441
  49. Two-stage model of Fermi interactions (*Il Nuovo Cimento*, **10**, 520–524, 1958) (with N. Byers) 449
  50. Complex eigenvalues in scattering theory (*Proc. R. Soc. London*, **A253**, 16–36, 1959) 454

- 
51. Selected topics in nuclear theory (*Summer Inst. Theor. Phys.*, Univ. of Colorado, 1, 238–267 & 292–314, 1959) 475
  52. Velocity-dependent nuclear forces (*Proc. Rutherford Jubilee Conf.*, Manchester, 1961, pp. 739–741, 1961) 528
  53. Variational approach to collective motion (*Nucl. Phys.*, 38, 154–176, 1962) (with D. J. Thouless) 530
  54. The Villars formalism for nuclear rotation (*Proc. Phys. Soc. London*, 1, ser. 2, 1–10, 1968) (with J. N. Urbano) 553
  55. Time reversal and the second law of thermodynamics (*Conf. on Methods and Problems of Theoretical Physics*, Birmingham 1967, pp. 3–10) 563
  56. The momentum of a light wave in a refracting medium (*Proc. R. Soc. London*, A333, 149–156, 1973) (with M. G. Burt) 571
  57. Perturbation theory for projected states (*Proc. R. Soc. London*, A333, 157–170, 1973) 579
  58. The force on a moving charge in an electron gas (*J. Phys. Lond.*, C6, 2811–2821, 1973) (with A. K. Das) 593
  59. Perturbation theory for projected states, II. Convergence criteria and a soluble model (*Proc. R. Soc. London*, A335, 251–266, 1973) (with B. Atalay and A. Mann) 604
  60. Test of projected perturbation theory on a simplified model of  $H_2^+$  (*Chem. Phys. Lett.*, 24, 136–137, 1974) (with A. Mann) 620
  61. Some simple remarks on the basis of transport theory (*Transport Phenomena*, Proc. Sitges Intl. Schl. Stat. Mech., June 1974, 1–33) 622
  62. The force in electromigration (*J. Phys.* C8, 3348–3352, 1975) (with A. K. Das) 655
  63. The momentum of light in a refractive medium (*Proc. R. Soc. London*, A347, 475–491, 1976) 660
  64. Resonant states and their uses (*Nucl. Phys.*, A265, 443–460, 1976) (with G. Garcia-Calderon) 677
  65. Local approximation to a non-local potential (*Nucl. Phys.*, A343, 1–23, 1980) (with Nicole Vinh Mau) 695
  66. Model-making in physics (*Contemp. Phys.*, 21, 3–17, 1980) 718

---

67. The momentum of a sound pulse in a slightly dispersive medium ( <i>Proc. R. Soc. London</i> , <b>A390</b> , 1–12, 1983)	733
68. Momentum and pseudomomentum of light and sound ( <i>Highlights of condensed-matter theory</i> , Proc. Intl. Schl. Phys. “Enrico Fermi”, 89, 237–255, 1985)	745
69. Observations in quantum mechanics and the “collapse of the wave function” ( <i>Symposium on the Foundations of Modern Physics</i> , 187–196, 1985)	765
70. Shape of solitons in classically forbidden states: “Lorentz expansion” ( <i>Physica Scripta</i> , <b>33</b> , 282–283, 1986) (with F. Guinea and J. R. Schrieffer)	775
71. In defence of “measurement” ( <i>Phys. World</i> , <b>4</b> (1), 19–20, 1991)	778
72. Broken symmetries ( <i>Contemp. Phys.</i> , <b>33</b> , 221–226, 1992)	780
<b>Complete Bibliography for Sir Rudolf Peierls</b>	<b>787</b>
