Preface . . . . .	v
<b>1 The Ongoing Quest For Three-Manifold Invariants</b>	<b>1</b>
1.1 Volume as a Three-Manifold Invariant . . . . .	3
1.2 The Chern-Simons Invariant . . . . .	5
1.3 The $\eta$ -invariant . . . . .	6
1.4 The Chern-Simons Invariant Revisited . . . . .	7
1.5 Outlook and Summary . . . . .	10
1.6 References . . . . .	12
<b>2 Mapping Class Groups and 3-Manifold Invariants</b>	<b>14</b>
2.1 Markings on Riemann Surfaces . . . . .	15
2.2 Using the Knizhnik-Zamolodchikov Equation . . . . .	16
2.2.1 The Fusing Matrices . . . . .	18
2.2.2 The Braiding matrices . . . . .	18
2.2.3 The Switching Operators . . . . .	18
2.3 Mapping Class Group Representations . . . . .	20
2.4 The 3-Manifold Invariant $\Phi_K(M)$ . . . . .	21
2.5 References . . . . .	21
<b>3 Teichmüller Spaces and Mapping Class Groups</b>	<b>23</b>

3.0.1	The Moduli Space . . . . .	24
3.0.2	The Teichmüller Space . . . . .	24
3.0.3	Moduli Space and the Mapping Class Group . . . . .	24
3.1	The Interplay Between $\mathcal{M}_g$ , $\Gamma_g$ and $\mathcal{T}_g$ . . . . .	25
3.2	Fenchel-Nielsen Description of Teichmüller Spaces . . . . .	26
3.3	Homology of Moduli Spaces and Mapping Class Groups . . . . .	29
3.4	Algebraic Structures of the Mapping Class Group . . . . .	31
3.5	References . . . . .	33
<b>4</b>	<b>Mapping Class Groups and Arithmetic Groups</b>	<b>35</b>
4.1	Mapping Class Groups and Duality Groups . . . . .	36
4.2	Non-Arithmetic Mapping Class Groups . . . . .	37
4.3	How Stable Are Mapping Class Groups? . . . . .	38
4.4	Computing the Cohomology of Mapping Class Groups . . . . .	39
4.4.1	The First Two Betti Numbers of the Moduli Space . . . . .	40
4.4.2	Miller's Polynomial Algebra . . . . .	41
4.4.3	Comparison With $H^*(\mathrm{Sp}(2g; \mathbb{Z}); \mathbb{Q})$ . . . . .	42
4.4.4	Relations Among the $\kappa_i$ . . . . .	42
4.5	Homology of the Deligne-Mumford' Moduli Space $\overline{\mathcal{M}}_g^s$ . . . . .	44
4.6	Torsion in the Cohomology of the Mapping Class Group . . . . .	45
4.7	References . . . . .	46
<b>5</b>	<b>Weil-Petersson Geometry of Teichmüller Spaces</b>	<b>48</b>
5.1	Symplectic Geometry of the Weil-Petersson Form . . . . .	49
5.1.1	Weil-Petersson Metric in Fenchel-Nielsen Coordinates . . . . .	49
5.1.2	The Cosine Formula . . . . .	53
5.1.3	The Sine-Length Formula . . . . .	53
5.1.4	The Lie Bracket Formula . . . . .	53

5.2	Symplectic Geometry of Teichmüller Spaces . . . . .	54
5.2.1	Extension of the Weil-Petersson Metric to Deligne-Mumford Moduli Space . . . . .	56
5.2.2	How Rational is $\frac{1}{\pi^2} \bar{\omega}_{WP}$ ? . . . . .	56
5.2.3	The Complex Structure on the Teichmüller Space . . . . .	57
5.3	Projectivity of the Deligne-Mumford Moduli Space . . . . .	57
5.4	References . . . . .	59
<b>6</b>	<b>Gauge Theories on Riemann Surfaces I: Bundles</b>	<b>61</b>
6.1	Geometry of Fiber Bundles . . . . .	62
6.1.1	Non-Trivial Fiber Bundle: The Möbius Strip . . . . .	63
6.1.2	Trivial Bundles . . . . .	64
6.1.3	Sections of Fiber Bundles . . . . .	64
6.1.4	Pullback Bundles . . . . .	64
6.2	Vector Bundles . . . . .	65
6.2.1	Line Bundles . . . . .	66
6.2.2	Tangent and Cotangent Bundles . . . . .	66
6.2.3	Building Fiber Bundles . . . . .	67
6.2.4	Line Bundles Over Projective Spaces . . . . .	69
6.2.5	Principal Bundles . . . . .	70
6.2.6	Yang-Mills Instanton as Principal Bundle . . . . .	70
6.2.7	Dirac's Magnetic Monopole . . . . .	71
6.3	References . . . . .	72
<b>7</b>	<b>Gauge Theories on Riemann Surfaces II: Connections</b>	<b>74</b>
7.1	Connections on Vector Bundles . . . . .	75
7.2	Curvatures . . . . .	79
7.3	Torsions, Connections, and Tangent Bundles . . . . .	81

7.4	Connections on Various Bundles . . . . .	82
7.5	Connections On Principal Bundles . . . . .	84
7.6	References . . . . .	89
<b>8</b>	<b>Geometric Quantization of Chern-Simons-Witten Theories</b>	<b>90</b>
8.1	Holomorphic and Symplectic Structures on Bundles . . . . .	93
8.1.1	Holomorphic Structures on $\mathcal{L}$ . . . . .	94
8.1.2	Stability of Holomorphic Bundles . . . . .	96
8.1.3	Symplectic Geometry and Gauge Transformations . . . . .	96
8.1.4	Generalized Gauge Transformations on Symplectic and Holomorphic Structures . . . . .	99
8.2	Geometric Quantization of Chern-Simons-Witten Theories . . . . .	101
8.2.1	Canonical Spaces . . . . .	102
8.2.2	The Torus . . . . .	105
8.2.3	The Symplectic Quotient . . . . .	106
8.2.4	Non-Abelian Moduli Space of Representations . . . . .	107
8.3	Symplectic Quantization of 2-Dimensional Surfaces . . . . .	108
8.4	References . . . . .	112
<b>9</b>	<b>Deformation Quantization</b>	<b>113</b>
9.1	Aspects of Deformation Quantization . . . . .	114
9.1.1	Star-Product as Deformation Quantization . . . . .	115
9.1.2	Local and Global Characters of Deformation Quanti- zation . . . . .	118
9.1.3	Issues With Deformation Quantization . . . . .	119
9.2	Symplectic Degeneracy of Poisson Brackets . . . . .	122
9.3	Inducing Global Pathologies . . . . .	123
9.4	Occurrence and Manifestations of Global Anomalies . . . . .	124
9.5	$\star$ -Product and Anomalies . . . . .	126

9.6	Nondegenerate Symplectic Spaces . . . . .	128
9.7	Cancellation of Global Anomalies . . . . .	131
9.8	Global Anomalies Induced by the Jacobi Identity . . . . .	136
9.9	Generalized Wess-Zumino Consistency Condition . . . . .	141
9.10	References . . . . .	142
<b>10</b>	<b>Chiral and Gravitational Anomalies</b>	<b>145</b>
10.1	Spinor Representations of Lorentz Groups . . . . .	149
10.2	The Group Invariant $I_{\text{Tr}}$ . . . . .	152
10.3	The Green-Schwarz Anomaly Cancellation . . . . .	154
10.4	References . . . . .	160
<b>11</b>	<b>Anomalies and the Index Theorem</b>	<b>163</b>
11.1	The Index Theorem . . . . .	164
11.2	Characteristic Classes . . . . .	168
11.2.1	The Chern Character . . . . .	168
11.2.2	Hirzebruch Polynomial and Pontrjagin Classes . . . . .	169
11.3	The Index Theorem and Anomalies . . . . .	171
11.4	References . . . . .	180
<b>12</b>	<b>Global Anomalies</b>	<b>182</b>
12.1	An $SU(2)$ Global Gauge Anomaly . . . . .	182
12.2	Global Gravitational Anomalies . . . . .	185
12.2.1	A Case Study of the $N = 2, D = 10$ Supergravity Theory . . . . .	186
12.2.2	Global Gravitational Anomalies in the Heterotic String Theory . . . . .	194
12.2.3	Global Gravitational Anomalies in Some $D = 6$ Super- gravity Theories . . . . .	198

12.3	References . . . . .	203
<b>13</b>	<b>Mapping Class Groups and Global Anomalies</b>	<b>205</b>
13.1	The Smale-Hatcher Conjectures . . . . .	205
13.2	Mapping Class Groups For 3-Handlebodies . . . . .	207
13.2.1	Homeotopy Groups for 3-Handlebodies With One Bound- ary Component . . . . .	207
13.2.2	Homeotopy Groups of 3-Handlebodies With No Bound- ary Component . . . . .	217
13.2.3	A Presentation For $\Gamma_*$ In Terms of Dehn Twists . . . . .	221
13.3	Homeotopy Groups of Non-Proper 3-Manifolds . . . . .	224
13.3.1	Mapping Class Groups for $\Sigma_g \times [0, 1]$ With Two Bound- ary Components . . . . .	224
13.3.2	Mapping Class Groups of $\Sigma_g \times [0, 1]$ With One Bound- ary Component . . . . .	226
13.4	Global Anomalies and 3-Homeotopy Groups . . . . .	228
13.4.1	Global Gravitational Anomaly-Free Chern-Simons-Witten Theories . . . . .	232
13.5	References . . . . .	235
<b>14</b>	<b>Exotic Spheres</b>	<b>238</b>
14.0.1	Properties of Chern Classes . . . . .	239
14.0.2	Pontrjagin Classes . . . . .	241
14.1	Exotic Spheres . . . . .	246
14.2	References . . . . .	253
	Index . . . . .	255
