

CONTENTS

Preface	xix
Part I. Mushroom Biology	
Chapter 1. Introduction to Mushroom Biology	1
A. What are mushrooms	4
B. Where are mushrooms found	4
C. Importance of mushrooms	6
1. In nature	6
2. As food for man	6
3. As tonics and medicines	8
Part II. Concise Basics of Fungi as Background for Mushroom Biology	
Chapter 2. Classification	10
A. Various kingdoms	10
B. Distinguishing characteristics of various fungal taxons	10
C. Groups of fungi which produce mushrooms	12
Chapter 3. Biology of Fungi	14
A. Structure	14
1. Cellular organization	14
a. Filamentous fungi - the hypha	14
Organelles	15
Septa	17
Secondary mycelium of Basidiomycetes	17
Cell walls	20
Membranes	23
b. Unicellular fungi	24
2. Specialized vegetative structures	24
a. Appressoria	24
b. Haustoria	25

Contents

c. Sclerotia	25
d. Rhizomorphs	25
3. Specialized reproductive structures	25
a. Sexual	25
b. Nonsexual	29
B. Chemical composition of fungal cells	31
1. Chemical differences	31
2. Proximate values	32
3. Useful generalizations	33
4. Procedure for chemical analysis	35
C. Growth	36
1. Problems of measurement	36
2. Kinetics of growth	37
a. Unicellular forms	37
b. Mycelial fungi	38
3. Mycelial systems	38
a. Hyphal tip growth	38
b. Hyphal branching	39
c. Hyphal fusion	40
4. Nutritional requirements for growth	40
a. Essential elements	40
Oxygen	40
Carbon	41
Nitrogen	41
Sulfur	42
Phosphorus	42
Potassium	42
Magnesium	42
Trace elements	43
b. Vitamins	43
Thiamine	43
Biotin	44
Others	44
5. Physical requirements for growth and development	44
a. Hydrogen ion concentration	45
b. Temperature	45
c. Moisture	47
d. Light	47
e. Aeration	48
f. Gravity	48

Contents

6. Metabolism	49
a. Carbon	49
b. Respiration	50
c. Nitrogen	52
Amino acid biosynthesis	53
Nitrogen metabolites	53
7. Reproduction	53
a. Nonsexual	54
Reproductive methods	54
Heterokaryosis	55
Parasexuality	56
b. Sexual	57
Homothallism	57
Heterothallism	58
Hormonal control	59
c. By spores	60
8. Mode of nutrition in nature	63
a. Saprophytism	63
b. Parasitism	64
D. Genetics of fungi	65
1. Mutants as genetical markers	65
2. Genome karyotypes determined by pulsed field gel electrophoresis analysis	65
3. Mitochondrial genetics	66
4. Sexuality and mating reactions	67
a. Bipolar or unifactorial systems	68
b. Tetrapolar or bifactorial systems	69
c. Concept of primary homothallism	69
d. Basis of secondary homothallism in <i>Agaricus bisporus</i>	70
e. Formation of heterothallic fruiting bodies in bipolar systems	70
Pattern of <i>A. bitorquis</i> & <i>P. nameko</i>	71
f. Formation of heterothallic fruiting bodies in tetrapolar systems	72
Pattern of <i>S. commune</i> & <i>L. edodes</i>	72
Pattern of <i>Pleurotus</i> spp.	74
5. Mating type genes	76
6. Transformation in mushrooms	77
7. Parasexual process in mushrooms	77

Contents

8. Breeding of edible mushrooms	80
a. The empirical approach	80
b. Controlled genetic hybridization	81
c. Use of genetic markers	82

Part III. General Principles of Production of Mushrooms and Mushroom Products

Chapter 4. Introduction	86
Chapter 5. Mushroom Science	97
A. Definition	97
B. Contributing fields	97
1. Microbiology	97
2. Fermentation	98
3. Environmental engineering	98
C. Phases of Mushroom technology	99
1. Acceptable spawn	99
2. Selection of a fruiting culture	99
3. Development of spawn	99
4. Preparation of compost	100
5. Choice of proper spawn	101
6. Spawning	101
7. Spawn running	101
8. Mushroom development	101
9. Environmental engineering	102
10. Management and marketing	102
Chapter 6. Mushroom Biotechnology	103
A. Definition	103
B. Historical beginning	103
C. Applications of biotechnology	104
1. Bioconversion of organic wastes into edible protein	104
2. Spent compost	105
a. As fodder for livestock	105
b. As soil conditioner and fertilizer	106
c. In bioremediation	106
3. Medicinal components of mushrooms	107
a. Nutraceuticals	108
b. Nutriceuticals	108
c. Pharmaceuticals	109

Contents

4. Scientific studies suggested by observed medicinal properties	110
a. Anti-tumor	110
b. Anti-viral	114
c. Hypocholesterolemic	114
d. Antibiotic	115
e. Anti-inflammatory	115
f. Tonic	117

Part IV. Current Developments in Mushroom Biology

Chapter 7. Worldwide Trends Over the Past Decade	119
A. Introduction	119
B. Availability of more species of edible mushrooms in sizeable amounts	119
1. The "Big Six" mushrooms	119
2. The non "Big-Six" mushrooms	124
3. Total world production of mushrooms	124
a. <i>Pleurotus</i>	129
b. <i>Auricularia</i>	129
c. <i>Tremella</i>	130
d. <i>Flammulina</i>	130
C. Development of medicinals	130
1. Introduction	130
2. <i>Ganoderma lucidum</i>	130
3. <i>Coriolus versicolor</i>	131
4. <i>Lentinula edodes</i>	132
5. Other mushrooms	132
D. Cultivation techniques	133
1. Introduction	133
2. Developments in <i>Agaricus</i>	134
a. In Taiwan	134
b. In Indonesia	134
c. Composting	136
3. Cultivation of some specific mushrooms	136
a. <i>Morchella</i>	136
b. <i>Dictyophora</i>	137
c. <i>Hericium</i>	138
d. Efforts with mycorrhizal mushrooms	138

Contents

4. Improvements in bag cultivation	139
5. Centralized production of compost and marketing for small farms	140
E. Acceptance in Western world of more species	141
F. International Symposia	141
1. Establishment of concept of Mushroom Biology	141
a. Recognition of nutritional and medicinal value of mushrooms	141
Chapter 8. Current Activities	143
A. Selected applications in Mushroom Biology	143
1. Gains in <i>Pleurotus</i>	143
2. Specialty mushrooms in the United States	143
3. Regulation of fruiting - ecological and physiological studies	144
4. Improvement of mushroom strains	146
B. Applications in Mushroom Science	146
1. Bioconversion	147
2. Production	147
3. Upgrading of waste material utilization	148
C. Applications in Mushroom Biotechnology	149
1. Medicinals	149
2. Commercial production of enzymes	150
D. Additional Research Activities	151
1. Utilization of methods of Molecular Biology	151
a. Taxonomic studies - distinguishing species and strains	151
b. Demonstration of genetic variation in natural populations	152
c. Demonstration of genomic variation in germplasm collections	152
d. Linkage studies	153
e. Confirmation of crosses	153
f. Patent labeling	154
g. Breeding	154
2. Establishment of networks to advance the mushroom industry	154

Contents

E. Looking to the Future	155
1. Mushroom Science	156
2. Mushroom Biotechnology	156
Part V. Appendix	158
A. Basic information of specific mushrooms	158
B. 1994 figures on production of cultivated edible mushrooms	162
C. Protocol for obtaining <i>Ganoderma</i> quality products	164
References	166
