

CONTENTS

PREFACE	xv
LIST OF SYMBOLS	xvii
1 STATISTICAL MODELS	1
1.1 The Theory of Statistical Inference	1
1.2 Four Paradigms of Inference	3
1.3 Model Specification	6
1.3.1 Levels of Specification	8
1.3.2 Notes on the Specification of a Parametric Model	9
1.4 Parametric Statistical Models and Likelihood	11
1.4.1 General Formulation of a Statistical Model	11
1.4.2 Likelihood and Related Quantities	13
1.4.3 Reparameterizations	18
1.5 Examples of Likelihood Functions	21
1.6 Bibliographic Note	27
1.7 Problems	29
2 DATA AND MODEL REDUCTION	33
2.1 Introduction	33
2.2 Statistics	34
2.3 Distribution Constant Statistics	35
2.4 Sufficient Statistics	38
2.5 Completeness	44
2.6 Conditioning on Distribution Constant Statistics	46
2.7 Discussion and Examples	48
2.8 Ancillary Statistics	52
2.9 Relevant Subsets	56
2.10 Combinants and Pivotal Quantities	58

2.11	The Principle of Parameterization Invariance	60
2.11.1	Consequences for Parameter Estimation	61
2.11.2	Consequences for Hypothesis Testing	63
2.11.3	Uninformative Prior Distributions and Invariance	64
2.12	Bibliographic Note	66
2.13	Problems	67

3 SURVEY OF SOME BASIC CONCEPTS AND TECHNIQUES

		71
3.1	Introduction	71
3.2	Moments, Cumulants and their Generating Functions	72
3.2.1	The Moment Generating Function	72
3.2.2	The Characteristic Function	74
3.2.3	Convergence Results	76
3.2.4	Generating Functions for Sums	77
3.2.5	The Cumulant Generating Function	78
3.2.6	Infinitely Divisible, Stable, Selfdecomposable Laws	80
3.2.7	Multivariate Extensions	82
3.3	Basic Notions of Asymptotic Methods	84
3.3.1	Orders of Magnitude of Sequences	85
3.3.2	Convergence of Sums and Extremes	86
3.3.3	Orders in Probability: Examples	87
3.4	Likelihood and First-Order Asymptotic Theory	88
3.4.1	Null Asymptotic Distributions	89
3.4.2	Non-null Asymptotic Distributions	93
3.4.3	Robustness of Likelihood Methods	94
3.5	Inference in the Frequency-Decision Paradigm	99
3.5.1	General Framework	99
3.5.2	Point Estimation	101
3.5.3	Testing Hypotheses	104
3.5.4	Confidence Regions	109
3.5.5	Comments on the Relations with Likelihood Inference	110
3.6	The Empirical Distribution Function	110
3.6.1	Basic Properties	110
3.6.2	Nonparametric Maximum Likelihood Estimate	111
3.6.3	Statistical Functionals	112
3.7	Bibliographic Note	116
3.8	Problems	118

4	NUISANCE PARAMETERS AND PSEUDO-LIKELIHOODS	123
4.1	Nuisance Parameters	123
4.2	Data and Model Reduction with Nuisance Parameters	125
4.2.1	Lack of Information: No Nuisance Parameters	126
4.2.2	Lack of Information in the Presence of Nuisance Parameters	127
4.2.3	Weaker Concepts of Lack of Information with Nuisance Parameters	129
4.2.4	Nuisance Parameters and Reparameterizations	131
4.3	The Notion of a Pseudo-Likelihood	131
4.4	Marginal Likelihood: Examples	134
4.5	Conditional Likelihood: Examples	140
4.6	Profile Likelihood	143
4.7	Orthogonal Parameterization and Approximate Conditional Likelihood	148
4.8	Partial Likelihood	153
4.9	Quasi-Likelihood	157
4.10	Empirical Likelihood	159
4.11	Bibliographic Note	163
4.12	Problems	166
5	EXPONENTIAL FAMILIES	171
5.1	Introduction	171
5.2	Exponential Families of Order 1	172
5.3	Mean Value Mapping and Variance Function	176
5.4	Multiparameter Exponential Families	184
5.4.1	Definitions and Basic Results	184
5.4.2	Independence, Marginal and Conditional Distributions	188
5.5	Sufficiency and Completeness	194
5.6	Likelihood and Exponential Families	196
5.7	Profile Likelihood and Mixed Parameterization	197
5.8	Procedures with Finite-Sample Optimality Properties	201
5.8.1	Testing Hypotheses: One-Parameter Case	202
5.8.2	Testing Hypotheses: Multiparameter Case	203
5.9	First-Order Asymptotic Theory	208
5.10	Curved Exponential Families	211
5.11	Bibliographic Note	217

5.12	Problems	218
6	EXPONENTIAL DISPERSION FAMILIES AND GENERALIZED LINEAR MODELS	225
6.1	Introduction	225
6.2	Exponential Dispersion Families	226
6.3	Parameterization (μ, σ^2) and Convolution Properties	230
6.4	Generalized Linear Models	234
6.4.1	Likelihood and Sufficiency	236
6.4.2	Quasi-Likelihood	242
6.4.3	Deviance Tests	244
6.5	Generalized Linear Models for Binary Data	245
6.6	Bibliographic Note	252
6.7	Problems	253
7	GROUP FAMILIES	259
7.1	Introduction	259
7.2	Groups of Transformations	263
7.3	Orbits and Maximal Invariants	266
7.4	Simple Group Families	272
7.5	Composite Group Families	276
7.6	Inference in Simple Group Families	278
7.6.1	Data and Model Reduction	278
7.6.2	Likelihood and Scale and Location Families	282
7.7	Inference in Composite Group Families	289
7.7.1	Data and Model Reduction	289
7.7.2	Marginal Likelihood	293
7.8	Bibliographic Note	301
7.9	Problems	302
8	ASYMPTOTIC METHODS: INTRODUCTION AND ELEMENTARY TECHNIQUES	309
8.1	Introduction	309
8.2	Evaluating the Accuracy of an Approximation	312
8.2.1	Berry–Esséen Inequality	312
8.2.2	Other Methods for Evaluating the Accuracy of a Normal Approximation for a Fixed n	314
8.2.3	Chi-Squared Approximations	318

8.3	Improvements on First-Order Approximations: Historical Notes	320
8.4	Variance Stabilizing Transformations	324
8.5	Skewness Reducing Transformations	328
8.6	Bibliographic Note	331
8.7	Problems	332
9	ASYMPTOTIC EXPANSIONS FOR STATISTICS	335
9.1	Index Notation	335
9.2	Likelihood Quantities	342
9.2.1	Null Moments	343
9.2.2	Asymptotic Orders	344
9.3	Some Basic Tools	348
9.3.1	The Stochastic Taylor Formula	348
9.3.2	Inversion of Asymptotic Series	349
9.3.3	Laplace Expansion	352
9.4	Fundamental Asymptotic Expansions	357
9.4.1	Expansion of $\hat{\theta} - \theta$	357
9.4.2	Asymptotic Bias of $\hat{\theta}$	359
9.4.3	Variance and Other Cumulants of $\hat{\theta}$	361
9.4.4	Expansion of $l(\hat{\theta}) - l(\theta)$	364
9.4.5	Expansion of $E_{\theta}(W)$	365
9.4.6	Expansion of the Profile Score	367
9.5	Parameterization Invariance and Asymptotic Expansions	369
9.5.1	Tensors	370
9.5.2	Invariance of the Expansion of $l(\hat{\theta}) - l(\theta)$	371
9.5.3	Tensorial Behaviour of the Expansion of the Expected Value of the Profile Score	373
9.6	Bibliographic Note	374
9.7	Problems	376
10	ASYMPTOTIC EXPANSIONS FOR DISTRIBUTIONS	381
10.1	Generating Functions for a Standardized Sum	381
10.2	Hermite Polynomials	382
10.3	Edgeworth Expansion for Density Functions	384
10.4	Edgeworth Expansion for Distribution Functions	386
10.5	Anomalies in Edgeworth Approximations	392
10.6	Cornish–Fisher Expansion and Polynomial Normalizing Transformation	394

10.7	Saddlepoint Expansion for Density Functions	398
10.8	Lugannani–Rice Expansion for Distribution Functions	404
10.9	Multivariate Edgeworth and Saddlepoint Expansions	410
10.9.1	Multivariate Edgeworth Expansion	411
10.9.2	Multivariate Saddlepoint Expansion	412
10.9.3	Mixed Expansion	413
10.10	Asymptotic Expansions for Conditional Distributions	415
10.10.1	Three Methods	415
10.10.2	Exponential Families and Approximate Conditional Inference	418
10.11	Bibliographic Note	424
10.12	Problems	426
11	LIKELIHOOD AND HIGHER-ORDER ASYMPTOTICS	431
11.1	Introduction	431
11.2	Approximation for the Distribution of $\hat{\theta}$: the p^* Formula	432
11.3	Null Distribution of W	438
11.4	Effect of the Bartlett Correction	442
11.5	Modified Versions of Z and Z_p	446
11.6	Modified Profile Likelihood	455
11.7	Bibliographic Note	462
11.8	Problems	463
A	LAWS OF LARGE NUMBERS AND CENTRAL LIMIT THEOREMS	469
A.1	Sums of i.i.d. Random Variables	469
A.2	Sums of Independent Random Variables	471
A.3	Smooth Functions of Converging Sequences	472
A.4	Bibliographic Note	474
B	ASYMPTOTIC DISTRIBUTION OF EXTREMES	475
B.1	Basic Results	475
B.2	Bibliographic Note	476
B.3	Problems	477
C	PARAMETRIC INFERENCE: BASIC TERMINOLOGY	479
C.1	Point Estimation	479
C.2	Hypothesis Testing	479
C.3	Confidence Regions	480

D RELATIONS BETWEEN THE FREQUENCY-DECISION AND FISHERIAN PARADIGMS	483
REFERENCES	489
AUTHOR INDEX	521
SUBJECT INDEX	527
