

CONTENTS

Preface	v
1. Some Theoretical Applications to Organic Chemistry <i>Howard E. Zimmerman</i>	1
2. <i>Ab Initio</i> Studies of Elimination Reaction Mechanisms <i>Scott Gronert</i>	33
3. Computational Analyses of Prototype Carbene Structures and Reactions <i>Holger F. Bettinger, Paul v.R. Schleyer, Peter R. Schreiner and Henry F. Schaefer III</i>	89
4. Violations of Hund's Rule in Organic Diradicals — Where to Look for Violations and How to Identify Them <i>David A. Hrovat and Weston Thatcher Borden</i>	171
5. <i>Ab Initio</i> Methods for the Description of Electronically Excited States: Survey of Methods and Selected Results <i>Robert J. Cave</i>	197
6. Long-Range Intramolecular Interactions: Implications for Electron Transfer <i>Kenneth D. Jordan, Dana Nachtigallova and Michael N. Paddon-Row</i>	257
7. The Breathing Orbital Valence Bond Method <i>P. C. Hiberty</i>	289
Index	369
