Contents

Preface **xi**

Chapter 1: Introduction **1**

1.1 Basic Concepts in Pattern Recognition 1

1.2 Classifiers 3

1.3 Data Mining and Knowledge Discovery 9

1.4 References 11

Chapter 2: Decision Functions **19**

2.1 Basic Concepts 19

2.2 Linear Decision Functions 24

2.3 Generalized Decision Functions 32

2.4 Geometrical Discussion 36

2.4.1 Hyperplanes 36

2.4.2 Dichotomies 40

2.5 Orthogonal Functions 45

2.5.1 Univariate Functions 45

2.5.2 Multivariate Functions 49

Chapter 3: Classification by Distance Functions and Clustering **55**

3.1 Introduction 55

3.2 Minimum-Distance Classification 58

3.2.1 Single Prototypes 58

3.2.2 Multiprototypes 61

3.2.3 Nearest-Neighbor Classification (NN) 65
3.3 Clusters and Clustering 69
3.3.1 Threshold Order-Dependent Clustering Algorithm 70
3.3.2 The Max-Min Distance Method 73
3.3.3 *c*-Means Iterative Algorithm (CMI) 77
3.4 The ISODATA Algorithm 81
3.5 Clustering and Pattern Recognition 95
3.5.1 Evaluating the Clustering Results 96
3.5.2 Clustering as an Unsupervised Learning 98

Chapter 4: Classification Using Statistical Approach 99
4.1 Introduction 99
4.2 A General Bayes Classifier 106
4.3 Normally Distributed Patterns 118
4.3.1 The Univariate Normal Distribution 118
4.3.2 The Multivariate Normal Distribution 118
4.3.3 A Multiclass Multivariate Normal Distribution Problem 121
4.3.4 Error Probabilities 124
4.4 Estimation of Probability Density Functions 130
4.4.1 Form of the Density Function 130
4.4.2 Estimating the Mean Vector and Covariance Matrix 132
4.4.3 Estimation by Functional Approximation 135

Chapter 5: Feature Selection **141**

5.1 Introduction 141

5.2 Distance Measures 143

5.3 Clustering Transformations 147

5.4 Feature Selection by Entropy Minimization 153

5.5 Feature Selection Using Functional Approximation 157

Chapter 6: Fuzzy Classification and Pattern Recognition **167**

6.1 Fuzzy Sets Theory 167

6.1.1 Fuzzy Sets 168

6.1.2 The Extension Principle 176

6.1.3 Fuzzy Relations 177

6.2 Fuzzy and Crisp Classifications 181

6.3 Classification by Equivalent Relations 184

6.4 Fuzzy Clustering 192

6.4.1 Fuzzy c-Means Iterative Algorithm (FCMI) 196

6.4.2 Defuzzifying the Fuzzy Partition 201

6.4.3 Fuzzy Clustering and Fuzzy Similarity 202

6.4.4 Measuring the Fuzziness in a c-Fuzzy Partition 204

6.5 Fuzzy Pattern Recognition 211

6.5.1 Single Sample Identification 211

6.5.2 A Multi-Feature Pattern Recognition Problem 217

Chapter 7: Syntactic Pattern Recognition **227**

7.1 Introduction 227

7.2 Preliminaries 229

7.3 Grammar Types 237

7.4 The Syntactic Pattern Recognition Problem 242

7.5 Selecting Primitives 243

7.6 Syntax Analysis for Recognition 248

7.7 Stochastic Languages 252

Chapter 8: Neural Nets and Pattern Classification **255**

8.1 Introduction to Neural Networks 255

8.2 The McCulloch-Pitts Neuron 263

8.3 Simple Applications of the MP Neuron 266

8.4 Elementary Neural Nets for Pattern Classification 270

8.5 Hebb Net 275

8.6 The Perceptron 282

8.7 ADALINE 294

8.8 Backpropagation Neural Net and its Applications 298

Appendix **311**

Index **327**
