

Contents

Preface	ix
<i>Chapter 1</i>	
Development of the Chemistry and Macromolecular Structures of Proteins	1
<i>Chapter 2</i>	
Development of the Chemistry and Macromolecular Structures of Nucleic Acids	31
<i>Chapter 3</i>	
Carbodiimides as Synthetic Reagents	43
<i>Chapter 4</i>	
Phosphoric Acid Esters in Intermediary Metabolism: Development of Methods for Their Synthesis	97
<i>Chapter 5</i>	
Chemical Synthesis of Polynucleotides	159
<i>Chapter 6</i>	
Enzymes That Degrade Nucleic Acids	253
<i>Chapter 7</i>	
The Genetic Code: (A) Specificity in Protein Synthesis; the Transfer Ribonucleic Acids	269
<i>Chapter 8</i>	
The Genetic Code: (B) Basic Features and Codon Assignments	287
<i>Chapter 9</i>	
The Total Synthesis of Genes	393
<i>Chapter 10</i>	
Gene Amplification (PCR)	449

<i>Chapter 11</i>	
Bioenergetics: Bacteriorhodopsin, a Light-Driven Proton Pump	475
Selected Reviews and Published Lectures	577
<i>Autobiographical</i>	579
<i>Le Prix Nobel</i> , pp. 194–195 (1968)	
“From Carbodiimides to Gene Synthesis” (1981)	
Epilogue	619
