

## CONTENTS

<b>Preface</b>	v
<b>PART I. Theory of the interaction between atom and radiation field</b>	
<b>Chapter 1. Three pictures in quantum mechanics</b>	
1.1. The Schrödinger picture	3
1.2. The Heisenberg picture	8
1.3. The interaction picture	11
1.3.1. Equation of motion in the interaction picture	11
1.3.2. A formal solution of the state vector $ \Psi^I(t)\rangle$ by the perturbation theory	13
1.4. The density operator	15
1.4.1. Density operator and its general properties	16
1.4.2. Solution of the equation of motion for the density operator	20
<b>Chapter 2. Two-level atom and the optical Bloch equation</b>	
2.1. Two-level atom	25
2.2. Hamiltonian of a two-level atom interacting with an electromagnetic field	26
2.3. The optical Bloch equation	28
2.4. Description of the dynamical behavior of a two-level atom interacting with the radiation field by the density matrix	31
2.4.1. Density matrix equation describing a two-level atom without decay	32

2.4.2. Density matrix equation of a two-level atom with decay	34
<b>Chapter 3. Quantized description of radiation field</b>	
3.1. Classical description of the electromagnetic field in vacuum	37
3.2. Quantization of the radiation field	42
3.2.1. Quantization of the electromagnetic field	42
3.2.2. Momentum and spin of the photon	45
3.3. State functions describing the light field	48
3.3.1. Photon-number states	48
3.3.2. The coherent states of light	52
3.3.3. The phase operators and the phase states	60
3.3.4. Chaotic states of light	72
<b>Chapter 4. Dicke Hamiltonian and Jaynes-Cummings Model</b>	
4.1. Dicke Hamiltonian of an atom interacting with the radiation field	77
4.2. Spontaneous emission of an excited atom	82
4.3. The Jaynes-Cummings model	87
<b>Chapter 5. Quantum theory of a small system coupled to a reservoir</b>	
5.1. Classical Langevin equation and Fokker-Planck equation	93
5.1.1. Langevin equation	94
5.1.2. Fokker-Planck equation	98
5.2. Master equation for a quantum harmonic oscillator and a two-level atom	107
5.2.1. Master equation for a quantum harmonic oscillator	108
5.2.2. Master equation for a two-level atom coupled to a bath field	116
5.3. Characteristic function and the quasi-probability distribution for the quantum harmonic oscillator	118
5.3.1. Normal ordering representation	119
5.3.2. Anti-normal ordering representation	122
5.3.3. Symmetric ordering representation	125

**PART II. The quantum properties of light****Chapter 6. Coherence of light**

6.1. Classical coherence of light	135
6.1.1. Temporal coherence of light	135
6.1.2. Spatial coherence of light	137
6.1.3. The first-order correlation function	138
6.1.4. The higher-order correlation function	142
6.2. Quantum theory of the coherence of light	145
6.2.1. Quantum correlation functions	145
6.2.2. Bunching and antibunching effects of light	149
6.2.3. Intermode correlation property for the two-mode field	155

**Chapter 7. Squeezed states of light**

7.1. Squeezed states of a single-mode field	160
7.1.1. Squeezed coherent states	160
7.1.2. Squeezed vacuum field	176
7.2. Squeezed states of a two-mode radiation field	177
7.3. Higher-order squeezing of a radiation field and the amplitude square squeezing	185
7.3.1. Higher-order squeezing of a radiation field	185
7.3.2. Amplitude square squeezing	188
7.3.3. Independence of the different definitions of the squeezing for the radiation field	189
7.4. Squeezing of light in the Jaynes-Cummings model	190

**Chapter 8. Resonance fluorescence**

8.1. Resonance fluorescence distribution of a two-level atom	200
8.1.1. Dressed canonical transformation	200
8.1.2. Spectral distribution of the resonance fluorescence of a two-level atom	206
8.1.3. Linewidth of the fluorescence spectrum	209
8.1.4. Intensity distribution of the resonance fluorescence spectrum	214

8.2. Resonance fluorescence spectra of a three-level atom	222
8.2.1. Hamiltonian of a three-level atom under the interaction of a bimodal field	222
8.2.2. Resonance fluorescence spectrum of a three-level atom interacting with a strong and a weak monochromatic laser field	224
8.2.3. Resonance fluorescence spectral distribution of a three-level atom driven by two strong laser fields	230
8.3. Single-atom resonance fluorescence described by the density matrix theory	236

## Chapter 9. Superfluorescence

9.1. Elementary features of superfluorescence	247
9.2. Quasi-classical description of superfluorescence	251
9.3. Quantum theoretical description of superfluorescence	258
9.3.1. Heisenberg equation of the system	258
9.3.2. Dicke model for superfluorescence	263
9.3.3. Quantum statistical properties of superfluorescence	268
9.4. Superfluorescent beats	276
9.4.1. Basic characteristics of the superfluorescent beats	276
9.4.2. Superfluorescent beats in the Dicke model	278

## Chapter 10. Optical Bistability

10.1. Basic characteristics and the production mechanism of optical bistability	287
10.2. Quantum description of the dispersive optical bistability	294
10.2.1. Hamiltonian describing the optical bistability system	295
10.2.2. Optical bistability properties of the system	297

## Chapter 11. Effects of virtual photon processes

11.1. Relation between the Lamb shift of a Hydrogen atom and the virtual photon field	305
---	-----

◇ Contents	xiii
11.2. Influence of the virtual photon field on the phase fluctuations of the radiation field	311
11.2.1. Time evolution of the phase operator in the atom-field coupling system with the rotating-wave approximation	311
11.2.2. Time evolution of the phase operator without the rotating-wave approximation	315
11.3. Influences of the virtual photon processes on the squeezing of light	319
11.3.1. Squeezing of the field in the two-photon Jaynes-Cummings model with the rotating-wave approximation	320
11.3.2. Influences of the virtual photon processes on the squeezing of light	323

### **PART III. Quantum properties of atomic behavior under the interaction of a radiation field**

#### **Chapter 12. Collapses and revivals of atomic populations**

12.1. Time evolution of the atomic operator of a two-level atom under the interaction of a classical electromagnetic field	333
12.2. Periodic collapses and revivals of an atom interacting with a quantized field	336
12.2.1. Time development of atomic operators under the interaction of the field in a number state $ m\rangle$	337
12.2.2. Periodic collapses and revivals of the atom under the interaction of a coherent field	338
12.3. Periodic collapses and revivals of the atom in the two-photon Jaynes-Cummings model	347
12.4. Time evolution of the atomic operators for a three-level atom interacting with a single-mode field	351
12.4.1. Time evolution of the state vector of the system	351
12.4.2. Periodic collapses and revivals of the atomic populations	354

#### **Chapter 13. Squeezing effects of the atomic operators**

13.1. Definition of the atomic operator squeezing	361
---	-----

13.2. Squeezing of atomic operators in the two-photon Jaynes-Cummings model	365
13.2.1. Squeezing of atomic operators in the vacuum field	367
13.2.2. Squeezing of atomic operators in the superposition state field	372
13.2.3. Squeezing of atomic operators in the coherent state field	375
13.3. Squeezing of atomic operators in the resonance fluorescence system	377

#### Chapter 14. Coherent trapping of the atomic population

14.1. Atomic population coherent trapping and phase properties in the system of a V-configuration three-level atom interacting with a bimodal field	382
14.1.1. Time evolution of the state vector of the system	383
14.1.2. Time evolution of the phase operator in the atom-field coupling system	385
14.1.3. Coherent trapping of the atomic population	388
14.2. Coherent trapping of the atomic population for a V-configuration three-level atom driven by a classical field in a heat bath	392
14.2.1. Time evolution of the reduced density matrix $\rho$ of the atom	393
14.2.2. Steady-state behavior and the coherent trapping of the atomic populations	396

#### Chapter 15. Quantum characteristics of a two-atom system under the interaction of the radiation field

15.1. Hamiltonian of a two-atom system with the dipole-dipole interaction	401
15.1.1. Hamiltonian of the electric dipole-dipole interaction between two atoms	402
15.1.2. Hamiltonian of a two-atom system with the dipole-dipole interaction induced by the fluctuations of the vacuum field	403
15.2. Quantum characteristics of the two-atom coupling system under the interaction of a weak field	409
15.2.1. Time evolution of the atomic population inversion of a two-atom system	411
15.2.2. Influence of the dipole-dipole interaction on the squeezing of atomic operators	416

15.3. Periodic collapses and revivals and the coherent population trapping in the two-atom system under the interaction of a coherent field	420
15.3.1. Periodic collapses and revivals of atomic populations in the two-atom system	424
15.3.2. Atomic population coherent trapping in the two-atom coupling system	431

## Chapter 16. Autoionization of the atom in a laser field

16.1. Autoionization of the atom in a weak laser field	440
16.2. Autoionization of the atom under the interaction of a strong laser field	450
16.3. Above threshold ionization of the atom in a strong laser field	457
16.3.1. Influences of the second-order ionization processes on the low-energy photoelectron spectrum	464
16.3.2. Higher-energy photoelectron spectrum and the peak switching effect	466

## Chapter 17. Motion of the atom in a laser field

17.1. Atomic diffraction and deflection in a standing-wave field	472
17.1.1. State function of the system of an atom interacting with a standing-wave field	472
17.1.2. Diffraction of the atom under the interaction of a laser field	479
17.1.3. Deflection of the atom in a standing wave field	487
17.2. Force on an atom exerted by the radiation field	490
17.2.1. Quasi-classical description of the radiation force	492
17.2.2. Description of the radiative dipole force by means of the dressed state method	501

## Chapter 18. Laser cooling

18.1. Decelerating the motion of atoms by use of a laser field	521
18.2. Quantum theoretical description of the laser cooling	524
18.2.1. Hamiltonian describing the system of a polarization laser field interacting with a quasi-two-level atom	524

18.2.2. Time evolution of the density matrix elements of the atomic internal states	529
18.2.3. Radiation force acting on the atom by the laser field	535
18.2.4. Physical mechanism of the laser cooling	540
18.3. Limited temperature of the laser cooling	544
18.3.1. Atomic momentum diffusion in a laser field	544
18.3.2. Equilibrium temperature of the laser cooling	552
18.3.3. Laser cooling below the one-photon recoil energy by the velocity-selective coherent population trapping	554
<b>Index</b>	<b>559</b>
