

Contents

1	INTRODUCTION	1
1.1	Motion in phase space	1
1.2	Motion of a particle in one dimension	2
1.3	Flow in phase space	5
1.4	The action integral	8
1.5	The Maupertuis principle	12
1.6	The time	13
1.7	Fermat's principle	16
1.8	Chapter 1 problems	18
2	EXAMPLES OF PARTICLE MOTION	23
2.1	Central forces	23
2.2	Circular and quasi-circular orbits	25
2.3	Isotropic harmonic oscillator	26
2.4	The Kepler problem	27
2.5	The L-R-L vector	31
2.6	Open Kepler-Rutherford orbits	32
2.7	Integrability	34
2.8	Chapter 2 problems	36
3	FIXED POINTS, OSCILLATIONS, CHAOS	41
3.1	Fixed points	41
3.2	Small oscillations	44
3.3	Parametric resonance	47
3.4	Periodically jerked oscillator	50
3.5	Discrete maps, bifurcation, chaos	52
3.6	Chapter 3 problems	56

4	COORDINATE SYSTEMS	67
4.1	Translations and rotations	67
4.2	Some kinematics	71
4.3	Fictitious forces	71
4.4	Chapter 4 problems	73
5	RIGID BODIES	77
5.1	Angular momentum	77
5.2	Euler's equations	78
5.3	Euler angles	82
5.4	Spinning top	84
5.4.1	Regular precession of top	85
5.4.2	Sleeping top	86
5.4.3	Irregular precessions of top	87
5.5	Gyrocompass	89
5.6	Tilted disk rolling in a circle	91
5.7	Chapter 5 problems	93
6	LAGRANGIANS	101
6.1	Heuristic introduction	101
6.2	Velocity-dependent forces	103
6.3	Equivalent Lagrangians	105
6.4	Invariance of Lagrange equations	106
6.5	"Proofs" of the Lagrange equations	108
6.6	Constraints	110
6.7	Invariance of L and constants of motion	115
6.7.1	Invariance of L up to total time derivative	118
6.7.2	Noether's theorem	119
6.8	Chapter 6 problems	122
7	HAMILTONIANS	145
7.1	First look. 1	145
7.2	First look. 2	148
7.3	H as Legendre transform of L	152
7.4	Liouville's theorem	154
7.5	Cartan's vectors and forms	156
7.6	Lie derivatives	161
7.7	Time-independent canonical transformations	162
7.8	Generating functions	163
7.9	Lagrange and Poisson brackets	166
7.10	Hamilton-Jacobi equation revisited	168
7.11	Time-dependent canonical transformations	170

7.12	Time-dependent Hamilton-Jacobi equation	171
7.13	Stokes' theorem and some proofs	173
7.14	Hamiltonian flow as a Lie-Cartan group	175
7.15	Poincaré-Cartan integral invariant	178
7.16	Poincaré's invariants	181
7.17	Chapter 7 problems	182
8	ACTION-ANGLE VARIABLES	193
8.1	One dimension	193
8.2	Multiply periodic systems	196
8.3	Integrability, non-integrability, chaos	200
8.4	Adiabatic invariants	202
8.5	Outline of rigorous theory	204
8.6	Chapter 8 problems	206
9	PERTURBATION THEORY	213
9.1	The operator Ω	213
9.2	Perturbation expansions	215
9.3	Perturbed periodic systems	217
9.4	Chapter 9 problems	221
10	RELATIVISTIC DYNAMICS	227
10.1	Lorentz transformations	227
10.2	Dynamics of a particle	229
10.3	Formulary of Lorentz transformations	232
10.4	The spinor connection	238
10.5	The spin	241
10.6	Thomas precession	244
10.7	Charged particle in static em field	246
10.8	Magnetic moment in static em field	247
10.9	Lagrangian and Hamiltonian	248
10.10	Chapter 10 problems	253
11	CONTINUOUS SYSTEMS	261
11.1	Uniform string	261
11.2	Ideal fluids	268
11.3	Chapter 11 problems	275
	INDEX	283

List of Figures

1.1	Arbitrariness of p	2
1.2	Motion under the force $-kq$	3
1.3	Motion under the force $+kq$	3
1.4	Motion near potential energy extrema	4
1.5	Vertical motion under gravity	5
1.6	Elastic collision against a wall	6
1.7	Example of equation (1.14)	7
1.8	All trajectories in this figure correspond to the same values of p_x and p_y	11
1.9	Equation (1.34)	12
1.10	Real and varied motion under gravity	14
1.11	Illustration of Maupertuis principle	19
2.1	Isotropic harmonic oscillator	26
2.2	Eccentric anomaly	30
2.3	Rutherford orbits	32
2.4	L-R-L vector for Rutherford scattering	33
2.5	Quasi-circular orbits	37
2.6	Hénon-Heiles potential energy	39
3.1	Spiral attractor	43
3.2	Double pendulum	44
3.3	Instability zones	49
3.4	Stability zones for (3.40)	51
3.5	$x = \lim_{n \rightarrow \infty} x_n$ for logistic map	54
3.6	Lyapunov exponent for logistic map	55
3.7	Problem 3.8	57
3.8	Triatomic molecule	58
3.9	Problem 3.10	59
3.10	Escape from or approach to top position	59
3.11	Librational and rotational motion	60

3.12	Bead on rotating hoop	61
3.13	Triatomic molecule ($\lambda = 6$ and $\lambda = 12$)	64
4.1	Example of translation and rotation	68
4.2	Bug in tilted rotating pipe	75
5.1	Body-cone and space-cone	80
5.2	Euler angles	82
5.3	Spinning top	84
5.4	Graph of $P(u)$	85
5.5	Irregular precessions of top	87
5.6	Gyrocompass	89
5.7	Rolling disk	91
5.8	\hat{e}'_1 into page, $\hat{e}'_2 = \hat{b}_2$, $\hat{e}'_3 = \hat{b}_3$	91
5.9	Thumbtack	94
5.10	Double root of $P(u)$	96
6.1	Spherical pendulum	111
6.2	Bead on rotating wire	111
6.3	dq_i and δq_i	114
6.4	Block on accelerated cart	123
6.5	Problem 6.13	125
6.6	Cylinder rolling inside cylinder	126
6.7	Wheels and axle	127
6.8	Plank, problem 6.2	130
6.9	Electron and proton trajectories	133
7.1	Area of parallelogram	159
7.2	Volume of parallelepiped	159
7.3	Magnetostatic field example	178
7.4	Equation (7.63)	180
7.5	Problem 7.17	191
8.1	Ball bouncing up and down	194
8.2	Torus for Kepler motion	196
8.3	Particle in box	206
8.4	Kepler problem in three dimensions	206
8.5	Function $q(\phi)$, problem 8.2	209
10.1	Spin precession along circular orbit	245
10.2	Spin under sudden acceleration	254
11.1	Interpreting T_{xt}	263
