Preface		vii
PART I	THEORY AND APPLICATIONS OF DERIVATIVES MODELING	1
Chapter 1	Introduction to Counterparty Credit Risk	3
1.1	Credit Charge, Credit Benefit, and Credit Premium	8
1.2	Credit Cost, Accrued Funding Cost, and Accrued Funding Benefit	14
1.3	Trading Strategies and Opportunities	17
1.4	Comparison with Bond Credit Risk	28
1.5	Prevailing Strategies for Counterparty Credit Risk Management	30
1.6	Wrong-way and Right-way Exposures or Trades	33
1.7	Introduction to Modeling and Pricing of Counterparty Credit Risk	35
Chapter 2	Martingale Arbitrage Pricing in Real Market	37
2.1	Basics of Arbitrage	38
2.1.1	<i>Arbitrage Opportunity and Arbitrage Pricing</i>	38
2.1.2	<i>Self Financing Trading Strategies and Arbitrage</i>	42
2.2	Subtleties in Arbitrage Pricing in Real Market	45
2.2.1	<i>Counterparty Credit Risk</i>	45
2.2.2	<i>The Risk-free Interest Rate</i>	45
2.2.3	<i>Bid/Ask Spread</i>	49

2.2.4	<i>Un-hedgeable Variables</i>	51
2.2.5	<i>Primary Model Calibration and Secondary Model Calibration</i>	53
2.2.6	<i>Models for Pricing, Models for Hedging, and Hedging Calibration</i>	56
2.2.7	<i>Incomplete Market and Completing the Market</i>	60
2.3	<i>Arbitrage Models and Non-arbitrage Models</i>	61
2.3.1	<i>Arbitrage Models and Non-arbitrage Models</i>	61
2.3.2	<i>Financial Market Participants and Financial Activities</i>	63
2.4	<i>Trading Opportunities and Strategies</i>	66
2.4.1	<i>Simple Bonds and IR Swaps</i>	68
2.4.2	<i>Callable Bonds and Cancelable IR Swaps</i>	72
2.4.3	<i>Examples of Practical Complications</i>	73
2.4.4	<i>Structured Notes and Exotic Derivatives</i>	74
2.4.5	<i>IR/FX Hybrid Notes and Derivatives</i>	79
2.4.6	<i>Asset Swaps and Repackaging</i>	82
2.4.7	<i>Credit Hybrid Derivatives</i>	82
2.4.8	<i>Capital Structure Arbitrage</i>	84
2.4.9	<i>Quasi-arbitrage Opportunities</i>	86
2.4.10	<i>Why Should Derivatives Instruments Exist</i>	87
2.5	<i>Martingale Arbitrage Modeling</i>	89
2.5.1	<i>Harrison-Pliska Martingale No-arbitrage Theorem</i>	89
2.5.2	<i>Martingale Derivatives Pricing in a Binomial Economy</i>	91
2.5.3	<i>Harrison-Pliska Martingale No-arbitrage Theorem for Assets with Intermediate Cashflows or Income</i>	96
2.5.4	<i>Foundation for Arbitrage Pricing</i>	97
2.5.5	<i>Examples of Martingales and Equivalent Martingale Measures</i>	98
2.5.6	<i>Martingale Representation and SDE for Derivatives Pricing</i>	101
2.5.7	<i>Change of Probability Measure and Importance Sampling</i>	109
2.5.8	<i>PDE for Derivatives Pricing and P&L Decomposition</i>	113
2.5.9	<i>SABR Stochastic Volatility Model</i>	118
2.5.10	<i>An Example of Martingale Modeling in Real Market</i>	119
2.6	<i>Problems</i>	122

Chapter 3	The Black-Scholes Framework and Extensions	123
3.1	More on Martingale Models	123
3.1.1	<i>Single State Variable and Single Numeraire</i>	124
3.1.2	<i>Single State Variable and Multiple Numeraires</i>	133
3.2	Black's Model	142
3.3	Put-Call Parity Revised	143
3.4	Replication Model	147
3.5	Impact of Volatility Skews and Smiles on Hedge Ratios and Hedging Strategies	149
3.6	Other Extensions of Black-Scholes Framework	152
Chapter 4	Martingale Resampling and Interpolation	153
4.1	Martingale Interpolation	159
4.2	Brownian Bridge Interpolation	164
4.3	Moment Matching in One-factor Case	167
4.3.1	<i>Quadratic Resampling</i>	168
4.3.2	<i>Moment Matching for All Odd Moments and Kurtosis</i>	168
4.3.3	<i>Moment Matching for Higher Order Moments</i>	172
4.3.4	<i>Conditional Quadratic Resampling</i>	174
4.4	Moment Matching in Multi-factor Case	178
4.5	Martingale Resampling	180
4.5.1	<i>Unconditional Martingale Resampling at the State Variable Level</i>	181
4.5.2	<i>Conditional Martingale Resampling at the State Variable Level</i>	192
4.5.3	<i>Brownian Bridge Resampling at the State Variable Level</i>	197
4.5.4	<i>Martingale Control Variate at the Underlying Instrument Level</i>	198
4.5.5	<i>Martingale Resampling at the Derivatives Price Level</i>	200
4.5.6	<i>Application to Secondary Model Calibration</i>	202
4.6	Other Applications of Martingale Resampling	203
4.6.1	<i>Modeling of Multiple Indices</i>	204
4.6.2	<i>JLT Risk Neutralization of Credit Rating Transition Process</i>	205
4.6.3	<i>Calibration of Credit Spread Processes</i>	208
4.6.4	<i>Risk Neutralization of Mortgage Prepayment Model</i>	210
4.7	Accuracy and Precision Tests	210
4.8	Examples of Numerical Results	210

Chapter 5	Introduction to Interest Rate Term Structure Modeling	212
5.1	Interest Rate Models Classification	212
5.2	Short Rate Models	213
5.2.1	<i>Gaussian Short Rate Models</i>	214
5.2.2	<i>Lognormal Short Rate Models</i>	215
5.2.3	<i>Constant Elasticity of Variance Models</i>	215
5.3	Affine Models and Quadratic Models	215
5.4	What Interest Rate Models Should One Use?	216
Chapter 6	The Heath-Jarrow-Morton Framework	218
6.1	The Heath-Jarrow-Morton Model	218
6.2	The Ritchken-Sankarasubramanian Model	224
6.3	The Inui-Kijima Model	228
6.4	Overview of Numerical Implementations of the RS and the IK Model	234
6.4.1	<i>Recombining Trinomial Tree Technique</i>	234
6.4.2	<i>Adaptive Recombining Trinomial Tree Technique</i>	239
6.4.3	<i>Overview of Applications of the Adaptive Trinomial Tree Technique to the RS Model and the IK Model</i>	241
6.5	Appendix	242
6.5.1	<i>Closed-form Solutions for the RS Model</i>	242
6.5.2	<i>Closed-form Solutions for the IK Model</i>	246
Chapter 7	The Interest Rate Market Model	249
7.1	BGM Model versus HJM Model	250
7.2	The Brace-Gatarek-Musiela Original Approach	252
7.3	Comparison Between HJM and BGM Models	256
7.4	Jamshidian's Approach	258
7.5	Martingale Approach	259
7.5.1	<i>The LIBOR Market Model and the Black Formula for Caps/Floors</i>	259
7.5.2	<i>The Swap Market Model and the Black Formula for European Swaptions</i>	266
7.6	Overview of Simultaneous and Globally Consistent Pricing and Hedging	273
7.6.1	<i>Simultaneous Consistent Pricing Through Approximation</i>	275
7.6.2	<i>More on Simultaneous Consistent Pricing</i>	279

7.7	More on the Martingale or Full-dimensional LIBOR Market Model	283
7.8	Modeling Interest Rate Volatility Skew and Smile	287
7.8.1	<i>CEV and LCEV Models for Modeling the Volatility Skew</i>	288
7.8.2	<i>Examples of Volatility Skew for Caplets and Swaptions</i>	290
7.9	The Nonexploding Bushy Tree Technique	292
7.9.1	<i>Construction of a Nonexploding Bushy Tree</i>	294
7.9.2	<i>Modeling Stochastic Processes on a Nonexploding Bushy Tree</i>	297
7.9.3	<i>Application of Martingale Control Variate Technique</i>	301
7.9.4	<i>Numerical Results</i>	303
7.10	General Framework for Multi-factor Modeling for Hybrid Market	312
7.11	Stochastic Volatility BGM Models	314
7.12	Examples of Stochastic Volatility BGM Model Results	316
7.13	Appendix	317
7.13.1	<i>More Numerical Results Obtained With the NBT Technique</i>	317
7.13.2	<i>Sufficient Conditions for Convergence</i>	319
7.13.3	<i>Application of Girsanov's Change of Measure Theorem to Derivation of the Martingale or Full-dimensional LIBOR Market Model</i>	323
Chapter 8	Credit Risk Modeling and Pricing	327
8.1	Pricing Simple Defaultable Instruments	328
8.2	Default Contingent Instruments	334
8.3	A Simple Markov Chain Model	335
8.4	Modeling Correlated Default Event Processes with a Factor Model	341
8.5	Modeling Correlated Default Time Processes with the Copula Approach	348
8.6	Recovery Rate Modeling	350
8.7	Risky Market Model for Credit Spread Modeling	351
8.8	Joint Credit Spread and Default Modeling	359
8.9	Counterparty Credit Risk Pricing in OTC Derivatives	362
8.9.1	<i>Credit Charge Calculation</i>	365
8.9.2	<i>Expected and Potential Exposures and Expected Shortfall</i>	366
8.9.3	<i>Credit Benefit Calculation</i>	368

8.9.4	<i>Collateral or Margin Agreement</i>	369
8.9.5	<i>Net Credit Charge and Funding Spread Calculation</i>	370
8.9.6	<i>Martingale Relationships in Credit Charge Calculations</i>	372
8.9.7	<i>Closed-form Solutions and Approximations</i>	374
8.10	Framework for Counterparty Credit Risk Modeling and Pricing	378
8.10.1	<i>Centralized Market Process Modeling and Scenario Generation Engine</i>	380
8.10.2	<i>Exposure or MTM Modeling Engine</i>	380
8.10.3	<i>New Trade and Real-time Exposure or MTM Modeling Engine</i>	382
8.10.4	<i>Counterparty Credit Process Modeling and Scenario Generation Engine</i>	383
8.10.5	<i>Portfolio Effect Handling and Aggregation Engine</i>	383
8.10.6	<i>Counterparty Credit Risk Pricing Engine</i>	384
8.10.7	<i>Sensitivity and Scenario Analysis Engine</i>	384
8.10.8	<i>Unexpected Risk Modeling Engine</i>	385

PART II INTEREST RATE MARKET FUNDAMENTALS AND PROPRIETARY TRADING STRATEGIES 387

Chapter 9	Simple Interest Rate Products	389
9.1	Treasury Issues	389
9.1.1	<i>Treasury Bills</i>	389
9.1.2	<i>Treasury Notes and Bonds</i>	390
9.2	Futures Contracts	391
9.2.1	<i>Euro-dollars and LIBOR</i>	392
9.2.2	<i>Euro-dollar Futures</i>	392
9.2.3	<i>Note and Bond Futures</i>	393
9.3	Interest Rate Derivatives	394
9.4	Interest Rate Swaps	394
9.4.1	<i>Plain Vanilla Interest Rate Swap</i>	394
9.4.2	<i>Forward Swap</i>	395
9.4.3	<i>Basis Swap</i>	395
9.4.4	<i>Constant Maturity Swap</i>	395
9.4.5	<i>Swaption</i>	395
9.5	Bond Options	396
9.5.1	<i>OTC Options</i>	396

Chapter 10	Yield Curve Modeling	397
10.1	Introduction	397
10.2	The Bootstrap Method	398
10.3	Orthogonal Exponential Spline Model	399
10.3.1	<i>Exponential Basis Functions</i>	400
10.3.2	<i>Maximum Likelihood Estimates for Spline Coefficients</i>	403
10.3.3	<i>Implementation of the Spline Model</i>	405
10.3.4	<i>Summary</i>	406
10.4	Swap Curve	406
10.4.1	<i>Constructing Euro-dollar Strip Curve</i>	407
10.4.2	<i>Convexity Adjustment</i>	408
Chapter 11	Two-Factor Risk Model	411
11.1	PCA and TFRM Methodologies	411
11.2	Principal Components Analysis	413
11.3	Two-factor Risk Model Specification	418
11.4	Empirical Validation	421
11.5	Applications	423
11.5.1	<i>Level-hedged Bullet/Barbell Trades</i>	423
11.5.2	<i>Two-factor Portfolio Hedging Strategy</i>	423
11.5.3	<i>Bond Indices with Level and Curve Risk Profile</i>	426
11.6	Adjusted Durations	427
11.6.1	<i>β-Adjusted Duration</i>	430
11.6.2	<i>Hedging the Extremely Long End</i>	432
11.7	Future Directions	433
Chapter 12	The Holy Grail — Two-Factor Interest Rate Arbitrage	434
12.1	Profit, Loss, and Financing Costs	434
12.2	Two-factor Arbitrage	435
12.3	Trading Strategy	437
Chapter 13	Yield Decomposition Model	440
13.1	Volatility Adjusted Duration	441
13.2	Dollar Value of Convexity	442
13.3	Expected Total Rate of Return	443
13.4	Measurement of Risk Premium	444
13.5	Expectation Curve	445

13.6	Expected FED Funds Rate	447
13.7	Yield Decomposition Analysis	447
13.8	Discussion	448
Chapter 14 Inflation Linked Instruments Modeling		450
14.1	Inflation Swaps	451
14.2	Functions and Applications	452
14.2.1	<i>Asset/Liability Management</i>	453
14.2.2	<i>Inflation Swaps as Hedging and Trading Instruments</i>	453
14.2.3	<i>Investment Alternatives</i>	453
14.2.4	<i>Inflation Linked Debt Issuance</i>	454
14.2.5	<i>Complementary to Interest Rate Swaps</i>	454
14.3	Inflation Swap Level	455
14.4	Real Rate Swap Curve	456
14.5	Zero-coupon Inflation Swap Curve Valuation Methods	457
14.6	Risk Measures and Hedging	458
14.7	Prospect of the Inflation Swap Business	460
Chapter 15 Interest Rate Proprietary Trading Strategies		461
15.1	Rich/Cheap Trade	462
15.2	Rich/Cheap Analysis	464
15.2.1	<i>Yield Curve Sector Rich/Cheap Analysis</i>	464
15.2.2	<i>Rich/Cheap Analysis for Notes and Bonds</i>	466
15.3	Bond/Swap Trade	468
15.4	Curvature Trade	469
15.5	Spread Trade	470
15.6	Box Trade	472
15.7	OAT Floater Trade	472
15.8	Cash/Futures Trade	473
15.9	A Generic Convergence Trading Strategy	473
15.10	Other Factors Related to Trading Strategy	476
15.10.1	<i>Transaction Cost</i>	476
15.10.2	<i>Higher Risk and Highly Profitable Trades</i>	477
15.10.3	<i>Bet Big When All Components Line Up</i>	478
15.10.4	<i>Human Judgment</i>	478
